Nature's Frontiers Richard Damania, Stephen Polasky, Mary Ruckelshaus, Jason Russ, Markus Amann, Rebecca Chaplin-Kramer, James Gerber, Peter Hawthorne, Martin Philipp Heger, Saleh Mamun, Giovanni Ruta, Rafael Schmitt, Jeffrey Smith, Adrian Vogl, Fabian Wagner, Esha Zaveri, 2023-04-14 The great expansion of economic activity since the end of World War II has caused an unprecedented rise in living standards but it has also caused rapid changes in earth systems Nearly all types of natural capital the world's stock of resources and services provided by nature are in decline Clean air abundant and clean water fertile soils productive fisheries dense forests and healthy oceans are critical for healthy lives and healthy economies Mounting pressures however suggest that the trend of declining natural capital may cast a long shadow into the future Nature's Frontiers Achieving Sustainability Efficiency and Prosperity with Natural Capital presents a novel approach to address these foundational challenges of sustainability A methodology combining innovative science new data sources and cutting edge biophysical and economic models builds sustainable resource efficiency frontiers to assess how countries can sustainably use their natural capital more efficiently The analysis provides recommendations on how countries can better use their natural capital to achieve their economic and environmental goals The report indicates that significant efficiency gaps exist in nearly every country Closing these gaps can address many of the world's pressing economic and environmental problems economic productivity health food and water security and climate change Although the approach outlined in this report will entail demanding policy reforms the costs of inaction will be far higher

Psychology of Sustainable Development Peter Schmuck, Wesley P. Schultz, 2012-12-06 Human activity overuses the resources of the planet at a rate that will severely compromise the ability of future generations to meet their needs Changes toward sustainability need to begin within the next few years or environmental deterioration will become irreversible Thus the need to develop a mindset of sustainable development the ability of society to meet its needs without permanently

compromising the earth's resources is pressing. The Psychology of Sustainable Development clarifies the meaning of the term and describes the conditions necessary for it to occur. With contributions from an international team of policy shapers and makers, the book will be an important reference for environmental, developmental, social and organizational psychologists in addition to other social scientists concerned with the impact current human activity will have on the prospects of future generations.

Natural Resources And Sustainable Development B. K. Panda, Sukanta Sarkar, 2015. Natural resources are materials and components something that can be used that can be found within the environment. It occurs naturally within environments that exist relatively undisturbed by humanity in a natural form. It can be thought of as natural capital assets distinct from physical and human capital in that they are not created by human activity. Natural resource is often characterized by amounts of biodiversity and geodiversity existent in various ecosystems. They are useful materials from the Earth such as coal, oil, natural gas and trees. People use natural resources as raw materials to manufacture or create a range of modern conveniences. Water and food provide humans with sustenance and energy for example and fossil fuels generate heat as well as energy for transportation and industrial production. Natural resources are the raw materials supplied by nature. Everything produced, used and thrown away originates from natural resources. People cannot create natural resources. Sustainable development is a road map, an action plan for achieving sustainability in any activity that uses resources and where immediate and intergenerational replication is demanded. It is hoped that the present edition of this book will be beneficial to all concerned of the society in general and students, lawyers, advocates, academicians, human rights institutions, researchers and NGOs working in natural science, economics field in particular.

Cultural Sustainability and the Nature-Culture Interface Inger Birkeland, Rob Burton, Constanza Parra, Katriina Siivonen, 2018-03-14. As contemporary socio-ecological challenges such as climate change and biodiversity preservation have become more important, the three pillars concept has increasingly been used in planning and policy circles as a framework for analysis and action. However, the issue of how culture influences sustainability is still an underexplored theme. Understanding how culture can act as a resource to promote sustainability rather than a barrier is the key to the development of cultural sustainability. This book explores the interfaces between nature and culture through the perspective of cultural sustainability. A cultural perspective on environmental sustainability enables a renewal of sustainability discourse and practices across rural and urban landscapes, natural and cultural systems stressing heterogeneity and complexity. The book focuses on the nature-culture interface conceptualised as a place where experiences, practices, policies, ideas and knowledge meet, are negotiated, discussed and resolved. Rather than looking for lost unities or an imaginary view of harmonious relationships between humans and nature based in the past, it explores cases of interfaces that are context sensitive and which consciously convey the problems of scale and time. While calling attention to a cultural or culturalised view of the sustainability debate, this book questions the radical nature-culture dualism dominating positive modern thinking as well as its underlying view of nature as pre-given and

independent from human life The Politics of Nature Andrew Dobson, Paul Lucardie, 2002-11-01 This book presents a uniquely comprehensive and balanced survey of current green political ideas. It analyses the ability of these ideas to provide plausible answers to fundamental problems in political theory concerning justice and democracy, individual rights and freedom, human nature and gender. The authors, who come from a range of different disciplines, explore the relationship between green ideas and other traditions including liberalism, anarchism, feminism and Christianity.

Advances in Natural, Human-Made, and Coupled Human-Natural Systems Research Svetlana G. Maximova, Roman I. Raikin, Alexander A. Chibilev, Marina M. Silantyeva, 2023-03-16 This book is a collection of cutting edge and cross disciplinary studies on natural, human made and coupled human natural systems addressing the challenge of developing integrated knowledge from multiple disciplines. The authors explore the structure, function and dynamic mechanisms of various systems, both natural and human made, as well as analyze their reciprocal interactions under the concept of coupled human natural systems. These interactions are used to understand feedback, nonlinearities, thresholds, time lags, legacy effects and path dependencies emerging across multiple spatial, temporal and organizational scales. In other words, this book is a collection of advanced research on unique properties of natural and human made systems, as well as human environment dynamics, reciprocal relationships and cross scale interactions. The authors outline prospects on building a holistic view of social development and coherent sustainability. Among the topics covered are the following: human networks, research adaptation of local people to social and environmental challenges, coupled dynamics of socioeconomic and environmental systems, critical issues in social science, climate change, research education for greater sustainability, peace, justice and strong institutions, advances in cultural traditions and strategies for social stability, innovative development and barriers to sustainable development, economic systems in the age of digital changes and unstable external environments. The scholars analyze how more effective technologies can enhance resilience, reduce vulnerability and minimize human impacts on natural systems, taking into consideration critical thresholds to prevent harmful feedback to human systems. The authors grasp the complexity of systems by integrating knowledge of constituent subsystems and their interactions. The framework developed by the authors is used to integrate human and natural systems for achieving greater sustainability, covering critical threats, challenges and best governance approaches and practices. The research results obtained from studies on coupled human natural systems are stronger, the authors argue, if compared with traditional discipline approaches.

Essays on Nature and the Philosophy of Environmental Education Michael Bonnett, Justin Dillon, Alan Reid, 2025-09-26 This volume identifies and debates important elements of what would be involved in an education that is truly adequate for the environmental situation that currently confronts us The chapters in the book present a wide variety of perspectives and raise questions about much mainstream environmental education particularly the heavy emphasis given to science in understanding environmental problems and to technology for solving them Contributions argue that there are other equally if not more important aspects to be considered notably our underlying attitudes towards nature and the quality of our underlying relationship with it They raise questions about what we mean by nature and how we come to know it most authentically in its many facets The overweening anthropocentrism and desire for mastery that informs much of current Western engagement with nature is revealed as stymying our ability properly to recognise nature s intrinsic value and moral standing Consideration is given to the need for a curriculum in which morality poetry and myth art and the humanities have key roles to play and where our understandings of the qualities of time and space that frame the curriculum are refreshed The majority of the chapters in this book were originally published in the journal *Environmental Education Research*
