growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline. Accordingly, the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline.

Indigenous Justice Jennifer Hendry, Melissa L. Tatum, Miriam Jorgensen, Deirdre Howard-Wagner, 2018-05-18 This highly topical collection of essays addresses contemporary issues facing Indigenous communities from a broad range of multi and interdisciplinary perspectives. Drawing from across the social sciences and humanities, this important volume challenges the established norms, theories, and methodologies within the field and argues for the potential of a multidimensional approach to solving problems of Indigenous justice. Stemming from an international conference on Spaces of Indigenous Justice, Indigenous Justice is richly illustrated with case studies and comprises contributions from scholars working across the fields of law, socio-legal studies, sociology, public policy, politico-legal theory, and Indigenous studies. As such, the editors of this timely and engaging volume draw upon a wide range of experience to argue for a radical shift in how we engage with Indigenous studies.

The 17th and 18th Centuries Frank N. Magill, 2013-09-13 Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history. This is not a who's who. Instead, each entry provides an in-depth essay on the life and career of the individual concerned. Essays commence with a quick reference section that provides basic facts on the individual's life and achievements. The extended biography places the life and works of the individual within an historical context, and the summary at the end of each essay provides a synopsis of the individual's place in history. All entries conclude with a fully annotated bibliography.

Uprising Tiffany Lewis, 2021-02-01 Decades before white women won the right to vote throughout the United States, they first secured that right in its Western region, beginning in Wyoming in 1869. Many scholars have studied why and how the Western states enfranchised women before the Eastern ones; this book instead examines the influence of the West on the national US suffrage movement. As the campaign for woman suffrage intensified, US suffragists often invoked the West in their verbal, visual, and embodied advocacy. In deploying this region as a persuasive resource, they challenged the traditional meanings of the West and East, thus gaining additional persuasive strategies. Tiffany Lewis's analysis of the public discourse, images, and performances of suffragists and their opponents shows that the West played a pivotal role in the successful campaign for white women's enfranchisement that culminated in 1920. In addition to offering a history of this political movement's rhetorical strategy, Lewis illustrates the usefulness of region in protest: the way social movements can tactically employ region to motivate social change.

When Maps Become the World Rasmus Grønfeldt Winther, 2020-06-29 Map making and ultimately map thinking is ubiquitous across literature, cosmology, mathematics, psychology, and genetics. We partition, summarize, organize, and clarify our world via spatialized representations.

Our maps and more generally our representations seduce and persuade they build and destroy They are the ultimate record of empires and of our evolving comprehension of our world This book is about the promises and perils of map thinking Maps are purpose driven abstractions discarding detail to highlight only particular features of a territory By preserving certain features at the expense of others they can be used to reinforce a privileged position When Maps Become the World shows us how the scientific theories models and concepts we use to intervene in the world function as maps and explores the consequences of this both good and bad We increasingly understand the world around us in terms of models to the extent that we often take the models for reality Winther explains how in time our historical representations in science in cartography and in our stories about ourselves replace individual memories and become dominant social narratives they become reality and they can remake the world
