Basic Structures of Reality Colin McGinn,2011-12-09 In Basic Structures of Reality Colin McGinn deals with questions of metaphysics epistemology and philosophy of mind from the vantage point of physics Combining general philosophy with physics he covers such topics as the definition of matter the nature of space motion gravity electromagnetic fields the character of physical knowledge and consciousness and meaning Throughout McGinn maintains an historical perspective and seeks to determine how much we really know of the world described by physics He defends a version of structuralism the thesis that our knowledge is partial and merely abstract leaving a large epistemological gap at the center of physics McGinn then connects this element of mystery to parallel mysteries in relation to the mind Consciousness emerges as just one more mystery of physics A theory of matter and space is developed according to which the impenetrability of matter is explained as the deletion of volumes of space McGinn proposes a philosophy of science that distinguishes physics from both psychology and biology explores the ontology of energy and considers the relevance of physics to seemingly remote fields such as the theory of meaning In the form of a series of aphorisms the author presents a metaphysical system that takes laws of nature as fundamental With its broad scope and deep study of the fundamental questions at the heart of philosophy of physics this book is not intended primarily for specialists but for the general philosophical reader interested in how physics and philosophy intersect

Between Two Worlds John Carriero,2008-12-29 Between Two Worlds is an authoritative commentary on and powerful reinterpretation of the founding work of modern philosophy Descartes s Meditations Philosophers have tended to read Descartes s seminal work in an occasional way examining its treatment of individual topics while ignoring other parts of the text In contrast John Carriero provides a sustained systematic reading of the whole text giving a detailed account of the positions against which Descartes was reacting and revealing anew the unity meaning and originality of the Meditations Carriero finds in the Meditations a nearly continuous argument against Thomistic Aristotelian ways of thinking about cognition and shows more clearly than ever before how Descartes bridged the old world of scholasticism and the new one of mechanistic naturalism Rather than casting Descartes s project primarily in terms of skepticism knowledge and certainty Carriero focuses on fundamental disagreements between Descartes and the scholastics over the nature of understanding the relation between the senses and the intellect the nature of the human being and how and to what extent God is cognized by human beings Against this background Carriero shows Descartes developed his own conceptions of mind body and the relation between them creating a coherent philosophically rich project in the Meditations and setting the agenda for a century of rationalist metaphysics
