

T Cell Receptor Structure and Function

Structure

The T cell receptor (TCR) is a transmembrane protein complex, consisting of an α and β chain, each with a variable and constant region. TCRs are associated with CD3 proteins, which mediate signal transduction.

Diversity

TCR diversity is generated through V(D)J recombination, enabling T cells to recognize a wide range of peptide antigens.

Function

TCRs recognize short peptide fragments presented by MHC molecules on antigen-presenting cells (APCs). This interaction initiates T cell activation and differentiation into effector cells.

Receptors Structure And Function:

Receptors Clare Stanford, Roger W. Horton, 2001 Given the number of exciting developments across the whole spectrum of receptor research in recent years the editors have not restricted themselves to one particular approach or class of receptors Thus the studies within range from G protein coupled surface receptors to the delivery of antisense DNA inside living cell systems A distinguished team of contributors cover these diverse areas identifying any difficulties likely to be encountered and appropriate steps to overcome them Wherever appropriate the theoretical basis of each topic is explained first so that the results emerging from the practical procedures can be fully understood Anyone with an interest in receptor structure and function will find this book an invaluable resource Hormone Receptors: Structures and Functions, 2023-09-15 Hormone Receptors Structures and Functions Volume 123 in the Vitamins and Hormones series highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in the Vitamins and Hormones series Updated release includes the latest information on Hormone Receptors *G Protein-Coupled Receptors* Jesus Giraldo, Jean-Philippe Pin, 2011-08-16 G protein coupled receptors GPCRs are the largest family of cell surface receptors with more than 800 members identified thus far in the human genome They regulate the function of most cells in the body and represent approximately 3% of the genes in the human genome These receptors respond to a wide variety of structurally diverse ligands ranging from small molecules such as biogenic amines nucleotides and ions to lipids peptides proteins and even light Ligands agonists and antagonists acting on GPCRs are important in the treatment of numerous diseases including cardiovascular and mental disorders retinal degeneration cancer and AIDS It is estimated that these receptors represent about one third of the actual identified targets of clinically used drugs The determination of rhodopsin crystal structure and more recently of opsin 1 and 2 adrenergic and A2A adenosine receptors provides both academia and industry with extremely valuable data for a better understanding of the molecular determinants of receptor function and a more reliable rationale for drug design GPCR structure and function constitutes a hot topic The book which lies between the fields of chemical biology molecular pharmacology and medicinal chemistry is divided into three parts The first part considers what receptor structures tell us about the mechanism of receptor activation Part II focuses on receptor function It discusses what the data from biophysical and mutational studies and the analysis of the interactions of the receptor with ligands and regulator proteins tell us about the process of signal transduction The final part on modelling and simulation details new insights on the link between structure and mechanism and their implications in drug design Structure and Function of Calcium Release Channels Irina Serysheva, 2010-09-22 This volume of Current Topics in Membranes focuses on Membrane Protein Crystallization beginning with a review of past successes and general trends then further discussing challenges of membranes protein crystallization cell free production of membrane proteins and novel lipids

Research Awards Index ,1988 *Cumulated Index Medicus* ,1989 **Cell Signalling** John T. Hancock,2017 Signaling within and between cells is one of the most important aspects of modern biochemistry and cell biology An understanding of signalling pathways is vital to a wide range of biologists from those who are investigating the causes of cancer to those who are concerned about the impact of environmental pollutants on the ecosystem The way cells adapt to changing environments and the way cell dysfunction causes disease is underpinned by cell signalling events Cell Signalling presents a carefully structured and highly accessible introduction to this intricate and rapidly growing field Starting with an overview of cell signalling and highlighting its importance in many biological systems the book goes on to explore the key components of extracellular and intracellular signalling mechanisms before examining how these components come together to create signalling pathways A focus on common components and concepts rather than mechanistic detail allows the reader to gain a thorough understanding of the principles that underpin cell signalling Online Resource Centre The Online Resource Centre to accompany Cell Signalling features For students Links to useful websites For registered adopters of the text Journal Clubs suggested research papers and discussion questions linked to topics featured in the book Figures from the book in electronic format for use in lectures *From Peptide and Protein Toxins to Ion Channel Structure/Function and Drug Design* Victor I.
