Polar Bears Proceedings Of The Tenth Wor:

Great apes and FSC: implementing 'ape friendly' practices in Central Africa's logging concessions , **Best Practice Guidelines for the Re-Introduction of Great Apes** Benjamin Beck,2007 From the website Although the IUCN has previously established working protocols for plant and animal re introduction the great apes present unique challenges and concerns owing to their singular cognitive development This prompted the Primate Specialist Group to reconsider the existing guidelines in terms of the specific needs of great apes The resulting synthesis representing the expert opinion of primatologists and re introduction practitioners is presented here as part of the series of best practices documents Specifically designed for rehabilitators and specialists in re introduction these guidelines start from the fundamental assumption that re introductions should not endanger wild populations of great apes or the ecosystems they inhabit Equally important is the health and welfare of the individual great apes being re introduced as well as the caretaker staff and the residents of the surrounding areas The re introduction guidelines also require that the factors which first threatened great apes in the proposed site of release have been addressed and resolved **Polar Bears on the Edge** Morten Jørgensen,2015 Do you like polar bears Do you want polar bears to be around in 50 years Do you think that climate change is the only major threat to polar bear survival Do you believe that polar bears are adequately protected today Would you like to contribute to saving polar bears today and in the future If your answer to any of those questions is yes you need to read this book This book is an eye opener and should kick off extensive debates Dr Thor S Larsen professor emeritus Member of the IUCN Polar Bear Specialist Group 1968 1985 In this impassioned book Morten raises very important provocative questions that are not being addressed by the international environmental groups Art Wolfe Award winning conservation photographer In this book the author analyses the current status of the polar bear And he punctures the myth that polar bears are well protected and managed today While most people think that global warming is the overhanging threat to polar bear survival the author documents that it is actually the continuation of an unsustainable hunting pressure that is driving the species towards extinction Across 228 pages interspersed with beautiful photographs Morten Joergensen demonstrates how there are probably fewer polar bears than most authorities claim how hunting is the greatest manageable threat to the species how current protection measures are insufficient how the animal has been commercialized and how lack of courage and honesty is allowing this scenario to continue The book also contains a long string of realistic and very urgent recommendations for action to save polar bears before they are gone forever *Best Practice Guidelines for the Prevention and Mitigation of Conflict Between Humans and Great Apes* Kimberley Hockings,2009 Executive summary One of the challenges facing great ape conservation is the rising level of interaction between humans and great apes and the resulting conflicts that emerge As human populations continue to grow and human development makes deeper incursions into forest habitats such conflicts will become more widespread and prevalent in the natural ranges of great apes especially considering that the majority of great

apes live outside protected areas It is essential that we develop a comprehensive understanding of existing and potential conflict situations and their current or future impacts on both great apes and humans This will require the integration of quantitative and qualitative data on multiple aspects of human and great ape behaviour and ecology along with a good understanding of local people s perceptions of the situation Such knowledge can then be used to develop effective locally adapted management strategies to prevent or mitigate human great ape conflicts whilst respecting both conservation objectives and socio cultural economic contexts These guidelines outline a sequence of logical steps that should be considered prior to any form of human great ape conflict intervention and propose possible counter measures to be used in the management of human great ape conflicts

Best practice guidelines for the rehabilitation and translocation of gibbons International Union for the Conservation of Nature and Natural Resources (IUCN),Clare O. Campbell,Susan M.

Cheyne,Benjamin M. Rawson,2015-05-28 Rehabilitation and translocation programmes are increasingly becoming an important component of conservation action plans for threatened species Translocation can help address gibbon conservation issues gibbons are recognized as one of the most threatened primate families globally by allowing gibbons held in captivity to be rescued rehabilitated and then returned to the wild These guidelines for the translocation of gibbons have been developed in collaboration with stakeholders in hylobatid conservation This process was initiated during a workshop on gibbon rehabilitation reintroduction and translocation facilitated by the IUCN SSC PSG Section on Small Apes SSA and the result of this process is the current document which is based on shared knowledge and experience to date The guidelines are designed to be a practical and useful document available for all stakeholders with the aim of equipping field projects and decision makers with the tools for scientifically sound practice in gibbon rehabilitation and translocation

Best Practice Guidelines for Reducing the Impact of Commercial Logging on Great Apes in Western Equatorial Africa David Morgan,2007

From the website One of the fiercest dangers to great apes is the destruction of their forest habitat by commercial logging operations This threat was highlighted in May 2005 at an expert workshop held in Brazzaville Republic of Congo In response Drs David Morgan and Crickette Sanz have developed a new set of best practices guidelines for Western Equatorial Africa to help blunt the worst effects of tropical logging on the surviving great apes in the region Targeted at forestry managers and partners working in forestry concessions these guidelines present practical straightforward recommendations to help reduce the impact of logging on great apes including cost benefit analyses and the expected long term consequences for great apes in the region If these guidelines are upheld by professionals working in tropical forestry they will contribute greatly to the survival of great apes in the region and will serve as a blueprint for developing site specific management plans

Proceedings of the First International Scientific Meeting on the Polar Bear University of Alaska Fairbanks,1966
Proceedings of the first International Scientific Meeting on the Polar Bear held in Fairbanks Alaska in 1965 to report on the current state of knowledge of the biology ecology and conservation needs of the polar bear *Ursus maritimus* in Alaska

Canada Greenland Scandinavia and the Soviet Union **Best Practice Guidelines for Great Ape Tourism** Elizabeth J. Macfie, Elizabeth A. Williamson, 2010

Executive summary Tourism is often proposed 1 as a strategy to fund conservation efforts to protect great apes and their habitats 2 as a way for local communities to participate in and benefit from conservation activities on behalf of great apes or 3 as a business A few very successful sites point to the considerable potential of conservation based great ape tourism but it will not be possible to replicate this success everywhere The number of significant risks to great apes that can arise from tourism require a cautious approach If great ape tourism is not based on sound conservation principles right from the start the odds are that economic objectives will take precedence the consequences of which in all likelihood would be damaging to the well being and eventual survival of the apes and detrimental to the continued preservation of their habitat All great ape species and subspecies are classified as Endangered or Critically Endangered on the IUCN Red List of Threatened Species IUCN 2010 therefore it is imperative that great ape tourism adhere to the best practice guidelines in this document The guiding principles of best practice in great ape tourism are

Tourism is not a panacea for great ape conservation or revenue generation Tourism can enhance long term support for the conservation of great apes and their habitat Conservation comes first it must be the primary goal at any great ape site and tourism can be a tool to help fund it Great ape tourism should only be developed if the anticipated conservation benefits as identified in impact studies significantly outweigh the risks Enhanced conservation investment and action at great ape tourism sites must be sustained in perpetuity Great ape tourism management must be based on sound and objective science Benefits and profit for communities adjacent to great ape habitat should be maximised Profit to private sector partners and others who earn income associated with tourism is also important but should not be the driving force for great ape tourism development or expansion Comprehensive understanding of potential impacts must guide tourism development positive impacts from tourism must be maximised and negative impacts must be avoided or if inevitable better understood and mitigated The ultimate success or failure of great ape tourism can lie in variables that may not be obvious to policymakers who base their decisions primarily on earning revenue for struggling conservation programmes However a number of biological geographical economic and global factors can affect a site so as to render ape tourism ill advised or unsustainable This can be due for example to the failure of the tourism market for a particular site to provide revenue sufficient to cover the development and operating costs or it can result from failure to protect the target great apes from the large number of significant negative aspects inherent in tourism Either of these failures will have serious consequences for the great ape population Once apes are habituated to human observers they are at increased risk from poaching and other forms of conflict with humans They must be protected in perpetuity even if tourism fails or ceases for any reason Great ape tourism should not be developed without conducting critical feasibility analyses to ensure there is sufficient potential for success Strict attention must be paid to the design of the enterprise its implementation and continual management capacity in a manner that avoids

or at least minimises the negative impacts of tourism on local communities and on the apes themselves Monitoring programmes to track costs and impacts as well as benefits is essential to inform management on how to optimise tourism for conservation benefits These guidelines have been developed for both existing and potential great ape tourism sites that wish to improve the degree to which their programme contributes to the conservation rather than the exploitation of great apes

African Antelope Database 1998 Rod East,1999 Although most antelope species still exist in large numbers in sub Saharan Africa some in hundreds of thousands up to three quarters of the species are in decline Threats to their survival arise from the rapid growth of human and livestock populations with consequent degradation and destruction of natural habitats and excessive offtake by meat hunters In addition some parts of Africa are now almost completely devoid of large wild animals because of uncontrolled slaughter during recent civil wars This report presents the information currently held by the IUCN SSC Antelope Specialist Group on the conservation status of each antelope species and selected subspecies in sub Saharan Africa Key areas have been identified for the conservation of representative antelope communities While external donors make the greatest contributions to the conservation of antelopes greater recognition of wildlife conservation in national and regional development plans is often a critically important requirement

Polar Bears IUCN/SSC Polar Bear Specialist Group. Working Meeting,2002 These proceedings provide an overview of the ongoing research and management activities on polar bears in the circumpolar arctic Together with the previous 12 proceedings they provide an historic record of international efforts in protecting polar bears from over harvest and document more recent concerns of threats arising from increased human activities in both the Arctic and in regions far beyond the realm of polar bears More proactive management is needed to address limitations in the knowledge of population dynamics New information indicates that the greatest future challenges to polar bear conservation may be ecological change in the Arctic due to climate change and pollution The complex global nature of the issues requires international cooperation and development of diverse new approaches to address them

An IUCN situation analysis of terrestrial and freshwater fauna in West and Central Africa ,2015-06-01 This situation analysis was undertaken to inform responses to several resolutions made at the 5th World Conservation Congress in 2012 about the plight of large vertebrates in West and Central Africa It draws on a wide range of information to provide information on the status of these species important sites pressures legislation the effectiveness of protected areas and both community based incentives for conservation and institutional responses The overriding conclusion is of substantial wildlife declines and inadequate responses to either long standing pressures or rapidly escalating threats that have emerged in recent years

Conservation and Development Interventions at the Wildlife/livestock

Interface Steven A. Osofsky,2005 During a forum held at the Vth IUCN World Parks Congress in South Africa in 2003 the Wildlife Conservation Society WCS and the IUCN SSC Veterinary and Southern Africa Sustainable Use Specialist Groups VSG and SASUSG brought together nearly 80 experts from Africa and beyond to develop ways to tackle the immense health

related conservation and development challenges at the wildlife domestic animal human interface facing East and Southern Africa today and tomorrow This volume focuses on several themes of critical importance to the future of animal agriculture wildlife and of course people competition over grazing and water resources disease mitigation local and global food security and other potential sources of conflict related to the overall challenges of land use planning and the pervasive reality of resource constraints This publication seeks to draw attention to the need to move towards a one health perspective an approach that was the foundation of the discussions in Durban and a theme pervading these thought provoking insightful and practical Proceedings

Links Between Biodiversity Conservation, Livelihoods and Food Security Sue Mainka, Mandar Trivedi, 2002 The global use of wild animals for meat is now the primary illegal activity in many protected areas and growing human populations and a lack of livelihood options suggest that demand for wild meat is likely to continue to rise This Occasional Paper contains the background information presented to participants at a workshop jointly organized by IUCN FAO and TRAFFIC in Yaound Cameroon The workshop aimed to forge functional links among the various stakeholders concerned with the unsustainable use of wild fauna for food and it contains the communiqu and a summary of the discussions related to problems and solutions

Best Practice Guidelines for the Surveys and Monitoring of Great Ape Populations, 2008 From the website The IUCN SSC Primate Specialist Group is publishing new guidelines for surveys and monitoring of great ape populations These guidelines address a need which has existed since great ape studies began the challenge of collecting consistently high quality data for comparison between a wide variety of sites and often across many years This need is driven less by academic interest than by the urgent demands of field based conservation The maelstrom of threats which now endanger all the great apes must be addressed by immediate action on every scale initiatives at individual sites strategies on the regional and national level and species wide action plans and international accords All of these efforts must be founded on accurate field data and to fully understand the impact of specific threats and to measure if conservation programs are succeeding it is essential to have baseline density estimates and sustained monitoring of great ape populations The newest publication in the Best Practice series outlines current approaches to these issues offering guidance and perspective on choices that must be made by wildlife biologists site managers government agencies and the conservation community at large This report provides an overview of the variety of survey methodologies that have been developed as well as a decision tree to help select the approach that is best for a particular site or situation depending on available resources As a continuation of this report a series of modules will be made available online which will present detailed information on survey design field techniques analytical approaches and practical issues such as logistics finance and standardized reporting These new IUCN guidelines will help researchers to standardize their data collection and just as importantly will allow for improved comparisons between datasets This will complement the A P E S database <http://apes.eva.mpg.de> which is intended to serve as a repository for survey data on great apes and to analyze trends in their populations These survey and monitoring

guidelines combined with resources available via A P E S are important steps towards a comprehensive understanding of the conservation status of great apes at both the population and species level

Assessing the Sustainability of Uses of Wild Species Robert Prescott-Allen, Christine Prescott-Allen, 1996 Covers the key steps in the attempt to develop guidelines for using wild species

Sharks and Their Relatives Merry Camhi, 1998 Sharks and their relatives the rays and chimaeras are the diverse group of cartilaginous fishes that have evolved over 400 million years Historically considered of low economic value to large scale fisheries today many of these fishes have become the target of directed commercial and recreational fisheries around the world and they are increasingly taken in the by catch of fisheries targeting other species This report emphasizes the widely acknowledged need to improve shark fishery monitoring expand biological research and take management action It serves as an introduction to the ecology status and conservation of the sharks and their relatives for a general audience Shark fisheries can only be managed sustainably and shark populations remain viable with the introduction of new conservation and management initiatives

African Elephant Database 1998 R. F. W. Barnes, 1999 Reports on elephant surveys populations and distribution maps

African Elephant Status Report 2002 J. J. Blanc, 2003 The African elephant is the largest living land mammal and their potential impact on their habitats raises important management issues both for protected areas and unprotected land This Status Report derived from data contained in the African Elephant Database is rich in data and information on numbers distribution and current issues and provides continent wide information that is vital for conservation It will help wildlife management authorities to harmonize their policy and management decisions across regions as well as the continent to reduce conflict and relax the pressure on habitats
