*International Series of Monographs in Pure and Applied Mathematics*, 1969 **Geometric Measure Theory** Frank Morgan, 2000-08-22 Geometric measure theory has become increasingly essential to geometry as well as numerous and varied physical applications The third edition of this leading text reference introduces the theory the framework for the study of crystal growth clusters of soap bubbles and similar structures involving minimization of energy Over the past thirty years this theory has contributed to major advances in geometry and analysis including for example the original proof of the positive mass conjecture in cosmology This third edition of *Geometric Measure Theory A Beginner's Guide* presents for the first time in print the proofs of the double bubble and the hexagonal honeycomb conjectures Four new chapters lead the reader through treatments of the Weaire Phelan counterexample of Kelvin's conjecture Almgren's optimal isoperimetric inequality and immiscible fluids and crystals The abundant illustrations examples exercises and solutions in this book will enhance its reputation as the most accessible introduction to the subject **Regular Figures** L. Fejes Tóth, 2014-07-10 *Regular Figures* concerns the systematology and genetics of regular figures The first part of the book deals with the classical theory of the regular figures This topic includes description of plane ornaments spherical arrangements hyperbolic tessellations polyhedral and regular polytopes The problem of geometry of the sphere and the two dimensional hyperbolic space are considered Classical theory is explained as describing all possible symmetrical groupings in different spaces of constant curvature The second part deals with the genetics of the regular figures and the inequalities found in polygons also presented as examples are the packing and covering problems of a given circle using the most or least number of discs The problem of distributing  $n$  points on the sphere for these points to be placed as far as possible from each other is also discussed The theories and problems discussed are then applied to pollen grains which are transported by animals or the wind A closer look into the exterior composition of the grain shows many characteristics of uniform distribution of orifices as well as irregular distribution A formula that calculates such packing density is then explained More advanced problems such as the genetics of the protean regular figures of higher spaces are also discussed The book is ideal for physicists mathematicians architects and students and professors in geometry *Using the Mathematics Literature* Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathematics and details methods of access to primary literature sources of new research applications results and techniques *Using the Mathematics Literature* is the most comprehensive and up to date resource on mathematics literature in both print and electronic formats presenting time saving strategies for retrieval of the latest information *A Collection of Problems on Mathematical Physics* B. M. Budak, A. A. Samarskii, A. N. Tikhonov, 2013-10-22 *A Collection of Problems on Mathematical*

Physics is a translation from the Russian and deals with problems and equations of mathematical physics The book contains problems and solutions The book discusses problems on the derivation of equations and boundary condition These Problems are arranged on the type and reduction to canonical form of equations in two or more independent variables The equations of hyperbolic type concerns derive from problems on vibrations of continuous media and on electromagnetic oscillations The book considers the statement and solutions of boundary value problems pertaining to equations of parabolic types when the physical processes are described by functions of two three or four independent variables such as spatial coordinates or time The book then discusses dynamic problems pertaining to the mechanics of continuous media and problems on electrodynamics The text also discusses hyperbolic and elliptic types of equations The book is intended for students in advanced mathematics and physics as well as for engineers and workers in research institutions

A Collection of Problems on a Course of Mathematical Analysis G. N. Berman, 2016-06-06 A Collection of Problems on a Course of Mathematical Analysis is a collection of systematically selected problems and exercises with corresponding solutions in mathematical analysis A common instruction precedes a group of problems of the same type Problems with a physics content are preceded by the necessary physical laws In the case of more or less difficult problems hints are given in the answers This book is comprised of 15 chapters and begins with an overview of functions and methods of specifying them notation for and classification of functions elementary investigation of functions and trigonometric and inverse trigonometric functions The following chapters deal with limits and tests for their existence differential calculus with emphasis on derivatives and differentials functions and curves definite and indefinite integrals and methods of evaluating definite integrals Some applications of the integral in geometry statics and physics are also considered along with functions of several variables multiple integrals and iterated integration line and surface integrals and differential equations The final chapter is devoted to trigonometric series This monograph is intended for students studying mathematical analysis within the framework of a technical college course

*A Course of Higher Mathematics* V. I. Smirnov, 2014-07-10 International Series of Monographs in Pure and Applied Mathematics Volume 62 A Course of Higher Mathematics V Integration and Functional Analysis focuses on the theory of functions The book first discusses the Stieltjes integral Concerns include sets and their powers Darboux sums improper Stieltjes integral jump functions Helly's theorem and selection principles The text then takes a look at set functions and the Lebesgue integral Operations on sets measurable sets properties of closed and open sets criteria for measurability and exterior measure and its properties are discussed The text also examines set functions absolute continuity and generalization of the integral Absolutely continuous set functions absolutely continuous functions of several variables supplementary propositions and the properties of the Hellinger integral are presented The text also focuses on metric and normed spaces Separability compactness linear functionals conjugate spaces and operators in normed spaces are underscored The book also discusses Hilbert space Linear functionals projections axioms of the space sequences of operators

and weak convergence are described The text is a valuable source of information for students and mathematicians interested in studying the theory of functions

**Mathematical Foundations of Thermodynamics** R. Giles, 2016-01-22 Mathematical Foundations of Thermodynamics details the core concepts of the mathematical principles employed in thermodynamics The book discusses the topics in a way that physical meanings are assigned to the theoretical terms The coverage of the text includes the mechanical systems and adiabatic processes topological considerations and equilibrium states and potentials The book also covers Galilean thermodynamics symmetry in thermodynamics and special relativistic thermodynamics The book will be of great interest to practitioners and researchers of disciplines that deal with thermodynamics such as physics engineering and chemistry

**Non-Linear Differential Equations** G. Sansone, R. Conti, 2016-06-06 International Series of Monographs in Pure and Applied Mathematics Volume 67 Non Linear Differential Equations Revised Edition focuses on the analysis of the phase portrait of two dimensional autonomous systems qualitative methods used in finding periodic solutions in periodic systems and study of asymptotic properties The book first discusses general theorems about solutions of differential systems Periodic solutions autonomous systems and integral curves are explained The text explains the singularities of Briot Bouquet theory The selection takes a look at plane autonomous systems Topics include limiting sets plane cycles isolated singular points index and the torus as phase space The text also examines autonomous plane systems with perturbations and autonomous and non autonomous systems with one degree of freedom The book also tackles linear systems Reducible systems periodic solutions and linear periodic systems are considered The book is a vital source of information for readers interested in applied mathematics
