Regions of Recent Star Formation R.S. Bohn,P.E. Dewdney,2012-12-06 The symposium on Neutral Clouds near HII Regions was prompted by an obvious need to bring together workers specifically interested in the dynamical and photochemical effects in regions showing clear evidence of on going star formation This is currently an area of considerable research activity with much new observational material over the wavelength range from X ray to radio Furthermore the field is beginning to mature No longer is molecular spectroscopy concerned only with the search for new lines and with preliminary surveys No longer are evolving HII regions modelled with the naive assumption of constant density Similarly ideas of successive star formation champagne and blister models of HII regions and refinements to abundance calculations are examples which show that theoretical initiative is keeping pace We were both surprised and gratified by the number of contributed papers and the extent to which they addressed the subject matter In the proceedings we have grouped these papers near the most appropriate of the four invited review papers The subjects of these reviews are in the general areas of Evolution of HII Regions Dynamical Interactions Chemistry in Active Regions and Infrared and Maser Sources The symposium comprised 42 orally presented papers and 23 poster papers All but two are reproduced in this volume Rural Inequality in Divided Russia Stephen Wegren,2013-07-24 This book examines economic and political polarisation in post

Soviet Russia and in particular analyses the development of rural inequality It discusses how rural inequality has developed in post Soviet Russia and how it differs from the Soviet period and goes on to look at the factors that affect rural stratification and inequality using human and social capital profession gender and village location as independent variables The book uses survey data from rural households and fieldwork in Russia in order to highlight the multiplicity of divisions that act as fault lines in contemporary rural Russia

Antennas and Propagation for Wireless Communication Systems Simon R. Saunders,Alejandro A. Aragón-Zavala,2024-09-11 Comprehensive resource describing both fundamentals and practical industry applications of antennas and radio propagation employed in modern wireless communication systems The newly revised and thoroughly updated Third Edition of this classic and popular text Antennas and Propagation for Wireless Communication Systems addresses fundamentals and practical applications of antennas and radio propagation commonly used in modern wireless communication systems from the basic electromagnetic principles to the characteristics of the technology employed in the most recent systems deployed with an outlook of forthcoming developments in the field Core topics include fundamental electromagnetic principles underlying propagation and antennas basic concepts of antennas and their application to specific wireless systems propagation measurement modelling and prediction for fixed links macrocells microcells femtocells picocells megacells and narrowband and wideband channel modelling with the effect of the channel on communication system performance Worked examples and specific assignments for students are presented throughout the text with a solutions manual available for course tutors with a dedicated website containing online calculators and additional resources plus details of simple measurements that students can perform with off the shelf equipment such as their laptops and a Wi-Fi card This Third Edition of Antennas and Propagation for Wireless Communication Systems has been thoroughly revised and updated expanding on and adding brand new coverage of sample topics such as Maxwell's equations and EM theory multiple reflections as propagation mechanisms and waveguiding HAPS High Altitude Platforms propagation design and noise considerations of earth stations macrocell models and cellular base station site engineering FSS frequency selective surfaces adaptive antenna theory developments massive and distributed MIMO in particular and how to process raw data related to channel measurements for mobile radio systems The techniques used in mobile systems spanning the latest 4G 5G and 6G technology generations A wider range of frequencies extending from HF VHF and UHF up to the latest millimetre wave and sub-terahertz bands With comprehensive coverage of foundational subject matter as well as major recent advancements in the field Antennas and Propagation for Wireless Communication Systems is an essential resource for undergraduate and postgraduate students researchers and industry engineers in related disciplines

Advances in Cognitive Neuroscience of Numerical and Mathematical Processing Filip Van Opstal,Seppe Santens,Daniel

Ansari,2012-09-12 In this special issue the most recent advances in the domain of numerical cognition will be presented During the last decades our understanding of how numbers are processed increased dramatically with the arrival of different imaging techniques and neurophysiological experiments in humans and monkeys We are now starting to build up a clearer picture of how numbers are represented in the brain how this representation develops in the course of a lifetime how numbers are embedded in other cognitive features like attention spatial memory etc and how this eventually leads to our capability to perform complex mathematics Ultimately this accumulation of knowledge might provide us with an understanding of why numbers are problematic for some people This special issue deals with all aspects of numerical cognition findings on the basic neural responses to magnitudes the link between numbers space time attention action etc mathematical processing numerical development in healthy and clinical populations This special issue solicits contributions from the field of neurobiology neuropsychology and behavioral and computational neuroscience that will increase our understanding of the neural mechanisms underlying numerical cognition **Diarrhoeal Diseases Research** ,1991-09

functions to neural underpinnings Korbinian Moeller,Elise Klein,Klaus F Willmes - von Hinckeldey,Karin Kucian,2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included

empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers

OECD Rural Studies Rural Well-being Geography of Opportunities OECD,2020-10-05 Rural Well being Geography of Opportunities presents the latest iteration on this policy framework reflecting several important changes in rural development in recent years Fully taking into account the variety of situations characterising rural regions the new policy framework leverages improved data and analysis while broadening the scope from economic focus to encompass the environmental and social dimensions of well being

OECD Regions and Cities at a Glance 2022 OECD,2022-11-15 OECD Regions and Cities at a Glance presents indicators on individual regions and cities since the turn of the new millennium It provides a comprehensive picture of past successes and likely challenges that regions and cities in OECD members and partner countries will face in their efforts to build stronger more sustainable and more resilient economies

Kappa Distributions George Livadiotis,2017-04-19 Kappa Distributions Theory and Applications in Plasmas presents the theoretical developments of kappa distributions their applications in plasmas and how they affect the underpinnings of our understanding of space and plasma physics astrophysics and statistical mechanics thermodynamics Separated into three major parts the book covers theoretical methods analytical methods in plasmas and applications in space plasmas The first part of the book focuses on basic aspects of the statistical theory of kappa distributions beginning with their connection to the solid backgrounds of non extensive statistical mechanics The book then moves on to plasma physics and is devoted to analytical methods related to kappa distributions on various basic plasma topics spanning linear nonlinear plasma waves solitons shockwaves and dusty plasmas The final part of the book deals with applications in space plasmas focusing on applications of theoretical and analytical developments in space plasmas from the heliosphere and beyond in other astrophysical plasmas Kappa Distributions is ideal for space plasma and statistical physicists geophysicists

especially of the upper atmosphere Earth and planetary scientists and astrophysicists Answers important questions such as how plasma waves are affected by kappa distributions and how solar wind magnetospheres and other geophysical space and astrophysical plasmas can be modeled using kappa distributions Presents the features of kappa distributions in the context of plasmas including how kappa indices temperatures and densities vary among the species populations in different plasmas Provides readers with the information they need to decide which specific formula of kappa distribution should be used for a certain occasion and system toolbox **The State of Food and Agriculture** Food and Agriculture Organization of the United Nations,1963

Nonlinear Systems, Vol. 2 Juan F. R. Archilla,Faustino Palmero,M. Carmen Lemos,Bernardo Sánchez-Rey,Jesús Casado-Pascual,2017-12-21 This book presents an overview of the most recent advances in nonlinear science It provides a unified view of nonlinear properties in many different systems and highlights many new developments While volume 1 concentrates on mathematical theory and computational techniques and challenges which are essential for the study of nonlinear science this second volume deals with nonlinear excitations in several fields These excitations can be localized and transport energy and matter in the form of breathers solitons kinks or quodons with very different characteristics which are discussed in the book They can also transport electric charge in which case they are known as polarobreathers or solelectrons Nonlinear excitations can influence function and structure in biology as for example protein folding In crystals and other condensed matter they can modify transport properties reaction kinetics and interact with defects There are also engineering applications in electric lattices Josephson junction arrays waveguide arrays photonic crystals and optical fibers Nonlinear excitations are inherent to Bose Einstein Condensates constituting an excellent benchmark for testing their properties and providing a pathway for future discoveries in fundamental physics Structural, Syntactic, and Statistical Pattern Recognition Dit-Yan Yeung,2006-08-03 This is the proceedings of the 11th International Workshop on Structural and Syntactic Pattern Recognition SSPR 2006 and the 6th International Workshop on Statistical Techniques in Pattern Recognition SPR 2006 held in Hong Kong August 2006 alongside the Conference on Pattern Recognition ICPR 2006 38 revised full papers and 61 revised poster papers are included together with 4 invited papers covering image analysis character recognition bayesian networks graph based methods and more
