The Second Life of Natural Killer (NK) Cells Chiara Romagnani, Joseph C. Sun, Marco Colonna, 2018-07-16 Natural Killer NK cells are innate lymphocytes now recognized as members of a larger family of Innate lymphoid cells ILCs Both murine and human NK cells are well characterized effector cells with cytotoxic as well as cytokine production ability which mainly react in response to microbial and cell stress stimuli thus playing a central role in the defense against pathogen infection in tumor surveillance and in regulating immune homeostasis Despite these established concepts our understanding of the complexity of NK cells also in view of their developmental and functional relationship with other ILC subsets is only recently emerging This Research Topic highlights the recent advances in NK cell and ILC research in human and mouse from basic research to clinical applications

Immunity to Cancer Arnold Reif, 2012-12-02 Immunity to Cancer documents the proceedings of a conference on Immunity to Cancer held at Williamsburg Virginia September 10 12 1984 This was the first open conference since the New York Academy of Sciences meeting in 1975 that attempted to address the entire range of topics encompassed by tumor immunology and immunotherapy The papers presented in this volume were invited from experts in diverse areas of tumor immunology and closely related subjects There was an attempt to proceed logically from a consideration of the antigenicity of tumors and the use of monoclonal antibodies to examine specific antigens to a review of regulatory and effector mechanisms Immunological approaches to therapy were then considered systematically both for classical modes of immunotherapy and for the newly expanded categories of biological response modifiers or biomodulators Also included were papers on vaccination against cancer and on the analogy between the strategies for chemotherapy and immunotherapy

Mechanisms of Tumor Escape from the Immune Response A Ochoa, 2002-12-12 The progressive growth of a malignant tumor is accompanied by a decline in the immune response through mechanisms that have until recently been poorly understood The new era of biological therapies including cytokines adoptive transfer of TIL cells gene therapy and others brought forth the need to understand the impact of the tumor on the immune system Moreover the inability to achieve in humans the unequivocal success of immunotherapy in murine models suggests the possibility that cancer can impair the development of a therapeutic immune response Scientific and

technological advances in cellular and molecular biology during the last two decades have provided new tools with which to explore the dysfunctional immune system of patients with cancer Novel immunology concepts have provided new insights into changes occurring in tumor cells and the immune system providing a more cohesive understanding of the process including diminished or absent expression of HLA antigens and co stimulatory molecules arrested maturation of dendritic cells alterations in expression of some signal transduction proteins increased apoptosis in T and NK cells presence of suppressor CD 4 and CD25 T cells Mechanisms of Tumor Escape from the Immune Response provides an introduction to this rapidly developing and as yet unsettled area of cancer research and will be a valuable reference for clinicians and researchers working in the field of cancer immunotherapy Iron Metabolism at the Crossroad of Innate Immune Response and Cancer Progression Paola Zacchi,Michaela Jung,Stefania Recalcati,2022-02-15 **Nurse Anesthesia - E-Book** Sass Elisha,John J. Arosa,2018-01-25 Human CD8 T cells expressing NK receptors and receptors found on innate immune cells and designated as NK like or innate CD8 T cells have been long considered as terminally differentiated lymphocytes responsible for tissue inflammation and destruction However a growing body of knowledge is unveiling that NK like CD8 T cells have many sometimes contrasting functions The limited knowledge of the biology of this type of CD8 T cells and the role they play within peripheral tissues and organs under homeostatic conditions has hampered our understanding of disease and therefore the possible development of disease diagnostic tools and effective immunotherapies In this Research Topic are presented a variety of topics and views some of them overlooked for many years on human NK like CD8 T cells which may open new and novel avenues of research to further our understanding of these polyfunctional T cells *Diagnostic Pathology: Normal Histology - E-Book* Matthew R. In Memoriam of Professor Alessandro Moretta Eric Vivier,Daniel Olive,Chiara Romagnani,2020-05-21 *Stem Cell Therapy for Autoimmune Disease* Richard K. Burt,2019-11-11 Stem cell transplantation may be complicated by treatment

related mortality and like the immune system that it regenerates has equal potential to either create and preserve or destroy. The dual nature that defines stem cells is differentiation that ultimately leads to death and self renewal which leads to immortality. What types of stem cells are there? How are they collected? What are their attributes and characteristics? This textbook devotes many chapters to familiarize the reader with the basic science, clinical aspects and new questions being raised in the field of stem cell biology. Blood stem cells for tolerance and tissue regeneration are a rapidly developing research and clinical field that is being applied to autoimmune diseases. In clinical trials, autologous hematopoietic blood stem cells are being used to reduce the cytopenic interval following intense immune suppressive transplant regimens. While as yet not delineated, some possible mechanisms and pathways leading to tolerance after hematopoietic stem cell transplantation are suggested in these chapters. Tissue regeneration from blood stem cells is also suggested by animal experiments on stem cell plasticity or metamorphosis i.e. change in fate as described within this textbook. Ongoing early clinical trials on tissue regeneration from blood stem cells are described in the chapter on stem cell therapy for cardiac and peripheral vascular disease. Whether autologous hematopoietic stem cells through the process of mobilization and reinfusion may be manipulated to contribute to tissue repair in autoimmune diseases is a future area for translational research.
