## Mapping Biology Knowledge:

**Mapping Biology Knowledge** K. Fisher, J. H. Wandersee, D. E. Moody, 2000-10-31 Mapping Biology Knowledge addresses two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for achieving this goal Meaning making and meaning building are examined from multiple perspectives throughout the book In many biology courses students become so mired in detail that they fail to grasp the big picture Various strategies are proposed for helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have in a given situation The metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These tools compared and contrasted in this book are also useful for building and assessing students content and cognitive skills The expanding role of computers in mapping biology knowledge is also explored Mapping Biology Knowledge K. Mintzes, James H. Wandersee, Joseph D. Novak, 2005-08-22 Recent government publications like Benchmarks for Scientific Literacy and Science for all Americans have given teachers a mandate for improving science education in America What we know about how learners construct meaning particularly in the natural sciences has undergone a virtual revolution in the past 25 years Teachers as well as researchers are now grappling with how to better teach science as well as how to assess whether students are learning *Assessing Science Understanding* is a companion volume to *Teaching Science for Understanding* and explores how to assess whether learning has taken place The book discusses a range of promising new and practical tools for assessment including concept maps vee diagrams clinical interviews problem sets performance based assessments computer based methods visual and observational testing portfolios explanatory models and national examinations **Handbook of Research on Science Education, Volume II** Norman G. Lederman, Sandra K. Abell, 2014-07-11 Building on the foundation set in Volume I a landmark synthesis of research in the field Volume II is a comprehensive state of the art new volume highlighting new and emerging research perspectives The contributors all experts in their research areas represent the international and gender diversity in the science education research community The volume is organized around six themes theory and methods of science education research science learning culture gender and society and science learning science teaching curriculum and assessment in science science teacher education Each chapter presents an integrative review of the research on the topic it addresses pulling together the existing research working to understand the historical trends and patterns in that body of scholarship describing how the issue is conceptualized within the literature how methods and theories have shaped the outcomes of the research and where the strengths weaknesses and gaps are in the literature Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research the *Handbook of Research on Science Education Volume II* is an essential resource for the entire science education community

**Creating Self-Regulated Learners** Linda B. Nilson, 2023-07-03 Most of our students neither know how learning works nor what they have to do to ensure it to the detriment both of their studies and their development as lifelong learners The point of departure for this book is the literature on self regulated learning that tells us that deep lasting independent learning requires learners to bring into play a range of cognitive skills affective attitudes and even physical activities about which

most students are wholly unaware and that self regulation which has little to do with measured intelligence can be developed by just about anyone and is a fundamental prerequisite of academic success Linda Nilson provides the theoretical background to student self regulation the evidence that it enhances achievement and the strategies to help students develop it She presents an array of tested activities and assignments through which students can progressively reflect on monitor and improve their learning skills describes how they can be integrated with different course components and on various schedules and elucidates how to intentionally and seamlessly incorporate them into course design to effectively meet disciplinary and student development objectives Recognizing that most faculty are unfamiliar with these strategies she also recommends how to prepare for introducing them into the classroom and adding more as instructors become more confident using them The book concludes with descriptions of courses from different fields to offer models and ideas for implementation At a time of so much concern about what our students are learning in college and how well prepared they are for the challenges of tomorrow s economy and society self regulated learning provides a reassuring solution particularly as studies indicate that struggling students benefit the most from practicing it

*Mapping Biological Ideas* Beat Adrian Schwendimann, 2011 Many students leave school with a fragmented understanding of biology that does not allow them to connect their ideas to their everyday lives Wandersee 1989 Mintzes Wandersee Mintzes Wandersee Thagard Tsui Duncan Hmelo Silver et al 2007 Research suggests that learners can hold a rich repertoire of co existing alternative ideas of evolution for example Bishop Demastes Good Evans 2008 especially of human evolution for example Nelson 1986 Sinatra et al 2003 Poling Wolpert 1994 Evans 2008 Research suggests that understanding human evolution is a key to evolution education for example Blackwell et al 2003 Besterman Linn et al 2004 is used as the operational framework to explore concept maps as knowledge integration tools to elicit add critically distinguish group connect and sort out alternative evolution ideas Concept maps are a form of node link diagram for organizing and representing connections between ideas as a semantic network Novak Cobb et al 2003 three iterative studies were implemented in ethnically and economically diverse public high schools classrooms using the web based inquiry science environment WISE Linn et al 2003 Linn et al 2004 Study 1 investigates concept maps as generative assessment tools Study 1A compares the concept map generation and critique process of biology novices and experts Findings suggest that concept maps are sensitive to different levels of knowledge integration but require scaffolding and revision Study 1B investigates the implementation of concept maps as summative assessment tools in a WISE evolution module Results indicate that concept maps can reveal connections between students alternative ideas of evolution Study 2 introduces KIMs as embedded collaborative learning tools After generating KIMs student dyads revise KIMs through two different critique activities comparison against an expert or peer generated KIM Findings indicate that different critique activities can promote the use of different criteria for critique Results suggest that the combination of generating and critiquing KIMs can support integrating evolution ideas but can be time consuming As

time in biology classrooms is limited study 3 distinguishes the learning effects from either generating or critiquing KIMs as more time efficient embedded learning tools Findings suggest that critiquing KIMs can be more time efficient than generating KIMs Using KIMs that include common alternative ideas for critique activities can create genuine opportunities for students to critically reflect on new and existing ideas Critiquing KIMs can encourage knowledge integration by fostering self monitoring of students learning progress identifying knowledge gaps and distinguishing alternative evolution ideas This dissertation research demonstrates that science instruction of complex topics such as human evolution can succeed through a combination of scaffolded inquiry activities using dynamic visualizations explanation activities and collaborative KIM activities This research contributes to educational research and practice by describing ways to make KIMs effective and time efficient learning tools for evolution education Supporting students building of a more coherent understanding of core ideas of biology can foster their life long interest and learning of science      Mapping Nanotechnology Innovations and Knowledge

Kinchin, 2016-07-27 This book puts the structure and function of knowledge firmly in the driving seat of university curriculum development and teaching practice Through the application of concept mapping the structure of knowledge can be visualised to offer an explicit perspective on key issues such as curriculum design student learning and assessment feedback Structural visualisation allows a greater scrutiny of the qualitative characteristics of knowledge so that we can analyse students patterns of learning and match them to expert practice Based on nearly two decades of research and direct observations of university teaching by the author this book aims to offer a scholarly account of teacher development It focusses on elements that will be of immediate utility to academics who want to develop their teaching to a level of adaptive experts offering them greater autonomy in their role and a powerful understanding of teaching to escape the repressive routines of the traditional classroom Rather than providing a comprehensive review of educational research this book provides a route through selected theories that can be explored in practice by university teachers on their own or in groups The book will help academics to identify the nature of powerful knowledge within their disciplines and consider ways that this may be used by students to become active and engaged learners through the manipulation and transformation of knowledge and so become expert students
