**Dynamics of decision making: from evidence to preference and belief** Erica Yu, David A. Lagnado, 2014-10-24 At the core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision From perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a CT scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant significant and everyday decisions are dynamic over time Phenomena such as decoy effects preference reversals and order effects are still puzzling researchers For example in a legal context jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict From a standard Bayesian viewpoint the order in which people receive the evidence should not influence their final decision and yet order effects seem a robust empirical phenomena in many decision contexts Current research on how decisions unfold especially in a dynamic environment is advancing our theoretical understanding of decision making This Research Topic aims to review and further explore the time course of a decision from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects Research literatures encompassing varied approaches to the time scale of decisions will be brought into scope a Speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e g randomly moving dots stimuli within a few seconds with or without temporal uncertainty b Temporally extended value based decisions that integrate feedback values e g gambling machines and internally generated decision criteria e g when one switches attention selectively between the various aspects of several choice alternatives c Temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker s belief system towards the updating of the

beliefs and the formation of judgments and preferences as in the legal context Research that emphasizes theoretical concerns including optimality analysis and mechanisms underlying the decision process both neural and cognitive is presented as well as research that combines experimental and computational levels of analysis      **Fiscal Year 1975 Authorization for Military Procurement, Research, and Development, and Active Duty, Selected Reserve and Civilian Personnel Strengths** United States. Weisbrod,Joel F. Handler,Neil K. Komesar,2021 What is public interest law How effective is it What are the limits to litigation as a mechanism for conflict resolution In this study economists lawyers and sociologists evaluate an institutional form that is new to American society and indeed to the world the public interest law PIL organization The book introduces the reader to the structure resources and activities of this nonprofit industry and also to the factors that affect PIL firms in their choices of cases and methods of handling them The authors examine PIL s vast range of contemporary public policy concerns These include such general topics as the environment consumerism housing employment discrimination medical care occupational health and safety education finance and taxation A number of base studies are presented and a method for economic analysis and evaluation is introduced and applied The study points to PIL s success in advocating under represented interests in winning courtroom decisions and in translating legal victories into reallocations of resources At the same time it notes the bias of PIL towards test case litigation a propensity to focus on judicial victories rather than on real social change and a tendency to use lawyers even when other types of professionals might be more effective Many of these problems stem from uncertainty of funding and legal restrictions on nonprofit organizations The result is a set of hurdles that distracts PIL firms from their principal goals The authors do not limit themselves to PIL but comment on the effectiveness of legal instruments as devices for social change and on the behavior of the voluntary nonprofit sector a little studied portion of the economy The book presents a fresh approach to the study of both collective type economic problems and institutional setting in which public interest law works This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1978
