Subsymbolic Natural Language Processing Risto Miikkulainen, 1993 Risto Miikkulainen draws on recent connectionist work in language comprehension to create a model that can understand natural language Using the DISCERN system as an example he describes a general approach to building high level cognitive models from distributed neural networks and shows how the special properties of such networks are useful in modeling human performance In this approach connectionist networks are not only plausible models of isolated cognitive phenomena but also sufficient constituents for complete artificial intelligence systems Distributed neural networks have been very successful in modeling isolated cognitive phenomena but complex high level behavior has been tractable only with symbolic artificial intelligence techniques Aiming to bridge this gap Miikkulainen describes DISCERN a complete natural language processing system implemented entirely at the subsymbolic level In DISCERN distributed neural network models of parsing generating reasoning lexical processing and episodic memory are integrated into a single system that learns to read paraphrase and answer questions about stereotypical narratives Miikkulainen's work which includes a comprehensive survey of the connectionist literature related to natural language processing will prove especially valuable to researchers interested in practical techniques for high level representation inferencing memory modeling and modular connectionist architectures Risto Miikkulainen is an Assistant Professor in the Department of Computer Sciences at The University of Texas at Austin

Exercises in Rethinking Innateness Kim Plunkett, Jeffrey Elman, 1997-04-15 This book is the companion volume to Rethinking Innateness A Connectionist Perspective on Development The MIT Press 1996 which proposed a new theoretical framework to answer the question What does it mean to say that a behavior is innate The new work provides concrete illustrations in the form of computer simulations of properties of connectionist models that are particularly relevant to cognitive development This enables the reader to pursue in depth some of the practical and empirical issues raised in the first book The authors larger goal is to demonstrate the usefulness of neural network modeling as a research methodology The book comes with a complete software package including demonstration projects for running neural network simulations on both Macintosh and Windows 95 It also contains a series of exercises in the use of the neural network simulator provided with the book The software is also available to run on a variety of UNIX platforms

Rethinking Innateness Jeffrey L. Elman, 1996 Rethinking Innateness asks the question What does it really mean to say that a behavior is innate The authors describe a new framework in which interactions occurring at all levels give rise to emergent forms and behaviors These outcomes often may be highly constrained and universal yet are not themselves directly contained in the genes in any domain specific way One of the key contributions of Rethinking Innateness is a taxonomy of ways in which a behavior can be innate These include constraints at the level of representation architecture and timing typically behaviors arise through the interaction of constraints at several of these levels The ideas are explored through dynamic models inspired by a new kind of developmental connectionism a marriage of connectionist models and developmental neurobiology forming a new theoretical framework for the study of behavioral development While relying heavily on the conceptual and computational tools provided by connectionism Rethinking Innateness also identifies ways in which these tools need to be enriched by closer attention to biology

The Human Semantic Potential Terry Regier, 1996 Drawing on ideas from cognitive linguistics connectionism and perception The Human Semantic Potential describes a connectionist model that learns perceptually grounded semantics for natural language in spatial terms Languages differ in the ways in which they structure space and Regier's aim is to have the model perform its learning task for terms from any natural language The system has so far succeeded in learning spatial terms from English German Russian Japanese and Mixtec The model views simple movies of two dimensional objects moving relative to one another and learns to classify them linguistically in accordance with the spatial system of some natural language The overall

goal is to determine which sorts of spatial configurations and events are learnable as the semantics for spatial terms and which are not. Ultimately the model and its theoretical underpinnings are a step in the direction of articulating biologically based constraints on the nature of human semantic systems. Along the way Regier takes up such substantial issues as the attraction and the liabilities of PDP and structured connectionist modeling the problem of learning without direct negative evidence and the area of linguistic universals which is addressed in the model itself. Trained on spatial terms from different languages the model permits observations about the possible bases of linguistic universals and interlanguage variation.

Natural and Artificial Models in Computation and Biology Jose Manuel Ferrandez Vicente, Jose Ramon Alvarez Sanchez, Felix de la Paz Lopez, Fco. Javier Toledo Moreo, 2013-06-03. The two volume set LNCS 7930 and LNCS 7931 constitutes the refereed proceedings of the 5th International Work Conference on the Interplay between Natural and Artificial Computation IWINAC 2013 held in Mallorca Spain in June 2013. The 92 revised full papers presented in LNCS 7930 and LNCS 7931 were carefully reviewed and selected from numerous submissions. The first part LNCS 7930 entitled Natural and Artificial Models in Computation and Biology includes all the contributions mainly related to the methodological conceptual formal and experimental developments in the fields of neurophysiology and cognitive science. The second part LNCS 7931 entitled Natural and Artificial Computation in Engineering and Medical Applications contains the papers related to bioinspired programming strategies and all the contributions related to the computational solutions to engineering problems in different application domains specially Health applications including the CYTED Artificial and Natural Computation for Health CANS research network papers. In addition this two volume set reflects six interesting areas: cognitive robotics, natural computing, wetware computation, quality of life technologies, biomedical and industrial perception applications and Web intelligence and neuroscience.

Computational Linguistics in the Netherlands ..., 1998. De la science à la philosophie. Collectif, 2016-02-01. Dans une époque où sous la pression d'une spécialisation de plus en plus poussée les savoirs scientifiques ne savent même plus communiquer entre eux où le divorce est tabli entre la connaissance scientifique et la connaissance populaire où les enseignements de la raison et ceux de l'expérience et de l'intuition sont considérés comme mutuellement exclusifs c'est-à-dire vouloir jeter des ponts entre des domaines aujourd'hui cloisonnés. Vouloir faire dialoguer des cosmologistes et des physiciens des philosophes des psychanalystes des historiens des religions ou des spécialistes de la poésie mystique partir d'une interrogation commune paraît relever de la transgression. C'est pourtant ce que cet ouvrage réussit. Les interrogations qui rassemblent les divers intervenants sont les suivantes. Et si derrière la diversité des apparences derrière la multiplicité des disciplines et des méthodes il y avait quand même une unité fondamentale de la connaissance humaine. Et si une traversée transdisciplinaire de tous les champs du savoir conduite dans l'écoute mutuelle mais sans aucune complaisance et parfois dans la confrontation nous conduisait malgré tout vers un point d'unité si elle permettrait de réfléchir autrement de penser et de chercher autrement bref de construire une nouvelle raison et une nouvelle conception.
