Herb Ward, 2017-06-26 This book is open access under a CC BY NC 2 5 license The Gulf of Mexico is an open and dynamic marine ecosystem rich in natural resources but heavily impacted by human activities including agricultural industrial commercial and coastal development The Gulf of Mexico has been continuously exposed to petroleum hydrocarbons for millions of years from natural oil and gas seeps on the sea floor and more recently from oil drilling and production activities located in the water near and far from shore Major accidental oil spills in the Gulf are infrequent two of the most significant include the Ixtoc I blowout in the Bay of Campeche in 1979 and the Deepwater Horizon Oil Spill in 2010 Unfortunately baseline assessments of the status of habitats and biota in the Gulf of Mexico before these spills either were not available or the data had not been systematically compiled in a way that would help scientists assess the potential short term and long term effects of such events This 2 volume series compiles and summarizes thousands of data sets showing the status of habitats and biota in the Gulf of Mexico before the Deepwater Horizon Oil Spill Volume 2 covers historical data on commercial and recreational fisheries with an analysis of marketing trends and drivers ecology populations and risks to birds sea turtles and marine mammals in the Gulf and diseases and mortalities of fish and other animals that inhabit the Gulf of Mexico **Birdlife of the Gulf of Mexico** Joanna Burger, 2018-01-02 The Gulf of Mexico is one of the most important ecological regions in the world for birds The mosaic of diverse habitats in the region provides numerous niches for birds There are productive salt marshes barrier islands and sandy beaches for foraging and nesting a direct pathway between North and Central and South America for migrating and warm tropical waters for wintering Many species are residents all year around some migrate through and still others spend the winter along the shores The Gulf Coast is home to a significant portion of the world s population of Reddish Egret and Snowy Plover and a significant portion of the US breeding populations of certain birds including the Sandwich Tern Black Skimmer and Laughing Gull In total there are more than 400 bird species that rely on the Gulf at some time during the year Drawing on decades of fieldwork and data research renowned ornithologist and behavioral ecologist Joanna Burger provides detailed descriptions of birdlife in the Gulf of Mexico Burger records trends in bird population behavior and major threats

and stressors affecting birds in the region including the effects of the Deepwater Horizon oil spill in 2010 While some of this data exists in journal articles research papers and government reports this is the first volume to weave together a comprehensive overview of the birds and related natural resources found in the Gulf of Mexico Illustrated with over 900 color photographs charts and maps this landmark reference volume will be immensely important for researchers conservationists land managers birders and wildlife lovers
