Information Modeling for Interoperable Dimensional Metrology Y Zhao, T Kramer, Robert Brown, Xun

Xu, 2011-08-28 Dimensional metrology is an essential part of modern manufacturing technologies but the basic theories and measurement methods are no longer sufficient for today's digitized systems The information exchange between the software components of a dimensional metrology system not only costs a great deal of money but also causes the entire system to lose data integrity Information Modeling for Interoperable Dimensional Metrology analyzes interoperability issues in dimensional metrology systems and describes information modeling techniques It discusses new approaches and data models for solving interoperability problems as well as introducing process activities existing and emerging data models and the key technologies of dimensional metrology systems Written for researchers in industry and academia as well as advanced undergraduate and postgraduate students this book gives both an overview and an in depth understanding of complete dimensional metrology systems By covering in detail the theory and main content techniques and methods used in dimensional metrology systems Information Modeling for Interoperable Dimensional Metrology enables readers to solve real world dimensional measurement problems in modern dimensional metrology practices **Optimizing Firm Performance**

Christian Faden, 2013-07-31 Academic research has identified several operational drivers in manufacturing companies that have an effect on either the physical production of goods or its distribution working capital requirements manufacturing performance supply chain performance and supply chain risk Despite the fact that these four operational drivers have been operationalized in empirical studies and theoretical discourses no one has yet conducted a holistic study of how they interrelate and what specific contribution they make to overall firm performance The key question addressed by this study is therefore how companies should align these operational drivers of excellence to achieve superior firm performance The results are based on a universe of 274 top class manufacturing companies based in Germany Switzerland or Austria and more than 15 interviews with top executives By consequence a trade off exists Strong firm performance requires a significant level of supply chain risk at the expense of working capital performance Companies that accept a reasonable level of supply chain risk while maintaining high manufacturing and supply chain performance outperform the lowest performing reference group by 14% in terms of sales sales growth profitability and market share firm performance *Mass Customized Manufacturing* Vladimir Modrak, 2017-02-17 This book brings several original contributions to research and practical applications in the field of mass customization from the designer manufacturer and customer perspectives respectively It presents advancements in

product design for mass customization design of assembly and supply chain processes variety induced complexity models complexity management marketing tools information systems to support decision making and critical success factors of this manufacturing and marketing strategy A special focus of interest is also on the use of product configurators in practice and sustainability assessment for mass customization strategy The aim is to disseminate current developments and approaches for further theoretical investigation and practical applications of mass customized manufacturing systems
