three sections 4 chapters each Section 1 presents an overview and history of natural resource management from both the North American and international perspectives Section 2 discusses the challenges facing Integrated Resource and Environmental Management IREM by examining issues such as conflict property rights the role of social science in natural resource management the influence and formation of power in a decision making context and the theoretical foundations of IREM Section 3 addresses the definition and application of IREM from several different contexts including real world applications and planning frameworks Individual case studies are integrated into the end of each chapter which serve to illustrate various models associated with IREM that demonstrate the advantages and challenges of using an IREM approach In addition discussion questions are included at the end of each chapter to stimulate dialogue underlying many of the issues presented in the text This book has been written for students primarily at the advanced undergraduate level in the many academic areas pertaining to natural resource management It provides a useful resource for practitioners researchers and managers currently involved in the field of natural resource management as well as providing a comprehensive aid for natural resource decision making within the context of the real world

Applying Ecosystem and Landscape Models in Natural Resource Management Robert E. Keane, 2019 Managing today's lands is becoming an increasingly difficult task Complex ecological interactions across multiple spatiotemporal scales create diverse landscape responses to management actions that are often novel counter intuitive and unexpected To make matters worse exotic invasions human land use and global climate change complicate this complexity and make past observational ecological studies limited in application to the future Natural resource professionals can no longer rely on empirical data to analyze alternative actions in a world that is rapidly changing with few historical analogs New tools are needed to synthesize the high complexity in ecosystem dynamics into useful applications for land management Some of the best new tools available for this task are ecological and landscape simulation models However many land management professionals and scientists have little expertise in simulation modeling and the costs of training these people will probably be exorbitantly high because most ecosystem and landscape models are exceptionally complicated and difficult to understand and use for local applications This book was written to provide natural resource professionals with the rudimentary knowledge needed to properly use ecological models and then to interpret their results It is based on the lessons learned from a career spent modeling ecological systems It is intended as a reference for novice modelers to learn how to correctly employ ecosystem landscape models in natural resource management applications and to understand subsequent modeling results
