March 4 Scientists Students And Society:

March 4 Jonathan Allen,1970 **Disrupting Science** Kelly Moore,2013-12-15 Drawing extensively from archival sources and in depth interviews Kelly Moore examines the features of American science that made it an attractive target for protesters in the early cold war and Vietnam eras including scientists work in military research and activities perceived as environmentally harmful She describes the intellectual traditions that protesters drew from liberalism moral individualism and the New Left and traces the rise and influence of scientist led protest organizations such as Science for the People and the Union of Concerned Scientists Moore shows how scientist protest activities disrupted basic assumptions about science and the ways scientific knowledge should be produced and recast scientists relationships to political and military institutions

Jacket Scientists, Politics, and the Rhetoric of Public Controversy Pamela Pietrucci,Leah Ceccarelli,2025-09-01 This book examines how scientists around the world embrace their responsibility as citizens and how science is being used and abused by non scientists in public spaces As right wing politicians conspiracy theorists and modern robber barons assault science in the current moment it is time for the rhetoric of science to reconceptualize itself as a crisis care discipline The essays in this volume help us do that by scrutinizing particular cases of science activism examining the public modalities of resistance that scientists are increasingly taking up as they modify their public engagement to fit evolving rhetorical situations These essays also reveal how the authority of science is being distorted and exploited by non experts in ways that are more dangerous than ever in the shadow of climate change and global pandemics The book ends with a look at new possibilities for collaboration between local communities and scientists and a reflection on how a rhetorical conception of ethos can help us comprehend the negotiation of asymmetries between experts and laypeople in the current era Hubris and Hybrids Mikael Hård,Andrew Jamison,2013-09-13 Human societies have not always taken on new technology in appropriate ways Innovations are double edged swords that transform relationships among people as well as between human societies and the natural world Only through successful cultural appropriation can we manage to control the hubris that is fundamental to the innovative enterprising human spirit and only by becoming hybrids combining the human and the technological will we be able to make effective use of our scientific and technological achievements This broad cultural history of technology and science provides a range of stories and reflections about the past discussing areas such as film industrial design and alternative environmental technologies and including not only European and North American but also Asian examples to help resolve the contradictions of contemporary high tech civilization **Chain Reaction** Brian Balogh,1991-10-25 Path breaking research into the Atomic Energy Commission s internal memorandum files supports this text s explanation of how and why America came to depend so heavily on its experts after World War II and why their authority and political clout declined in the 1970s **A History of Science Policy in the United States, 1940-1985** ,1986 Centers of Learning Joseph Ben-David,2017-07-05 The universities of Britain France Germany and the United States stem from a common

European academic tradition and are today among the most influential and powerful in the world Each has cultivated a high degree of scientific and intellectual autonomy and has served as a model for world higher education Yet those four systems are structurally distinct and show considerably different patterns of development In *Centers of Learning* Joseph Ben David explores these differences and provides insight into the role and scope of contemporary higher education **Technology, Pessimism, and Postmodernism** Yaron Ezrahi, E. Mendelsohn, Howard Segal, 2013-03-07

HOWARD P SEGAL FOR THE EDITORS In November 1979 the Humanities Department of the University of Michigan's College of Engineering sponsored a symposium on Technology and Pessimism The symposium included scholars from a variety of fields and carefully balanced critics and defenders of modern technology broadly defined Although by this point it was hardly revolutionary to suggest that technology was no longer automatically equated with optimism and in turn with unceasing social advance the idea of linking technology so explicitly with pessimism was bound to attract attention Among others John Noble Wilford a New York Times science and technology correspondent not only covered the symposium but also wrote about it at length in the Times the following week As Wilford observed Whatever their disagreements the participants agreed that a mood of pessimism is overtaking and may have already displaced the old optimistic view of history as a steady and cumulative expansion of human power the idea of inevitable progress born in the Scientific and Industrial Revolutions and dominant in the 19th century and for at least the first half of this century Such pessimism he continued is fed by growing doubts about society's ability to rein in the seemingly runaway forces of technology though the participants conceded that in many instances technology was more the symbol than the substance of the problem **Scientists at War** Sarah Bridger, 2015-04-06 Sarah Bridger examines the ethical debates that tested the U S scientific community during the Cold War and scientists' contributions to military technologies and strategic policymaking from the dawning atomic age through the Strategic Defense Initiative Star Wars in the 1980s which sparked cross generational opposition among scientists **Noam Chomsky** Carlos Peregrín Otero, 1994 2 volumes **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1973 *The Missile Defense Controversy* Ernest Yanarella, 2010-09-12 This revised and updated edition identifies the cultural factors and specific administrative agendas that have shaped the way we view ballistic missile technology Three new sections connect our recent sudden shifts in foreign policy to ongoing historical patterns Whether cautioning against the almost neurotic pursuit of absolute security or examining the powerful influence of religion on military buildup Ernest J Yanarella uncovers the deeply ingrained attitudes that will determine the future of American missile defense **Science under Fire** Andrew Jewett, 2020-12-08 Americans have long been suspicious of experts and elites This new history explains why so many have believed that science has the power to corrupt American culture Americans today are often skeptical of scientific authority Many conservatives dismiss climate change and Darwinism as liberal fictions arguing that tenured radicals have coopted the sciences and other disciplines Some progressives especially in the universities worry that science's celebration of objectivity

and neutrality masks its attachment to Eurocentric and patriarchal values As we grapple with the implications of climate change and revolutions in fields from biotechnology to robotics to computing it is crucial to understand how scientific authority functions and where it has run up against political and cultural barriers Science under Fire reconstructs a century of battles over the cultural implications of science in the United States Andrew Jewett reveals a persistent current of criticism which maintains that scientists have injected faulty social philosophies into the nation's bloodstream under the cover of neutrality This charge of corruption has taken many forms and appeared among critics with a wide range of social political and theological views but common to all is the argument that an ideologically compromised science has produced an array of social ills Jewett shows that this suspicion of science has been a major force in American politics and culture by tracking its development varied expressions and potent consequences since the 1920s Looking at today's battles over science Jewett argues that citizens and leaders must steer a course between on the one hand the naive image of science as a pristine value neutral form of knowledge and on the other the assumption that scientists' claims are merely ideologies masquerading as truths

The Lost Promise Ellen Schrecker, 2021-12-17 The Lost Promise is a magisterial examination of the turmoil that rocked American universities in the 1960s with a unique focus on the complex roles played by professors as well as students The 1950s through the early 1970s are widely seen as American academia's golden age when universities well funded and viewed as essential for national security economic growth and social mobility embraced an egalitarian mission Swelling in size schools attracted new types of students and professors including radicals who challenged their institutions calcified traditions But that halcyon moment soon came to a painful and confusing end with consequences that still afflict the halls of ivy In The Lost Promise Ellen Schrecker our foremost historian of both the McCarthy era and the modern American university delivers a far reaching examination of how and why it happened Schrecker illuminates how US universities explosive growth intersected with the turmoil of the 1960s fomenting an unprecedented crisis where dissent over racial inequality and the Vietnam War erupted into direct action Torn by internal power struggles and demonized by conservative voices higher education never fully recovered resulting in decades of underfunding and today's woefully inequitable system As Schrecker's magisterial history makes blazingly clear the complex blend of troubles that disrupted the university in that pivotal period haunts the ivory tower to this day

The Cold War and American Science Stuart W. Leslie, 1993 Annotation New Scientist

Arguments that Count Rebecca Slayton, 2023-10-31 How differing assessments of risk by physicists and computer scientists have influenced public debate over nuclear defense In a rapidly changing world we rely upon experts to assess the promise and risks of new technology But how do these experts make sense of a highly uncertain future In Arguments that Count Rebecca Slayton offers an important new perspective Drawing on new historical documents and interviews as well as perspectives in science and technology studies she provides an original account of how scientists came to terms with the unprecedented threat of nuclear armed intercontinental ballistic missiles ICBMs She compares how two

different professional communities physicists and computer scientists constructed arguments about the risks of missile defense and how these arguments changed over time Slayton shows that our understanding of technological risks is shaped by disciplinary repertoires the codified knowledge and mathematical rules that experts use to frame new challenges And significantly a new repertoire can bring long neglected risks into clear view In the 1950s scientists recognized that high speed computers would be needed to cope with the unprecedented speed of ICBMs But the nation's elite science advisors had no way to analyze the risks of computers so used physics to assess what they could radar and missile performance Only decades later after establishing computing as a science were advisors able to analyze authoritatively the risks associated with complex software most notably the risk of a catastrophic failure As we continue to confront new threats including that of cyber attack Slayton offers valuable insight into how different kinds of expertise can limit or expand our capacity to address novel technological risks

The Rise of the Standard Model Lillian Hoddeson, Laurie Brown, Michael Riordan, Max Dresden, 1997-11-13 Editors Laurie Brown Max Dresden Lillian Hoddeson and Michael Riordan have brought together a distinguished group of elementary particle physicists and historians of science to explore the recent history of particle physics Based on a conference held at Stanford University this is the third volume of a series recounting the history of particle physics and offers the most up to date account of the rise of the Standard Model which explains the microstructure of the world in terms of quarks and leptons and their interactions Major contributors include Steven Weinberg Murray Gell Mann Michael Redhead Silvan Schweber Leon Lederman and John Heilbron The wide ranging articles explore the detailed scientific experiments the institutional settings in which they took place and the ways in which the many details of the puzzle fit together to account for the Standard Model

In the Shadow of the Bomb S. S. Schweber, 2013-10-31 How two charismatic exceptionally talented physicists came to terms with the nuclear weapons they helped to create In 1945 the United States dropped the bomb and physicists were forced to contemplate disquieting questions about their roles and responsibilities When the Cold War followed they were confronted with political demands for their loyalty and McCarthyism's threats to academic freedom By examining how J Robert Oppenheimer and Hans A Bethe two men with similar backgrounds but divergent aspirations and characters struggled with these moral dilemmas one of our foremost historians of physics tells the story of modern physics the development of atomic weapons and the Cold War Oppenheimer and Bethe led parallel lives Both received liberal educations that emphasized moral as well as intellectual growth Both were outstanding theoreticians who worked on the atom bomb at Los Alamos Both advised the government on nuclear issues and both resisted the development of the hydrogen bomb Both were in their youth sympathetic to liberal causes and both were later called to defend the United States against Soviet communism and colleagues against anti Communist crusaders Finally both prized scientific community as a salve to the apparent failure of Enlightenment values Yet their responses to the use of the atom bomb the testing of the hydrogen bomb and the treachery of domestic politics differed markedly Bethe who drew confidence

from scientific achievement and integration into the physics community preserved a deep integrity By accepting a modest role he continued to influence policy and contributed to the nuclear test ban treaty of 1963 In contrast Oppenheimer first embodied a new scientific persona the scientist who creates knowledge and technology affecting all humanity and boldly addresses their impact and then could not carry its burden His desire to retain insider status combined with his isolation from creative work and collegial scientific community led him to compromise principles and ironically to lose prestige and fall victim to other insiders S S Schweber draws on his vast knowledge of science and its history in addition to his unique access to the personalities involved to tell a tale of two men that will enthrall readers interested in science history and the lives and minds of great thinkers

The Visioneers W. Patrick McCray, 2013 In 1969 Princeton physicist Gerard O Neill began looking outward to space colonies as the new frontier for humanity's expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society's future needs could be met using self replicating nanoscale machines Patrick McCray traces how these visioneers and the communities they fostered blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future

Science in Resistance Fernando Racimo, 2025 Scientists around the world rise up for climate and ecological justice In April 2022 hundreds of scientists rose in civil disobedience breaking the law in more than twenty eight countries Risking arrest they glued their hands to roads blocked government and corporate buildings and chained themselves to the White House fence In *Science in Resistance* Fernando Racimo provides a first person account of the Scientist Rebellion a growing international movement of researchers stepping beyond conventional roles to alert the public about the need for action in the climate emergency Combining personal stories interviews with frontline activists and insights from research on direct action and academia he explores the challenges scientists face when taking a stand for climate and social justice Reflecting on his role as a scientist activist Racimo describes how he came to be involved in the movement He also explores the many ways in which academic institutions today are complicit in climate breakdown whether by accepting funding from and collaborating with the very industries driving it or by discouraging scientists from speaking up Drawing on lessons from political science psychology ecology sociology and the history of science he explains how academia can be transformed to become an actor for good in the emergency
