Space, Time, and Memory Lynn Nadel,Sara Aronowitz,2025-05-07 This is an open access title available under the terms of a CC BY NC ND 4 0 licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations Memories are not organized by a single arbitrary dimension such as mere association

Instead many dimensions have been taken to be part of the structure of memory Of these space and time stand out all personal experience can in principle be indexed by where and when specific events occurred and both scientific evidence and common sense suggest that the way we relate different events together in memory draws on these dimensions For instance to remember what one ate for lunch last Thursday one might call up a memory of where one was or retrace the events of the day leading up to lunch Some nuts and bolts questions arise immediately starting with whether the spatial or the temporal dimension is primary Or rather do we rely on both equally Do we represent them separately or jointly But there are bigger questions with broad implications What makes space and time such central structures in our cognitive world and what is the conceptual nature of these structures These questions are deeply related to one another though they span multiple fields and methodologies touching on philosophy psychology and neuroscience Space Time and Memory explores three key questions first the role of space and time as structures that organize memory second theories of the nature of memory itself that draw on space and time and finally applications of questions about the structure of memory to debates about perception decision making and artificial intelligence

*Converging Clinical and Engineering Research on Neurorehabilitation V* Jose L. Pons, Jesus Tornero, Metin Akay, 2025-02-26 The book reports on advanced topics in the areas of neurorehabilitation research and practice It focuses on new methods for interfacing the human nervous system with electronic and mechatronic systems to restore or compensate impaired neural functions Importantly the book merges different perspectives such as the clinical neurophysiological and bioengineering ones to promote feed and encourage collaborations between clinicians neuroscientists and engineers Based on the 2024 International Conference on Neurorehabilitation ICNR2024 held in La Granja Spain on November 5 8 2024 this book covers various aspects of neurorehabilitation research and practice including new insights into biomechanics brain physiology neuroplasticity and brain damages and diseases as well as innovative methods and technologies for studying and or recovering brain function from data mining to interface technologies and neuroprosthetics In this way it offers a concise yet comprehensive reference guide to neurosurgeons rehabilitation physicians neurologists and bioengineers Moreover by highlighting current challenges in understanding brain diseases as well as in the available technologies and their implementation the book is also expected to foster new collaborations between the different groups thus stimulating new ideas and research directions

**Intelligent Assistive Robots** Samer Mohammed, Juan C. Moreno, Kyoungchul Kong, Yacine Amirat, 2015-03-26 This book deals with the growing challenges of using assistive robots in our everyday activities along with providing intelligent assistive services The presented applications concern mainly healthcare and wellness such as helping elderly people assisting dependent persons habitat monitoring in smart environments well being security etc These applications reveal also new challenges regarding control theory mechanical design mechatronics portability acceptability scalability security etc
