Micro Architecture:

Processor Microarchitecture Antonio Gonzalez, Fernando Latorre, Grigorios Magklis, 2010-03-03 This lecture presents a study of the microarchitecture of contemporary microprocessors. The focus is on implementation aspects with discussions on their implications in terms of performance, power, and cost of state-of-the-art designs. The lecture starts with an overview of the different types of microprocessors and a review of the microarchitecture of cache memories. Then it describes the implementation of the fetch unit where special emphasis is made on the required support for branch prediction. The next section is devoted to instruction decode with special focus on the particular support to decoding x86 instructions. The next chapter presents the allocation stage and pays special attention to the implementation of register renaming. Afterward, the issue stage is studied. Here the logic to implement out-of-order issue for both memory and non-memory instructions is thoroughly described. The following chapter focuses on the instruction execution and describes the different functional units that can be found in contemporary microprocessors as well as the implementation of the bypass network which has an important impact on the performance. Finally, the lecture concludes with the commit stage where it describes how the architectural state is updated and recovered in case of exceptions or misspeculations. This lecture is intended for an advanced course on computer architecture suitable for graduate students or senior undergrads who want to specialize in the area of computer architecture. It is also intended for practitioners in the industry in the area of microprocessor design. The book assumes that the reader is familiar with the main concepts regarding pipelining, out-of-order execution, cache memories, and virtual memory.

Computers Amos R. Omondi, 2013-03-09 This book is intended to serve as a textbook for a second course in the implementation of the microarchitecture of computer architectures. The subject matter covered is the collection of techniques that are used to achieve the highest performance in single-processor machines; these techniques center on the exploitation of low-level parallelism, temporal and spatial, in the processing of machine instructions. The target audience consists of students in the final year of an undergraduate program or in the first year of a postgraduate program in computer science, computer engineering, or electrical engineering. Professional computer designers will also find the book useful as an introduction to the topics covered. Typically, the author has used the material presented here as the basis of a full semester undergraduate course or a half semester postgraduate course, with the other half of the latter devoted to multiple-processor machines. The background assumed of the reader is a good first course in computer architecture and implementation to the level in, say, *Computer Organization and Design* by D. Patterson and H. Hennessy, and familiarity with digital logic design. The book consists of eight chapters. The first chapter is an introduction to all of the main ideas that the following chapters cover in detail. The topics covered are the main forms of pipelining used in high-performance uniprocessors, a taxonomy of the space of pipelined

processors and performance issues It is also intended that this chapter should be readable as a brief stand alone survey

Architecture Description Languages Pierre Dissaux, Mamoun Filali Amine, Pierre Michel, Francois Vernadat, 2005-10-11 Architecture Description Languages is an essential reference for both academic and professional researchers in the field of system engineering and design The papers presented in this volume were selected from the workshop of the same name that was held as part of the World Computer Congress 2004 Conference held in Toulouse France in August 2004 This collection presents significant research and innovative developments and applications from both academic researchers and industry practitioners on topics ranging from Semantics to Tool and Development Environments The aim of an ADL is to formally describe software and hardware architectures Usually an ADL describes components their interfaces their structures their interactions structure of data flow and control flow and the mappings to hardware systems A major goal of such description is to allow analysis with respect to several aspects like timing safety reliability The papers in this state of the art volume cover such topics of interest as components connectors composition semantics and formalization verification simulation and test tools and development environments standardization industrial projects To encourage closer interaction between academic and industrial networking research communities the workshop welcomed academic research

papers as well as industrial contributions and both are included here Which makes this collection important not only for ADL experts and researchers but also for all teachers and administrators interested in ADL

In Detail, Small Structures Christian Schittich,2012-12-10 Shelters kiosks snack bars market stalls bus stops telephone booths toilets advertising columns ticket booths mobile tents or housing units emergency shelters tourist information booths this list of small autonomously functioning buildings could be expanded almost infinitely Small buildings shape our daily lives they are found at the nearest street corner they are present and indispensable but as architecture they attract our attention only rarely Yet these small structures occupy a definite place in the infrastructure of the city Rather than focusing on the large attractions of architecture architects find many potential ways to ensure the quality of everyday design hidden in these small sometimes charming necessities This volume in the DETAIL series spans the arc between architecture and product design since not infrequently small buildings are located precisely in the area of tension between these two professions and their successful realization is evident in the details of their construction

High Performance Embedded Architectures and Compilers Tom Conte,Nacho Navarro,Wen-mei W. Hwu,Mateo Valero,Theo Ungerer,2005-10-27 As Chairmen of HiPEAC 2005 we have the pleasure of welcoming you to the proceedings of the rst international conference promoted by the HiPEAC Network of Excellence During the last year HiPEAC has been building its clusters of researchers in computer architecture and advanced compiler techniques for embedded and high performance computers Recently the Summer School has been the seed for a fruitful collaboration of renowned international faculty and young researchers from 23 countries with fresh new ideas Now the conference promises to be among the premier forums for discussion and debate on these research topics The prestige of a symposium is mainly determined by the quality of its technical program This rst program lived up to our high expectations thanks to the large number of strong submissions The Program Committee received a total of 84 submissions only 17 were selected for presentation as full length papers and another one as an invited paper Each paper was rigorously reviewed by three Program Committee members and at least one external referee Many reviewers spent a great amount of effort to provide detailed feedback In many cases such feedback

along with constructive shepherding resulted in dramatic improvement in the quality of accepted papers. The names of the Program Committee members and the referees are listed in the proceedings. The net result of this team effort is that the symposium proceedings include outstanding contributions by authors from nine countries in three continents. In addition to paper presentations, this first HiPEAC conference featured two keynotes delivered by prominent researchers from industry and academia.

The SAMOS workshop is an international gathering of highly qualified researchers from academia and industry sharing in a 3 day lively discussion on the quiet and spiring northern mountainside of the Mediterranean island of Samos. As a tradition, the workshop features workshop presentations in the morning while after lunch all kinds of informal discussions and nut cracking gatherings take place. The workshop is unique in the sense that not only solved research problems are presented and discussed but also partly unsolved problems and in depth topical reviews can be unleashed in the scientific arena. Consequently, the workshop provides the participants with an environment where collaboration rather than competition is fostered. The earlier workshops SAMOS I-IV 2001-2004 were composed only of invited presentations. Due to increasing expressions of interest in the workshop, the Program Committee of SAMOS V decided to open the workshop for all submissions. As a result, the SAMOS workshop gained an immediate popularity: a total of 114 submitted papers were received for evaluation. The papers came from 24 countries and regions: Austria 1, Belgium 2, Brazil 5, Canada 4, China 12, Cyprus 2, Czech Republic 1, Finland 15, France 6, Germany 8, Greece 5, Hong Kong 2, India 2, Iran 1, Korea 24, The Netherlands 7, Pakistan 1, Poland 2, Spain 2, Sweden 2, Taiwan 1, Turkey 2, UK 2, and USA 5. We are grateful to all of the authors who submitted papers to the workshop.
