Receptor Mediated Binding And Internalization Of Toxins And Hormones:

Receptor-Mediated Binding and Internalization of Toxins and Hormones John Middlebrook, 2012-12-02 Receptor Mediated Binding and Internalization of Toxins and Hormones presents the proceedings of a conference conducted for the purpose of exploring relationships between hormones and toxins specifically receptor mediated internalization of toxins and hormones and the role of this internalization in message transmission and biodegradatory processes This book is divided into three sections with the first focusing on model systems of internalization It presents pictorial illustrations of the receptor mediated endocytosis of low density lipoprotein via coated regions of membrane and discusses the receptor for lysosomal enzymes on the surface of cultured fibroblasts The second section focuses on toxins and hormones and discusses such topics as receptor mediated internalization of diphtheria toxin diphtheria toxin interactions with an inhibitory activity from plasma membranes and uptake mechanisms for ADP ribosylating toxins The third and final section focuses on hybrids and discusses such topics as chimeric toxins containing fragment A from diphtheria toxin directed entry of hybrid proteins into cells via alternate receptors and a hybrid protein of monoclonal anti THY 1 2 and diphtheria toxin fragment A This book will be of interest to practitioners in the fields of endocrinology cell biology and molecular genetics **Annual Progress Report** U.S. Army Medical Research Institute of Infectious Diseases, 1980 **Annual Progress Report**, Mechanisms of Receptor Regulation George Poste, Stanley T. Crooke, 2013-11-11 It is less than 80 years since John Newport Langley first proposed the role of receptive substances as the site of drug action from his observations on the effects of nicotine and curare at the myoneural junction The many advances in our understanding of receptor biology that have occurred during the intervening period mirror the extraordinary growth of knowledge in the biological sciences and in cell and molecular biology in particular Receptor biology in common with many other topics in contemporary biology is on the threshold of a transition from being a descriptive phenomenological discipline to one in which underlying mechanisms and regulatory principles can be defined with increasing precision This change together with the evolution of powerful analytical techniques and timely convergence of ideas from a number of previously separate fields of inquiry is generating an increasingly unified theoretical and experimental framework for the study of receptor function These themes and the mood of anticipation that a real understanding of receptor function in health and disease is emerging are reflected in this volume which summarizes the proceedings of the Second papers and Smith Kline French Research Symposium on New Horizons in Therapeutics held in Philadelphia in 1984 **Current Catalog** National Library of Medicine (U.S.), 1982 First multi year cumulation covers six years 1965 70 *Hormonal Control of the Hypothalamo-Pituitary-Gonadal Axis* Kenneth W. McKerns, 2013-04-17 The eleventh monograph and meeting of the Foundation on Hormonal Control of the Hypothalamo Pituitary Gonadal Axis was held in October 1983 at the Weizmann Institute of Science This monograph honors the memory of Professor Hans R Lindner a productive and innovative scientist greatly respected and admired by his colleagues When addressing the opening session

I remarked that my impression of the Weizmann Institute was one or two large buildings housing the various departments. This was my first visit to Israel and I was overwhelmed by the beautiful semi tropical gardens of the institute in a setting of shrubs and trees orange groves and flowers. Sited among this seventy five acres are over fifty buildings and residential areas for the staff and visiting scientists. I saw pictures of this area when Dr Chaim Weizmann founded in 1934 the Daniel Sieff Research Institute the forerunner of the Weizmann Institute. The site was sand dunes without a blade of grass. That the desert shall bloom is illustrative of the progress made in Israel. The topics of the monograph are grouped into twelve sections.

Motta, 2012-12-06 Pathology Reviews · 1989 Emanuel Rubin, Ivan Damjanov, 2013-11-11 on the theories of Planck and Einstein. Rather until The concept that human disease is a specialized branch of biology is universally accepted today but in the mid 20th century the accretion of individual historical perspective is actually of recent origin. At examples of the biological nature of disease processes provided the framework for an evolutionary change in one time the heliocentric theories of astronomy and the metallurgic transmutations of alchemy had their thinking. The new psychological and philosophical milieu provided the basis for an unprecedented accelerated counterparts in magical and vitalistic approaches to creation in the pace of biomedical research. It is clear human disease. Any relation between disease of humans and that of animals was not only unacceptable that the biological revolution of the last 35 years was made possible not only by technological advances and intellectually but abhorrent theologically. Humans and their diseases were unique and biology was the innovative analytical methods but also by an intellectual domain of those who studied animals and plants. Equal emphasis on the unity of biological processes. The unification of biology and the study of human. High school students are now aware that there is much disease though begun some centuries ago was known to be learned about the human condition by studying conspicuously stimulated by the work of Darwin and bacterial DNA the chloroplasts of green leaves or the reached its full flower in this century. For example kinetics of enzymes in vitro. **Trafficking of Bacterial Toxins** Catharine B. Saelinger, 1989-12-21 This work represents a compilation of studies on the entry into and subsequent processing of several bacterial and plant toxins in mammalian cells. Emphasis is placed on the close parallel of mammalian cell processing of toxic proteins and physiologically essential ligands. This easy to read book includes chapters which review the structures of the toxins. It compares and contrasts the trafficking of pseudomonas and diphtheria toxins. It also discusses anthrax toxin and the clostridial neurotoxins.
