

Characteristics of naturalistic inquiry

- Purposive sampling: try to choose a sample that gives you the widest range, to include as much information as possible (maximum variation sampling). Sampling is emergent; serial; continually focused and selected to the point of redundancy
- Inductive data analysis.
- Grounded theory: theory that emerges from the data and that “explains” the data. Negative case analysis
- Emergent design: “Tell me what questions I need to ask, and then answer them for me”. Emerges through continuous data analysis, interactions, peer debriefing, journals.

Naturalistic Inquiry:

Naturalistic Inquiry Yvonna S. Lincoln, Egon G. Guba, 1985-04 Showing how science is limited by its dominant mode of investigation Lincoln and Guba propose an alternative paradigm a naturalistic rather than rationalistic method of inquiry in which the investigator avoids manipulating research outcomes A paradigm shift is under way in many fields they contend and go on to describe the different assumptions of the two approaches regarding the nature of reality subject object interaction the possibility of generalization the concept of causality and the role of values The authors also offer guidance for research in the field where they say naturalistic inquiry always takes place Useful tips are given for example on designing a study as it unfolds establishing trustworthiness and writing a case report This book helps researchers both to understand and to do naturalistic inquiry Of particular interest to educational researchers it is valuable for all social scientists involved with questions of qualitative and quantitative methodology

Doing Naturalistic Inquiry David A. Erlandson, Edward L. Harris, Barbara L. Skipper, Steve D. Truth and Pluralism Nikolaj J.L.L. Pedersen, Cory D. Wright, 2013-02-14 The relative merits and demerits of historically prominent views about truth such as the correspondence theory coherentism pragmatism verificationism and instrumentalism have been subject to much attention and have fueled the long lived debate over which of these views is the most plausible While diverging in their specific philosophical commitments adherents of these views are in agreement in at least one fundamental

respect they are all alethic monists. They endorse the thesis that there is only one property in virtue of which propositions can be true and so in this sense take truth to be one. The truth pluralist on the other hand rejects this idea: there are several properties in virtue of which propositions can be true. The literature on truth pluralism has been growing steadily for the past twenty years. This volume however is the first to focus specifically on pluralism about truth. Part I is dedicated to the development, investigation and critical discussion of different forms of pluralism. One additional reason to examine truth pluralism is the significant connections it bears to other debates in the truth literature, particularly debates concerning traditional theories of truth and the deflationism/inflationism divide. Parts II and III of the volume connect truth pluralism to these two debates.

Evaluation Models George F. Madaus, M. Scriven, D.L. Stufflebeam, 2012-12-06. Attempting formally to evaluate something involves the evaluator coming to grips with a number of abstract concepts such as value, merit, worth, growth, criteria, standards, objectives, needs, norms, client, audience, validity, reliability, objectivity, practical significance, accountability, improvement, process, product, formative, summative, costs, impact, information, credibility, and of course with the evaluation itself. To communicate with colleagues and clients, evaluators need to clarify what they mean when they use such terms to denote important concepts central to their work. Moreover, evaluators need to integrate these concepts and their meanings into a coherent framework that guides all aspects of their work. If evaluation is to lay claim to the mantle of a profession, then these conceptualizations of evaluation must lead to the conduct of defensible evaluations. The conceptualization of evaluation can never be a one-time activity nor can any conceptualization be static. Conceptualizations that guide evaluation work must keep pace with the growth of theory and practice in the field. Further, the design and conduct of any particular study involves a good deal of localized conceptualization.

The Routledge Handbook of Liberal Naturalism Mario De Caro, David Macarthur, 2022-03-14. The central question of naturalism, the relation of philosophy to science, was one of the defining strands of twentieth-century thought and remains a major source of debate and controversy. Today many argue that philosophy should fold itself into the sciences, especially the natural sciences. Liberal naturalists argue that such scientific naturalism demands reductive and Procrustean conceptions of knowledge and reality. Moreover, many philosophical problems are beyond the scope of the sciences, such as the nature of persons, the normativity of the space of reasons, and how best to understand the peculiar mix of objectivity and subjectivity of ethics and art. *The Routledge Handbook of Liberal Naturalism* is the first collection to present a comprehensive overview of liberal naturalism, a philosophical outlook that lies between scientific naturalism and supernaturalism. Comprising 37 chapters by an international team of contributors, it examines important cutting-edge topics including what liberal naturalism is, metaphysics, a viable project, naturalism in the history of philosophy, including Hume, Dewey, and Quine, contemporary liberal naturalists such as P. F. Strawson, John McDowell, Hilary Putnam, and John Rawls, related kinds of naturalism including subject naturalism, common sense naturalism, and biological naturalism, the bearing of liberal naturalism on contemporary debates in epistemology, philosophy of mind,

ethics and aesthetics Essential reading for students and researchers in all areas of philosophy this volume will be of particular interest for those studying philosophical naturalism philosophy of science metaphysics epistemology philosophy of mind ethics and aesthetics

Constructivism and the Metaphysics of Qualitative Research John Paley, 2024-09-30 This book challenges the widespread assumption that a necessary preliminary to qualitative research is the formulation of ontological and epistemological beliefs It argues that the metaphysical claims which supposedly underpin different approaches to social research do not make sense Literally Sentences such as There is a single objective reality and There are multiple constructed realities fail to make information providing statements They do not refer or describe Despite appearances they say nothing about reality or realities at a fundamental level so they cannot be used to justify ground or align with methodological decisions The necessary preliminary turns out not to be necessary at all and we can dispense with not just paradigms but metaphysical underpinnings in general whether structured as paradigms or not Drawing on Wittgenstein's later philosophy Carnap's metametaphysics and contemporary linguistics the book suggests that the metaphysical claims of qualitative texts can be reinterpreted as performative Ontological and epistemological beliefs are resolutions and proposals recommendations for the use of language They form part of a creed by means of which researchers enact the joining of an academic community Written in Paley's trademark clear accessible and conversational style the book points to a revolution in our understanding of the relation between metaphysics and social research It will be essential reading for anyone interested in qualitative research and its philosophical foundations

Social Work Research and Evaluation Elizabeth DePoy, Stephen Gilson, 2016-06-20 Social Work Research and Evaluation applies systematically developed research knowledge to social work practice and emphasizes the doing of social work as a reciprocal avenue for generating research evidence and social work knowledge Using the Examined Practice Model authors Elizabeth G DePoy and Stephen F Gilson present research as the identification of a problem and then proceed to evaluate the efficacy of social work practice in its resolution Diverse theories actions and sets of evidence from a range of professional and disciplinary perspectives are included to underscore the importance of integrating evaluation and practice in research

Qualitative Research & Evaluation Methods Michael Quinn Patton, 2023-02-07 Drawing on more than 40 years of experience conducting applied social science research and program evaluation author Michael Quinn Patton has crafted the most comprehensive and systematic book on qualitative research and evaluation methods inquiry frameworks and analysis options available today Now offering more balance between applied research and evaluation this Fourth Edition illuminates all aspects of qualitative inquiry through new examples stories and cartoons more than a hundred new summarizing and synthesizing exhibits and a wide range of new highlight sections sidebars that elaborate on important and emergent issues For the first time full case studies are included to illustrate extended research and evaluation examples In addition each chapter features an extended rumination written in a voice and style more emphatic and engaging than traditional textbook style about a core issue of
