Reality Is What You Can Get Away With:

The Poisoning of the American Mind Lawrence M. Eppard, Jacob L. Mackey, Lee Jussim, 2024-09-25 What would you have to believe in order to dress up as a shaman paint your face and storm the U S Capitol What could possibly lead somebody to claim that it upholds white supremacy to encourage hard work self reliance rational thinking punctuality and politeness Such behaviors would have been unimaginable only a few years ago And yet here we are witnessing millions of people across the political spectrum displaying these clear indications of an epistemically poisoned mind Both red America and blue America are retreating into their own information bubbles seceding from a common reality Both consume far too much misinformation and disinformation developing worldviews that can sometimes be unintelligible to others This book explores these disturbing developments and what they mean for our society and implores us all to recover a shared sense of what is true

The Big Picture Making Sense Out of Life and Religion Sean Williams, 2009-06-01 This book points out the undeniable similarities between The Gospel of Thomas the psychedelic experience the mystic path and the near death experience in order to put together the big picture and expose the truth about our existence Can you put together the similarities and understand the TRUTH that organized religion and the government have sought to keep from us Do you have the ears to HEAR

Evolution and Progress in Democracies Johann Götschl, 2013-03-09 In a ground breaking series of articles one of them written by a Nobel Laureate this volume demonstrates the evolutionary dynamic and the transformation of today s democratic societies into scientific democratic societies It highlights the progress of modeling individual and societal evaluation by neo Bayesian utility theory It shows how social learning and collective opinion formation work and how democracies cope with randomness caused by randomizers Nonlinear evolution equations and serial stochastic matrices of evolutionary game theory allow us to optimally compute possible serial evolutionary solutions of societal conflicts But in democracies progress can be defined as any positive gradual innovative and creative change of culturally used transmitted and stored mentifacts models theories sociofacts customs opinions artifacts and technifacts within and across generations The most important changes are caused besides randomness by conflict solutions and their realizations by citizens who follow democratic laws These laws correspond to the extended Pareto principle a supreme socioethical democratic rule According to this principle progress is any increase in the individual and collective welfare which is achieved during any evolutionary progress Central to evolutionary modeling is the criterion of the empirical realization of computed solutions Applied to serial conflict solutions decisions evolutionary trajectories are formed they become the most influential causal attractors of the channeling of societal evolution Democratic constitutions legal systems etc store all advantageous present and past adaptive competitive cooperative and collective solutions and their rules they have been accepted by majority votes Societal laws are codes of statutes default or statistical rules and they serve to optimally solve societal conflicts in analogy to game theoretical models or to statistical decision theory Such solutions become necessary when we face harmful or advantageous random events always lurking at the edge of

societal and external chaos The evolutionary theory of societal evolution in democracies presents a new type of stochastic theory it is based on default rules and stresses realization The rules represent the change of our democracies into information science and technology based societies they will revolutionize social sciences especially economics Their methods have already found their way into neural brain physiology and research into intelligence In this book neural activity and the creativity of human thinking are no longer regarded as linear deductive Only evolutive nonlinear thinking can include multiple causal choices by many individuals and the risks of internal and external randomness this serves the increasing welfare of all individuals and society as a whole Evolution and Progress in Democracies is relevant for social scientists economists evolution theorists statisticians philosophers philosophers of science and interdisciplinary researchers

The Atheist's Guide to Reality Alex Rosenberg,2011-09-26 A book for nonbelievers who embrace the reality driven life We can t avoid the persistent questions about the meaning of life and the nature of reality Philosopher Alex Rosenberg maintains that science is the only thing that can really answer them all of them His bracing and ultimately upbeat book takes physics seriously as the complete description of reality and accepts all its consequences He shows how physics makes Darwinian natural selection the only way life can emerge and how that deprives nature of purpose and human action of meaning while it exposes conscious illusions such as free will and the self The science that makes us nonbelievers provides the insight into the real difference between right and wrong the nature of the mind even the direction of human history The Atheist s Guide to Reality draws powerful implications for the ethical and political issues that roil contemporary life The result is nice nihilism a surprisingly sanguine perspective atheists can happily embrace Underneath the Deception Lies Reality M.
