Regulating Chemical Accumulation In The Environment:

Regulating Chemical Accumulation in the Environment Timothy M. Swanson, Marco Vighi, 1998-12-10 The environment has become exposed to a range of damaging contaminants from a wide variety of sources Regulation of and legislation against offending parties has frequently been hampered because of the difficulty of co operation between disparate disciplines in the natural social and political sciences This volume forms the conclusion of five years collaboration between toxicologists economists and lawyers in the understanding and solution of the problem of accumulative chemicals As well as a case study of the accumulation of pesticides in groundwater in one particular region the European Union the book forms a general study of the value of interdisciplinary approaches in environmental policy making The volume will be a valuable resource for a broad group of academics and researchers in the area of environmental science and environmental policy It will also form a useful supplementary reference text for courses in environmental policy science economics and toxicology

Regulation for Chemical Safety in Europe: Analysis, Comment and Criticism D.M. Pugh, J.V. Tarazona, 2013-04-17 Many European Union Directives seek to minimize the potential for harm to humans and the environment arising from the use of chemicals This book takes an interdisciplinary selective look at the effector mechanisms employed in such directives It covers the pre marketing use of toxicology to identify the hazardous properties of chemicals acknowledging its shortcomings while contrasting the scientific method with the precautionary principle in developing risk management practices The book then goes on to describe the use of bio indicators chemical analyses and mathematical modelling for prediction or to determine the adequacy of chemical safety legislation The environmental risk assessment of priority chemicals is described and the impact of pesticides on sustainability in agriculture is discussed from the differing standpoints of agronomy and economics Audience All professionals concerned with the safe management of chemicals and their use including teachers practitioners policy makers or legislators

approaches to ecosystem management which has created a subsequent need for real understanding of the scope and the limits of the economic approaches to ecosystems and

Current Issues in the Economics of Water Resource

Management P. Pashardes, T.M. Swanson, A. Xepapadeas, 2013-04-17 The marginal price elasticities estimated by Martinez Espineira conforms to expectation The price specification that accounts for the changing proportion of water users in each block yields a higher elasticity 0.47 compared to the specification ignoring this feature of the data However this difference is not found to be statistically significant a result attributed to the low power of the test small sample size limiting the accuracy of estimates In conclusion the paper provides a theoretically correct price specification for demand functions under block pricing and aggregate data The empirical findings in the paper however are not conclusive and further empirical work using more data and alternative nonlinear demand functions is needed to show the practical implications of the arguments put forward by the Martinez Espineira's paper Static empirical consumer demand functions estimated with aggregate data are well known to suffer from serial correlation and other statistical problems associated with misspecified dynamics These dynamics arise because consumers do not react immediately to a change in prices due to their largely predetermined lifestyle In the case of demand for water for example current purchases can be largely predetermined due to commitments arising from past purchases such as swimming pools bathtubs dishwashing machines etc Muellbauer and Pashardes 1992 show that the autoregressive nature of consumer demand data can be captured in a theoretically consistent manner by incorporating intertemporal aspects of consumer behaviour in the model through habit formation and durability

Transferable Groundwater Rights Andreas N. Charalambous, 2013-10-28 The principle of transferable groundwater rights is that by making water rights capable of being traded in the market water resources can be used more sustainably and efficiently Groundwater would achieve its economic value by switching from the high volume low value irrigation which is prevalent with many farmers particularly in South Asia to low volume high value urban supply or the growing of intensive horticultural or cash crops This book discusses transferable groundwater rights in their broader context It starts with a detailed description of the physical aspects of groundwater which non technical readers should find useful followed by a discussion of legal and economic aspects Water transfers and the international experiences in transferable groundwater rights are dealt with in detail in two subsequent chapters A model is presented to guide those involved in water resources management and planning in their decision process to introduce transferable groundwater rights and water rights trading The author concludes that transferable groundwater rights potentially offer a better alternative to land based water rights systems However he casts serious doubt on whether groundwater rights trading on its own can achieve water resources sustainability environmental protection and social equity Government intervention seems to be almost always needed to assist the water rights market and take responsibility for any of its adverse consequences

Contingent Valuation R. Carson, 2012-01-01 This major reference work the first of its kind provides a comprehensive and authoritative introduction to the large and

growing literature on contingent valuation It includes entries on over 7 500 contingent valuation papers and studies from over 130 countries covering both the published and grey literatures This book provides an interpretive historical account of the development of contingent valuation the most commonly used approach to placing a value on goods not normally sold in the marketplace The major fields catalogued here include culture the environment and health application This bibliography is an ideal starting point for researchers wanting to find other studies that have valued goods or used techniques similar to those they are interested in For those wanting to conduct meta analyses the book will serve as an invaluable guide to source material For those wanting to conduct meta analyses the book will serve as an invaluable guide to source material In addition to the print edition we offer access for purchasers of the book to a website providing the contents of as a searchable Word document and in a variety of standard bibliographic database forms Contingent Valuation is an indispensable reference source for researchers scholars and policymakers concerned with survey approaches to the problem of environmental valuation

Stumbling Toward Sustainability John C. Dernbach,2002 In 1992 at the United Nations Conference on Environment and Development in Rio de Janeiro the nations of the world agreed to implement an ambitious plan for ecologically sustainable human development This book is a comprehensive review of U S efforts to achieve such development since Rio The U S has unquestionably begun to take steps toward sustainable development Yet the nation is now far from being a sustainable society and in many respects is farther away than it was in 1992 Nevertheless legal and policy tools are available to put the U S on a direct path to sustainability This book brings together 42 distinguished experts from a variety of backgrounds and academic disciplines It is among the most thorough assessments ever conducted of U S law and policy concerning the environment

The Regulation of Environmental Factors on the Microbial Cooperation Hao Li,Ruichang Gao,Wei Hu,Zhenlin Han,2024-12-12 Microorganisms are widely presented in various environments such as soil water air inside or on the surface of multi cellular organisms and food There are various complicated microbial interactions including symbiosis mutualism competition antagonism and predation among the different microorganisms that coexist in the same environment forming a community These complex microbial interactions can affect various cellular behaviors such as

microbial growth metabolism performance and social behavior Social behavior refers to the evolving specialization and cooperation that takes place between group members to jointly survive and understanding this cooperation evolution is still a challenge for biology and social science According to the impact experienced by the implementer and receiver social behavior can be roughly divided into four categories mutually beneficial selfish altruistic and malicious Cooperation increases the adaptability of the recipient and can be mutually beneficial or just altruistic Cooperation has been widely studied from insects to humans but its impact on microbial populations has only been described recently Social behavior models based on dynamics and evolutionary behavior such as the snowdrift and prisoner s dilemma models have been described in microorganisms Moreover microbial cooperation is also influenced by the environmental factors in which they are located Studying the role of environmental factors on microbial cooperation from the perspective of environment microorganism interaction is of great importance for clarifying mechanisms underlying microbial cooperation and its roles

The Precautionary Principle in the 20th Century Paul Harremoes,David Gee,Malcom MacGarvin,Andy Stirling,Jane Keys,Brian Wynne,Sofia Guedes Vaz,2013-10-11 The precautionary principle is widely seen as fundamental to successful policies for sustainability It has been cited in international courts and trade disputes between the USA and the EU and invoked in a growing range of political debates Understanding what it can and cannot achieve is therefore crucial This volume looks back over the last century to examine the role the principle played or could have played in a range of major and avoidable public disasters From detailed investigation of how each disaster unfolded what the impacts were and what measures were adopted the authors draw lessons and establish criteria that could help to minimise the health and environmental risks of future technological economic and policy innovations This is an informative resource for all those from lawyers and policy makers to researchers and students needing to understand or apply the principle *Regulating Chemical Risks* Johan Eriksson,Michael Gilek,Christina Rudén,2010-08-18 This volume presents research on current trends in chemical regulations a fa growing complex and increasingly internationalized field The book grew out from a multidisciplinary research project entitled *Regulating Chemical Risks in the Baltic Sea Area* Science Politics and the Media led by Michael Gilek at S dert rn University Sweden This research project involved scholars and experts from natural as well as social sciences based at S dert rn University Swedish Royal Institute of Technology KTH Karolinska Institutet and Ume University The project group organized a multidisciplinary research conference on chemical risk regulations held in Stockholm August 15 17 2007 Most of the contributions published in this book were in draft form first presented at this conference The conference like the ensuing edited volume expanded the geographical focus beyond the Baltic Sea area to include wider European and to some extent also global trends Many thanks to all project colleagues and conference participants We are very grateful for the generous financial support received from The Foundation for Baltic and East European Studies stersj stiftelsen The Swedish Research Council Formas and from S dert rn University Without this support the present book would

not have been possible Special thanks to all of our fellow contributors all of whom have submitted to cal papers based on high quality research Many thanks also to Tobias Evers who assisted us with technical editing Finally we are grateful for the professionalism shown by our editors at Springer

Marine Radioecology, Volume 6 Jean-Claude Amiard, 2023-01-12 The marine environment in addition to a not insignificant background of natural radioactivity has continued to receive inputs of radionuclides directly or indirectly through atomic fallout discharges from the nuclear industry or from nuclear accidents After their introduction the fate of these radionuclides is complex with modifications of physicochemical forms dispersion in marine water masses and adsorption onto sedimentary particles Marine organisms then bioaccumulate these radionuclides to a greater or lesser extent dispersing them via their burrowing activities horizontal and vertical migrations or through food webs All of these phenomena lead to very variable radioactive contamination depending on location and the nature of the marine environments concerned and consequently to very different doses of irradiation to marine organisms The harmful effects of ionizing radiation on living marine organisms are felt at varying levels of biological organization from the molecule to the ecosystem passing through the cell the organ the individual and the population In the end the radioactive risk for marine organisms can decline according to several situations which can be normal programmed or accidental

Stress and Environmental Regulation of Gene Expression and Adaptation in Bacteria Frans J. de Bruijn, 2016-07-01 Bacteria in various habitats are subject to continuously changing environmental conditions such as nutrient deprivation heat and cold stress UV radiation oxidative stress dessication acid stress nitrosative stress cell envelope stress heavy metal exposure osmotic stress and others In order to survive they have to respond to these conditions by adapting their physiology through sometimes drastic changes in gene expression In addition they may adapt by changing their morphology forming biofilms fruiting bodies or spores filaments Viable But Not Culturable VBNC cells or moving away from stress compounds via chemotaxis Changes in gene expression constitute the main component of the bacterial response to stress and environmental changes and involve a myriad of different mechanisms including alternative sigma factors bi or tri component regulatory systems small non coding RNA s chaperones CHRIS Cas systems DNA repair toxin antitoxin systems the stringent response efflux pumps alarmones and modulation of the cell envelope or membranes to name a few Many regulatory elements are conserved in different bacteria however there are endless variations on the theme and novel elements of gene regulation in bacteria inhabiting particular environments are constantly being discovered Especially in pathogenic bacteria colonizing the human body a plethora of bacterial responses to innate stresses such as pH reactive nitrogen and oxygen species and antibiotic stress are being described An attempt is made to not only cover model systems but give a broad overview of the stress responsive regulatory systems in a variety of bacteria including medically important bacteria where elucidation of certain aspects of these systems could lead to treatment strategies of the pathogens Many of the regulatory systems being uncovered are specific but there is also considerable cross talk between different circuits Stress and Environmental

Regulation of Gene Expression and Adaptation in Bacteria is a comprehensive two volume work bringing together both review and original research articles on key topics in stress and environmental control of gene expression in bacteria Volume One contains key overview chapters as well as content on one two three component regulatory systems and stress responses sigma factors and stress responses small non coding RNAs and stress responses toxin antitoxin systems and stress responses stringent response to stress responses to UV irradiation SOS and double stranded systems repair systems and stress adaptation to both oxidative and osmotic stress and desiccation tolerance and drought stress Volume Two covers heat shock responses chaperonins and stress cold shock responses adaptation to acid stress nitrosative stress and envelope stress as well as iron homeostasis metal resistance quorum sensing chemotaxis and biofilm formation and viable but not culturable VBNC cells Covering the full breadth of current stress and environmental control of gene expression studies and expanding it towards future advances in the field these two volumes are a one stop reference for non medical molecular geneticists interested in gene regulation under stress
