**Understanding the Evolution of Regional Economic Development and Tourism Efficiency in China** Tsung Pao Wu, 2024-07-16 This insightful volume delves into the intricate relationship between economic growth and tourism effectiveness in China's diverse regions. With a focus on practical insights and accessible language, this book is essential reading for policymakers, economists, and tourism professionals seeking to understand the dynamics of regional development. By emphasizing China's unique experiences, the text offers valuable lessons applicable to regions worldwide. Engaging and concise, it navigates complex concepts with clarity, making it accessible to a global audience. Highlighting key trends and emerging theories, this work serves as a vital resource for anyone interested in the intersection of economic development and tourism efficiency.

**Regional Economic Impact Analysis and Project Evaluation** H. Craig Davis, 1990 This book provides a non-technical introduction to the fundamental principles and techniques of regional impact and evaluation analysis. The book is written for readers who have a minimal background in mathematics and economics, and so the materials listed in the bibliographies have been chosen for their accessibility to such readers. References to relevant papers of a more technical nature are indicated in notes in each reference. Unlike existing texts which usually concentrate on regional impact or evaluation analysis, *Regional Economic Impact Analysis and Project Evaluation* offers an extensive introduction to both these subjects since both are critical to the study and practice of regional economic analysis. Two case studies intended as illustrations of practical applications are included in each of the six chapters that deal with specific principles or techniques. While many of the case studies and much of the literature cited in the bibliographies is Canadian, a substantial portion is from the United States and Great Britain, demonstrating that the principles and techniques discussed in this book are universally applicable.

Yaling Li, 2023-10-31 According to the neoclassical growth theory and the endogenous growth theory, changes in the stock of capital and labor affect economic growth rates in the short run, and differences in human capital stocks are likely to affect total factor productivity directly and long-term economic growth rates indirectly. Therefore, human capital is a factor in the secular trends of regional economic gaps. In this study, the author examines the relationship between regional economic disparities and the country's human capital stocks and structure in China between 1990 and 2015, a period of economic transformation in the country. Available empirical evidence supports the argument that boosting investment toward and optimizing the spatial distribution of human capital can help mitigate regional economic disparity and facilitate balanced and coordinated economic development across the country.

Parliament: House of Commons: Communities and Local Government Committee, 2007-03-14 This inquiry was prompted by the fact that although it is more than twelve months since a referendum rejected the plans for a regional assembly for the North East there has been no new direction for the Government's regional policy The Committee focused on two main questions how does the current system of regional governance actually work and what role city regions play in the future development of regional policy In conclusion it recommended the Government should commit itself to a clear city regions policy indicating the extent of city region feasibility and the powers and resources which will be made available so that this alternative to regional governance can be properly explored
