Regional Inequality And Structural Changes:

Regional Inequality and Structural Changes Eduardo A. Haddad, 2018-10-26 Published in 1999 The liberalization process in Latin America during the 1990s resulted in the increase and diversification of trade in the region Brazil as a major player strengthened its insertion into the world economy through the adoption of strategies for opening up markets and of new production technologies complemented more recently by the creation of a broadly based stabilization plan In this context issues related to structural changes in the economy such as those involving the complexity of new international trading agreements and their impact on the Brazilian economy warrant special attention The results of this study suggest that the interplay of market forces in the Brazilian economy favour the more developed region of the country **Regional**

Inequality and Structural Changes in the Brazilian Economy Eduardo Amaral Haddad, 1998 **Growth, Structural Change and Regional Inequality in Malaysia** Asan Ali Golam Hassan, 2017-11-30 Economic development in the long run is seen as a process of structural change that is affected by economic growth Malaysia is one of the middle income economies that are going through rapid structural change Since the mid 1980s it has changed to an industrially based economy with large scale export of electrical and electronic components However thirty years after Malaysia's redistributive policies have been exercised regional inequality still exists This book examines the nature and impact of regional policies in relation to the patterns of demographic and economic structural change and in relation to growth distribution and income disparities across regions in Peninsular Malaysia The book also explores the degree to which differences in regional manufacturing distribution and concentration have contributed to regional inequality It concludes with a number of recommendations for regional policies that will reduce this inequality **Regional Inequality and Development** Takahiro Akita, Mitsuhiro

Kataoka, 2022-07-14 This book addresses three main issues in regional income inequality and development meaning of regional inequality measurement of regional inequality and the relationship between national economic development and regional income inequality It provides analytical methods useful in exploring the determinants of regional inequality in income and productivity Some software commands in Stata statistical software package available for the measurement and analysis of income inequality are also introduced Some researchers have argued that spatial concentration of population in and around major cities and the concurrent increase in regional inequality do not hinder national economic development and may stimulate it Nevertheless many national governments seek to promote balanced regional economic development and reduce regional income inequality because unbalanced development and higher levels of regional inequality may cause political or ethnic conflicts between different regions of the country As the applications of the analytical methods introduced in the first part of the book the second part presents four independent empirical studies on regional inequality and development in Indonesia They offer very interesting case studies for the formulation of policies and programs to reduce regional inequalities because as the world's largest archipelagic country with more than 13 thousand islands and 300 ethnic

groups Indonesia is spatially diverse in terms of its ecology natural resource endowments economy ethnicity and culture This book can be used as a textbook for undergraduate and graduate students who are interested in national economic development and regional income inequality It is also beneficial for practitioners and policy makers who are in charge of the formulation implementation and evaluation of development policies and programs *Regional Inequality in Transitional China* Felix Haifeng Liao,Yehua Dennis Wei,Li Huang,2020-09-17 This book investigates uneven regional development in China with particular focus on the cases of Guangdong and Zhejiang provinces which have been at the forefront of debate since Chinese economic reform Rapid economic growth since the opening up of China has been accompanied by significant disparities in the regional distribution of income this book represents one of the most recent studies to present a picture of this inequality Built upon a multi scale and multi mechanism framework it provides systematic examination of both the patterns and mechanisms of regional development and inequality in provincial China emphasizing the effects of economic transition Approaching from a geographical perspective its authors consider the interplay between the local the state and the global forces in shaping the landscape of regional inequality in China Extensive empirical findings will prove useful to those researching other developing countries within the frontier of globalization and economic transition *Regional Inequality in Transitional China* will appeal to scholars and students of geography economics and Chinese studies more broadly

Openness, Economic Growth and Regional Disparities Yanqing Jiang,2013-11-29 Substantial disparities across different Chinese regions are one of the most prominent features in China s development process This book investigates the mechanisms through which openness affects regional economic growth and interregional disparities in China Based on the latest data and employing a variety of panel data regression techniques it provides readers with new findings that shed light on the effects of openness on China s regional economic growth and the evolution of the country s interregional disparities

Regional Disparities in Small Countries Daniel Felsenstein,2005-05-09 This book challenges the common perception that significant regional disparities do not exist in small countries As small developed countries become increasingly competitive and their economic structures resemble those of the large a re assessment of the regional consequences of these changes is of timely importance *Regional Disparities in Small Countries* presents a systematic discussion of the unique theoretical methodological and measurement challenges in analyzing regional inequalities in small countries and a series of empirical analyses addressing the issue of regional convergence and divergence in these countries With contributions from leading regional scientists and economists this book also examines the policy experience of small countries in closing regional gaps and the effectiveness of public interventions in this field see Reviews **The Economic Development of Europe's Regions** Joan Ramón Rosés,Nikolaus Wolf,2018-11-06 This book is the first quantitative description of Europe s economic development at a regional level over the entire twentieth century Based on a new and comprehensive set of data it brings together a group of leading economic historians in order to describe and analyze the development of European

regions both for nation states and for Europe as a whole This provides a new transnational perspective on Europe's quantitative development offering for the first time a systematic long run analysis of national policies independent from the use of national statistical units The new transnational dimension of data allows for the analysis of national policies in a more thorough way than ever before The book provides a comprehensive database at the level of modern NUTS 2 regions for the period 1900-2010 in 10 year intervals and a panoramic view of economic development both below and above the national level It will be of great interest to economic historians economic geographers development economists and those with an interest in economic growth

Structural Change and Income Distribution Guanghua Wan, 2017 This study explores the relationship between inequality and structural transformation by constructing a theoretical model developing analytical frameworks and implementing a case study The general equilibrium model we develop demonstrates that inequality exhibits an inverted U shape as structural change proceeds from onset to completion Our analytical frameworks enable decomposition of total inequality into sector contributions and a change in total inequality into a component attributable to structural transformation and the other component to concentration or spatial agglomeration Applying the decomposition frameworks to data from the People's Republic of China yield various interesting findings and more importantly confirms the inverted U shape as predicted by our theoretical model

Impact Evaluation of Infrastructure Interventions Henrik Hansen, Ole Winckler Andersen, Howard White, 2013-09-13 The focus on results in development agencies has led to increased focus on impact evaluation to demonstrate the effectiveness of development programmes This book illustrates the broad range of methods available for counterfactual analysis of infrastructure programmes such as establishment rehabilitation and maintenance of roads water supply and electrical power plants and grids Understanding the impact of interventions requires understanding of the context in which the intervention takes place and the channels through which it is expected to occur For infrastructure interventions it is particularly important to identify the links between the input and the outcomes and impacts because the well being of people the ultimate impact does not change directly as a consequence of the intervention Therefore impact evaluation of infrastructure programmes typically requires mixing both quantitative and qualitative approaches as illustrated in many of the contribution to this edited volume This book was originally published as a special issue of the Journal of Development Effectiveness

Regional Inequality in Spain Alfonso

Diez-Minguela, Julio Martinez-Galarraga, Daniel A. Tirado-Fabregat, 2018-12-28 This book traces regional income inequality in Spain during the transition from a pre industrial society to a modern economy using the Spanish case to shed further light on the challenges that emerging economies are facing today Regional inequality is currently one of the most pressing problems in the European Union and this text presents a novel dataset covering 150 years to analyse long run trends in regional per capita GDP Spatial clustering and a new economic geography approach also contribute to the historical analysis provided which points to the role played by spatial externalities and their growing relevance over time To identify the presence of spatial dependence is crucial not only for getting a better understanding of distribution dynamics but also for economic policy purposes What are the potential causes behind the disparities in regional per capita income and productivity The authors answer this by comparing results with evidence available for other countries chiefly France Italy and Portugal but is of global relevance
