Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i.e they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

Automata and Computability Insights Anasooya Khanna, 2025-02-20 Automata and Computability Insights is a foundational textbook that delves into the theoretical underpinnings of computer science exploring automata theory formal languages and computability Authored by Dexter C Kozen this book provides a deep understanding of these concepts for students researchers and educators Beginning with a thorough introduction to formal languages and automata the book

covers finite automata regular languages context free languages and context free grammars It offers insightful discussions on pushdown automata and their expressive power The book also explores decidability and undecidability including the Halting Problem and decision procedures providing a profound understanding of computational systems limitations and capabilities Advanced topics such as quantum computing oracle machines and hypercomputation push the boundaries of traditional computational models The book bridges theory and real world applications with chapters on complexity theory NP completeness and parallel and distributed computing This interdisciplinary approach integrates mathematical rigor with computer science concepts making it suitable for undergraduate and graduate courses Automata and Computability Insights is a valuable reference for researchers presenting complex topics clearly and facilitating engagement with numerous exercises and examples It equips readers with the tools to analyze and understand the efficiency of algorithms and explore open problems in theoretical computation

Word Sense Disambiguation Eneko Agirre, Philip Edmonds, 2007-11-16 Graeme Hirst University of Toronto Of the many kinds of ambiguity in language the two that have received the most attention in computational linguistics are those of word senses and those of syntactic structure and the reasons for this are clear these ambiguities are overt their resolution is seemingly essential for any practical application and they seem to require a wide variety of methods and knowledge sources with no pattern apparent in what any particular stance requires Right at the birth of artificial intelligence in his 1950 paper Computing machinery and intelligence Alan Turing saw the ability to understand language as an essential test of intelligence and an essential test of language understanding was an ability to disambiguate his example involved deciding between the generic and specific readings of the phrase a winter's day The first generations of AI researchers found it easy to construct amplitudes of ambiguities whose resolution seemed to require vast knowledge and deep understanding of the world and complex inference on this knowledge for example Pharmacists dispense with accuracy The disambiguation problem was in a way nothing less than the artificial intelligence problem itself No use was seen for a disambiguation method that was less than 100% perfect either it worked or it didn't Lexical resources such as they were were considered secondary to non linguistic common sense knowledge of the world

Multimodality in Language and Speech Systems Björn Granström, D. House, I. Karlsson, 2013-04-17 This book is based on contributions to the Seventh European Summer School on Language and Speech Communication that was held at KTH in Stockholm Sweden in July of 1999 under the auspices of the European Language and Speech Network ELSNET The topic of the summer school was Multimodality in Language and Speech Systems MiLaSS The issue of multimodality in interpersonal face to face communication has been an important research topic for a number of years With the increasing sophistication of computer based interactive systems using language and speech the topic of multimodal interaction has received renewed interest both in terms of human human interaction and human machine interaction Nine lecturers contributed to the summer school with courses on specialized topics ranging from the technology and science of creating talking faces to human human

communication which is mediated by computer for the handicapped Eight of the nine lecturers are represented in this book The summer school attracted more than 60 participants from Europe Asia and North America representing not only graduate students but also senior researchers from both academia and industry Word Frequency Distributions R. Harald Baayen, 2002-09-30 This book is a comprehensive introduction to the statistical analysis of word frequency distributions intended for computational linguists corpus linguists psycholinguists and researchers in the field of quantitative stylistics It aims to make these techniques more accessible for non specialists both theoretically by means of a careful introduction to the underlying probabilistic and statistical concepts and practically by providing a program library implementing the main models for word frequency distributions **Multimodal Human-Computer Communication** Harry Bunt, Robbert-Jan Beun, Tijn Borghuis, 1998-04-08 This book constitutes the strictly reviewed post workshop documentation of the First International Conference on Cooperative Multimodal Communication held in Eindhoven The Netherlands in 1995 The volume presents an introductory survey and carefully revised and updated full versions of three invited contributions and 14 papers selected for inclusion in the book after intensive reviewing Among the issues addressed are intelligent multimedia retrieval cooperative conversation agent system communication multimodal maps multimodal plan presentation multimodal user interfaces multimodal dialog and various systems for multimodal HCI *Issues in Mathematical Linguistics* Carlos Martín Vide, 1999 This brief collection of refereed papers approaches several technical as well as methodological aspects of the mathematical formalization of natural language particularly in syntax and in semantics Such kind of investigation is a prerequisite for the computational processing of language and is narrowly related to current developments in other disciplines namely theoretical computer science and mathematical logic The volume offers a coherent picture of recent research on the mathematics of language and may be of interest to a wide audience from linguists to mathematicians Detailed indexes of authors and topics provide an easy access to the contents
