not only among historical geographers but also among American economic historians and historians of religion **Dividing the Land** Edward T. Price, 1995-04-15 Many property lines drawn in early America still survive today and continue to shape the landscape and character of the United States Surprisingly though no one until now has thoroughly examined the process by which land was divided into private property and distributed to settlers from the beginning of colonization to early nationhood In this unprecedented study Edward T Price covers most areas of the United States in which the initial division of land was controlled by colonial governments the original thirteen colonies and Maine Vermont Kentucky West Virginia Tennessee Louisiana and Texas By examining different land policies and the irregular pattern of property that resulted from them Price chronicles the many ways colonies managed land to promote settlement develop agriculture defend frontiers and attract investment His analysis reveals as much about land planning techniques carried to America from Europe as innovations spurred by the unique circumstances of the new world Price's analysis draws on his thorough survey of property records from the first land plans in Virginia in 1607 to empresario grants in Texas in the 1820s This breadth of data allows him to identify regional differences in allocating land assess the impact of land planning by historical figures like William Penn of Pennsylvania and Lord Baltimore of Maryland and trace changes in patterns of land division and ownership through transfers of power among Britain the Netherlands France Spain Mexico and the Republic of Texas **Beyond the Basilica** Chad F. Kummer, 1992-06 The only quantitative deforestation study to focus on one country this case

analysis of the Philippines since 1946 yields more concrete data than previous cross national studies David Kummer's close examination of the interactions among political economic and cultural factors and their environmental consequences sheds light on similar situations in other countries **The Politics of Planting** Shaul Ephraim Cohen,1993-06 On the open landscape of Israel and the West Bank where pine and cypress forests grow alongside olive groves tree planting has become symbolic of conflicting claims to the land Palestinians cultivate olive groves as a vital agricultural resource while the Israeli government has made restoration of mixed growth forests a national priority Although both sides plant for a variety of purposes both have used tree planting to assert their presence on and claim to disputed land Shaul Ephraim Cohen has conducted an unprecedented study of planting in the region and the control of land it signifies In **The Politics of Planting** he provides historical background and examines both the politics behind Israel's afforestation policy its consequences Focusing on the open land surrounding Jerusalem and four Palestinian villages outside the city this study offers a new perspective on the conflict over land use in a region where planting has become a political tool For the valuable data it presents collected from field work previously unpublished documents and interviews and the insight it provides into this political struggle this will be an important book for anyone studying the Israeli Palestinian conflict **Isle of Fire** Christian A. Kull,2004-07-19 Long considered both best friend and worst enemy to humankind fire is at once creative and destructive On the endangered tropical island of Madagascar these two faces of fire have fueled a century long conflict between rural farmers and island leaders Based on detailed fieldwork in Malagasy villages and a thorough archival investigation **Isle of Fire** offers a detailed analysis of why Madagascar has always been aflame why it always will be aflame and ultimately as Christian Kull argues why it should remain aflame **American Capitals** Christian Montès,2014-01-10 State capitals are an indelible part of the American psyche spatial representations of state power and national identity Learning them by heart is a rite of passage in grade school a pedagogical exercise that emphasizes the importance of committing place names to memory But geographers have yet to analyze state capitals in any depth In **American Capitals** Christian Montès takes us on a well researched journey across America from Augusta to Sacramento Albany to Baton Rouge shedding light along the way on the historical circumstances that led to their appointment their success or failure and their evolution over time While all state capitals have a number of characteristics in common as symbols of the state as embodiments of political power and decision making as public spaces with private interests Montès does not interpret them through a single lens in large part because of the differences in their spatial and historical evolutionary patterns Some have remained small while others have evolved into bustling metropolises and Montès explores the dynamics of change and growth All but eleven state capitals were established in the nineteenth century thirty five before 1861 but rather astonishingly only eight of the fifty states have maintained their original capitals Despite their revered status as the most monumental and historical cities in America capitals come from surprisingly humble beginnings often plagued by instability conflict hostility and corruption Montès reminds us of the period

in which they came about an era of pioneer and idealized territorial vision coupled with a still evolving American citizenry and democracy Modeling Urban Growth in California's Central Valley Shumin Liang,2004 After a California Earthquake Risa Palm,Michael E. Hodgson,1992-04-15 Shortly before the Loma Prieta earthquake devastated areas of Northern California in 1989 Risa Palm and her associates had surveyed 2 500 homeowners in the area about their perception of risk from earthquakes After the quake they surveyed the homeowners again and found that their perception of risk had increased but that most respondents were fatalistic and continued to ignore self protective measures those who personally experienced damage were more likely to buy insurance A rare opportunity to analyze behavior change directly before and after a natural disaster this survey has implications for policy makers insurance officials and those concerned with risk management Parallel Patterns of Shrinking Cities and Urban Growth Rocky Piro,2016-05-06 Focussing particularly on urban fringe and rural areas this book addresses the parallel phenomena of growth and decline In doing so it not only broadens a debate which generally concentrates on urban municipalities especially inner city areas but also covers new ground by starting to build a new theoretical framework for the spatial planning related assessment of these phenomena Bringing together contributions from internationally renowned authors such as Sir Peter Hall Steve Ward and Johann Jessen the book compares international case studies and highlights their relationships with one another It concludes by emphasizing common themes that are addressed as well as showing applicability to other urban and rural regions Overall the book provides a timely and comprehensive analysis of the spatial consequences and related spatial planning concepts in theory and practice which aim to further sustainable development of city regions urban fringe and rural areas experiencing growth and decline **Environmental Amenities and Regional Economic Development** Todd L. Cherry,Dan Rickman,2009-12-04 Rising U S income and wealth in recent decades have fueled an increase in consumption demand for environmental amenities Many observers and researchers have argued that this at least in part underlies current differentials in economic growth across regions This collection of key articles addresses the issues and more **Guide to Programs of Geography in the United States and Canada** ,1991 **Research Paper** University of Chicago.
