confronting a new set of internal and external risks which may foreshadow the next crisis The Korean economy has been struggling with the faltering growth momentum and the rise of unprecedented socio economic problems over recent years well before the pandemic crisis After abrupt downshifts to markedly slower growth in the early 2000s economic growth has continued to decelerate Koreans are grappling with slow income growth all time high household debt high youth unemployment inequality and social polarization Politics is in disarray and is incapable of directing social discourse for the common good Rapid population aging along with the world's lowest fertility rates stokes fears of Japanification Simultaneously disruptive technologies and fast changing business environment such as the rise of China clash with a range of long standing structural problems. The contemporary challenges are radically different from those seen in the early stages of industrialization. There are multiple risks that threaten to self perpetuate low or stagnant growth over the next decade or so if not an outright financial crisis Motivated by these latest developments this book seeks to provide a timely and in depth analysis of key current issues and foreseeable challenges of the economy with a provocative reassessment of its future Based on extensive new empirical works it examines the underlying causes of the socio economic problems. In a constructive spirit it puts in perspective what would constitute critical elements of ideal policy solutions and the direction of the future government s role
