How Informative Are Real Time Output Gap Estimates in Europe?

Mr.Alvar Kangur,Koralai Kirabaeva,Jean-Marc Natal,Simon Voigts,2019-09-20 We study the properties of the IMF WEO estimates of real time output gaps for countries in the euro area as well as the determinants of their revisions over 1994 2017 The analysis shows that staff typically saw economies as operating below their potential In real time output gaps tend to have large and negative averages that are largely revised away in later vintages Most of the mis measurement in real time can be explained by the difficulty in predicting recessions and by overestimation of the economy s potential capacity We also find in line with earlier literature that real time output gaps are not useful for predicting inflation In addition countries where slack and potential growth is overestimated to a larger extent primary fiscal balances tend to be lower and public debt ratios are higher and increase faster than projected Previous research suggests that national authorities real time output gaps suffer from a similar bias To the extent these estimates play a role in calibrating fiscal policy over optimism about long term growth could contribute to excessive deficits and debt buildup
