Manufacturing And Chemical Industries:

A History of the International Chemical Industry Fred Aftalion, 2001 Fred Aftalion's international perspective of the history of chemistry integrates the story of chemical science with that of chemical industry. This new edition includes events from 1990 to 2000 when major companies began selling off their divisions seeking to specialize in a particular business. Aftalion explores the pitfalls these companies encountered as well as the successes of contrarians: those companies that remained broad and diversified. He uses BASF, Dow, and Bayer as examples of true contrarians. **The Complete**

Technology Book on Chemical Industries NIIR Board, 2003-08-03 In modern age, chemical industries have permeated most extensively in comparison with other industries and are progressing at a very rapid pace. Chemical Industry in India is one of the fastest growing industries under the Indian economy. The chemical industry comprises the companies that produce industrial chemicals. Central to the modern world economy, it converts raw materials into more than 70,000 different products. Chemicals have contributed in various sectors like food industry, fertilizers, perfumery, fragrance, and flavour, etc. Chemicals are used to make a wide variety of consumer goods as well as thousands of inputs to agriculture, manufacturing, construction, and service industries. There are numerous chemicals produced in chemical industry, for example, chloroform, caffeine, fertilizers, dyes, drug intermediates, herbicide, inorganic salts, copper sulphate, acetaldehyde, etc. The chemical industry itself consumes 26 percent of its own output. The Chemical Industry in India is based on the idea of diversification. For example, inorganic chemicals is the sector where the growth rate is near about 9% and the chemicals produced in this sector are mainly used in alkalis, fertilizers, etc. Depending on the product categories, the chemical industry is divided in many other sectors like drugs and pharmaceuticals, fertilizers, fine chemicals like dyes and paints, etc. The chemical industry in India, which generates almost 13% of total national export, is growing annually at a growth rate anywhere between 10% and 12%. This book majorly deals with the molecular formula, raw materials, properties, laboratory testing, manufacturing process explained with flow diagrams and uses of the chemicals. The major contents of the book are inorganic salts, inorganic chemicals, industrial gas, fertilizers, alum, caffeine, ceramic chemicals, etc. This book covers the production of more than 100 chemicals, for example, acetanilide, methylamine, butylamine, linalol, phosphorous, salicylic acid, etc. This book should be of great value to young chemical engineers and chemists who are just entering the field, but those already practicing will find much of interest and use for broadening of their insight in to fields in which they are only marginally informed. It is hoped that this book will aid to young engineers, chemical, civil, mechanical, and electrical, as well as chemists, in understanding the value of chemical, the type of problems met in their production, and method for solving these problems.
