Parsegian, 1970 **Natural Science**, 1898 **Ideas for a Hermeneutic Phenomenology of the Natural Sciences** J.J. Kockelmans, 2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science The ontological issues are discussed from a hermeneutic phenomenological point of view In addition the book contains critical discussions of basic themes raised by Carnap Hempel Stegmüller Kuhn Lakatos Heelan and Kisiel One of the basic theses developed in the book is that logical epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences Magazine of Natural History and Journal of Zoology, Botany, Mineralogy, Geology and Meteorology, 1829 **Introduction to the Science of Language** Archibald Henry Sayce, 1900 *Kant and the Transformation of Natural History* Andrew Cooper, 2023-08-02 Andrew Cooper presents the first systematic study of Kant s account of natural history Cooper contends that Kant made a decisive contribution to one of the most explosive and understudied revolutions in the history of science the addition of time to the frame in which explanations are required sought and justified in natural science

Through addressing a wide range of Kant's works Cooper challenges the claim that Kant's theory of science denies a developmental conception of nature and argues instead that it establishes a method by which natural historians can genuinely dispute historical claims and potentially come to consensus. This method, Cooper argues, can be used to expose serious flaws in Kant's own historical reasoning, including the formation and defence of his racist views. The book will be valuable to philosophers seeking to discern both the power and limitations of Kant's theory of science and to historians of science working on the fractured landscape of eighteenth-century Newtonianism.
