Recent Developments In Domain Decomposition Methods:

Recent Developments in Domain Decomposition Methods Luca F. Pavarino, Andrea Toselli, 2012-12-06 The main goal of this book is to provide an overview of some of the most recent developments in the field of Domain Decomposition Methods. Domain decomposition relates to the construction of preconditioners for the large algebraic systems of equations which often arise in applications by solving smaller instances of the same problem. It also relates to the construction of approximation methods built from different discretizations in different subdomains. The resulting methods are among the most successful parallel solvers for many large scale problems in computational science and engineering. The papers in this collection reflect some of the most active research areas in domain decomposition such as novel FETI-Neumann, Neumann overlapping, Schwarz and Mortar methods. Domain Decomposition Methods in Science and Engineering XVI Olof B. Widlund, David E. Keyes, 2007-01-19 Domain decomposition is an active research area concerned with the development, analysis and implementation of coupling and decoupling strategies in mathematical and computational models of natural and engineered systems. The present volume sets forth new contributions in areas of numerical analysis, computer science, scientific and industrial applications and software development. **Domain Decomposition Methods - Algorithms and Theory** Andrea Toselli, Olof Widlund, 2006-06-20 This book offers a comprehensive presentation of some of the most successful and popular domain decomposition preconditioners for finite and spectral element approximations of partial differential equations. It places strong emphasis on both algorithmic and mathematical aspects. It covers in detail important methods such as FETI and balancing Neumann-Neumann methods and algorithms for spectral element methods. *Domain Decomposition Methods in Science and Engineering* Ralf Kornhuber, Ronald W. Hoppe, Jacques Periaux, Olivier Pironneau, Olof Widlund, Jinchao Xu, 2006-03-30 Domain decomposition is an active interdisciplinary research area that is devoted to the development, analysis and implementation of coupling and decoupling strategies in mathematics, computational science, engineering and industry. A series of international conferences starting in 1987 set the stage for the presentation of many, meanwhile classical, results on substructuring, block iterative methods, parallel and distributed high performance computing, etc. This volume contains a selection from the papers presented at the 15th International Domain Decomposition Conference held in Berlin, Germany, July 17-25, 2003, by the world's leading experts in the field. Its special focus has been on numerical analysis, computational issues, complex heterogeneous problems, industrial problems and software development. *Domain Decomposition Methods in Science and Engineering XXII* Thomas Dickopf, Martin J. Gander, Laurence Halpern, Rolf Krause, Luca F. Pavarino, 2016-03-11 These are the proceedings of the 22nd International Conference on Domain Decomposition Methods which was held in Lugano, Switzerland. With 172 participants from over 24 countries, this conference continued a long-standing tradition of internationally oriented meetings on Domain Decomposition Methods. The book features a well-balanced mix of established and new topics such as the manifold theory of Schwarz Methods, Isogeometric Analysis, Discontinuous Galerkin Methods.

exploitation of modern HPC architectures and industrial applications As the conference program reflects the growing capabilities in terms of theory and available hardware allow increasingly complex non linear and multi physics simulations confirming the tremendous potential and flexibility of the domain decomposition concept *Domain Decomposition Methods for the Numerical Solution of Partial Differential Equations* Tarek Mathew, 2008-06-25 Domain decomposition methods are divide and conquer computational methods for the parallel solution of partial differential equations of elliptic or parabolic type The methodology includes iterative algorithms and techniques for non matching grid discretizations and heterogeneous approximations This book serves as a matrix oriented introduction to domain decomposition methodology A wide range of topics are discussed include hybrid formulations Schwarz and many more **Fourth International Symposium on**

Domain Decomposition Methods for Partial Differential Equations R. Glowinski, 1991-01-01 Focuses on the notion that by breaking the domain of the original problem into subdomains such an approach can if properly implemented lead to a considerable speedup The methods are particularly well suited for parallel computers **Domain Decomposition**

Methods in Optimal Control of Partial Differential Equations John E. Lagnese, Günter Leugering, 2012-12-06 This monograph considers problems of optimal control for partial differential equations of elliptic and more importantly of hyperbolic types on networked domains The main goal is to describe develop and analyze iterative space and time domain decompositions of such problems on the infinite dimensional level While domain decomposition methods have a long history dating back well over one hundred years it is only during the last decade that they have become a major tool in numerical analysis of partial differential equations A keyword in this context is parallelism This development is perhaps best illustrated by the fact that we just encountered the 15th annual conference precisely on this topic Without attempting to provide a complete list of introductory references let us just mention the monograph by Quarteroni and Valli 91 as a general up to date reference on domain decomposition methods for partial differential equations The emphasis of this monograph is to put domain decomposition methods in the context of so called virtual optimal control problems and more importantly to treat optimal control problems for partial differential equations and their decompositions by an all at once approach This means that we are mainly interested in decomposition techniques which can be interpreted as virtual optimal control problems and which together with the real control problem coming from an underlying application lead to a sequence of individual optimal control problems on the subdomains that are iteratively decoupled across the interfaces **Recent Developments in**

Discontinuous Galerkin Finite Element Methods for Partial Differential Equations Xiaobing Feng, Ohannes Karakashian, Yulong Xing, 2013-11-08 The field of discontinuous Galerkin finite element methods has attracted considerable recent attention from scholars in the applied sciences and engineering This volume brings together scholars working in this area each representing a particular theme or direction of current research Derived from the 2012 Barrett Lectures at the University of Tennessee the papers reflect the state of the field today and point toward possibilities for future inquiry The

longer survey lectures delivered by Franco Brezzi and Chi Wang Shu respectively focus on theoretical aspects of discontinuous Galerkin methods for elliptic and evolution problems Other papers apply DG methods to cases involving radiative transport equations error estimates and time discrete higher order ALE functions among other areas Combining focused case studies with longer sections of expository discussion this book will be an indispensable reference for researchers and students working with discontinuous Galerkin finite element methods and its applications
