Extended- and Point-source Radiometric Program Francis John Davis, 1962 An extended source calibration area was set up in the Nevada Test Site area to encourage a standardization of airborne radiometric instrumentation among several government agencies and private companies A simulated plane source array was laid out with positions at 100 ft intervals in the form of a square 2000 ft on a side For ground measurements a smaller square array of 100 positions at 10 ft intervals was placed in the center of the large array Two sets of sources were used in the array Cobalt 60 and cesium 137 sources of 45 and 15 mc respectively were available for the large array and sources one hundredth of these values in the smaller array Point sources of Co exp 60 Cs exp 137 and I exp 131 of the order of 2 curies each were available for comparison with the area sources Measurements 3 ft above the area sources indicated 200 micronr hr for Co exp 60 and 225 micronr hr for Cs exp 137 Four government agencies and one private company participated in an intercalibration exercise during November 1960 Various types and sizes of aircraft from a Cessna 172 to a Douglas Dc 3 were used Various instrumentation devices mostly scintillation type detectors were tested Flights ranging from 100 to 1000 ft altitude included background measurements instrument calibration intercalibration proof testing equipment comparison of point and area source measurements measurements of air attenuation and buildup of gamma radiation and gamma ray spectral measurements

with deep holograms Other new topics covered in this new edition include interference with broad band light which introduces the reader to an important phenomenon discovered relatively recently by Emil Wolf namely the generation of shifts of spectral lines and other modifications of spectra of radiated fields due to the state of coherence of a source There is also a section on the so called Rayleigh Sommerfeld diffraction theory which in recent times has been finding increasing popularity among optical scientists There are also several new appendices including one on energy conservation in scalar wavefields which is seldom discussed in books on optics The new edition of this standard reference will continue to be invaluable to advanced undergraduates graduate students and researchers working in most areas of optics *Federal Register* ,1976-02-13 208 Data Clearinghouse ,1980 *EPA National Publications Catalog* United States. Optical Sources D. H. Sliney,J. Mellerio,2013-11-11 Nearly a decade ago a general review article on the evaluation of
 optical radiation hazards was published in Applied Optics Sliney and Freasier 1973 This article received many favorable
 comments but also prompted many inquiries regarding specific optical hazard problems From this it became evident that a
 monograph rather than a supplemental and expanded article was needed to fill this literature gap relating to laser and
 optical radiation hazards The present work is designed to fill that gap and is structured to permit either classroom or self
 study use Much of the material in this book was developed in connection with short courses on laser safety and radiometry in
 which we have participated as well as from our previous articles In particular the sequence of chapters is based upon the
 experiences which we have had in lecturing in courses with different schedules One of the great difficulties in developing a
 text of this nature is that a broad multidisciplinary background must be included in order that the reader can comprehend all
 of the subject matter readily For this reason the material presented on anatomy and physiology is oriented toward the
 engineer or physical scientist while the review material on basic optical physics is intended more for the physician or life
