Regional Chemotherapy Theory And Practice:

Regional Chemotherapy: Theory and Practice D. Kerr, C. McArdle, 2000-01-10 *Regional Chemotherapy Theory and Practice* describes the rationale for the use of regional chemotherapy in a range of common solid tumor types. The editors highlight the pharmacokinetic principles which apply to each of the specific locoregional therapies as well as describing intraperitoneal, intrahepatic, arterial, intrapleural, intrathecal and isolated limb perfusions. The application, efficacy and toxicity of these treatments and their relevance to current conventional cancer therapy is made clear throughout, providing a unique focus for all those involved in oncological care. For medical, clinical and surgical oncologists and pharmacists, this essential book provides the opportunity to gain a theoretical and practical grounding in this technique and offers valuable insight into the skills required to initiate regional chemotherapy programs.

Regional Chemotherapy Maurie Markman, 2000-01-02 Maurie Markman and a panel of distinguished clinicians and leading clinical investigators comprehensively review the current status of regional antineoplastic drug delivery in the management of malignant disease. These authorities present a critical analysis of both the rationale and limitations of regional therapy and discuss potential clinical trials designed to explain the effectiveness of this method of therapy in special settings. Their presentations describe many exciting and innovative strategies for using regional drug delivery in anticancer therapy, including coverage of such areas of special interest as colorectal, skin, lung, pancreatic, ovarian and gastrointestinal cancers. Comprehensive and authoritative, *Regional Chemotherapy: Clinical Research and Practice* offers surgical and medical oncologists and clinical cancer investigators a gold standard review of the current role and future development of this increasingly powerful weapon in the battle against cancer.

Regional Chemotherapy U. Laffer, W. Weber-Stadelmann, U. Metzger, 1988-06 **Handbook of Anticancer Pharmacokinetics and Pharmacodynamics** William D. Figg, Howard L. McLeod, 2004-03-26 Leading investigators synthesize the entire laboratory and clinical process of developing anticancer drugs to create a single indispensable reference that covers all the steps from the identification of cancer-specific targets to phase III clinical trials. These expert authors provide their best guidance on a wide variety of issues, including clinical trial design, preclinical screening and the development and validation of bioanalytic methods. The chapters on identifying agents to test in phase III trials and on trial design for the approval of new anticancer agents offer a unique roadmap for moving an agent to NDA submission.
