Regulation of Wireless Communications Systems Frederick J. Day, Huong N. Tran, 1997 To find more information about Rowman and Littlefield titles please visit [www.rowmanlittlefield.com](http://www.rowmanlittlefield.com) **Wireless Communications Systems Design** Haesik Kim, 2015-10-12 em style mso bidi font style normal Wireless Communications Systems Design provides the basic knowledge and methodology for wireless communications design The book mainly focuses on a broadband wireless communication system based on OFDM OFDMA system because it is widely used in the modern wireless communication system It is divided into three parts wireless communication theory part I wireless communication block design part II and wireless communication block integration part III Written by an expert with various experience in system design standards research and development *Emerging Public Safety Wireless Communication Systems*, 2002 With the increasing need for more effective and efficient responses to man made and natural public safety threats the necessity for improved private mobile and commercial wireless digital communication systems has become apparent This one of a kind resource describes today s public safety communication requirements and radio systems from a technical perspective and shows you how communication systems are evolving to meet the growing demands of multimedia wireless applications **An Analysis of Regulatory Frameworks for Wireless Communications, Societal Concerns and Risk** Haim Mazar, 2009 This thesis analyses how and why culture and geography influence the allocation and licensing of the radio frequency RF spectrum in different nations Based on a broad comparative study of 235 countries an inter disciplinary approach is used to explore regulatory frameworks and attitudes toward risk In addition detailed case studies of the UK France the US and Ecuador provide deeper insights into the main contrasting regulatory styles Three alternative sociological theories are used to analyse and explain the results for both the in depth and broad brush studies The Cultural Theory of Mary Douglas and co workers is first used to categorise countries in terms of perceptual filters The empirical findings indicate some countries to be apparently exceptional in their behaviour The theory of Bounded Rationality is used to investigate and explain these apparent irrationalities Finally Rational Field Theory shows how beliefs and values guide administrations in their RF regulation A number of key factors are found to dominate and patterns emerge The European RF harmonisation is unique Following European unification wireless regulation is divided into two major camps the EU and the US which differ in their risk concerns approach to top down mandated standards allocation of RF spectrum to licence exempt bands and type approval process The adoption of 3G cellular UMTS versus CDMA2000 and digital TV standards DVB T ATSC ISDB T around the world reflects geopolitical and colonial influence The language of a country is a significant indicator of its analogue TV standard SECAM PAL NTSC Interestingly the longitude of a country to a fair extent defines RF allocation Africa and West Asia follow Europe whereas the Americas approximate the US RF regulation and risk tolerability differ between tropical and non tropical climates The collectivised centralised versus the individualised market based rationalities result in different regulatory

frameworks and contrasting societal and risk concerns The success of the top down European GSM and the bottom up Wi Fi standards reveal how the central planning and market based approaches have thrived Attitudes to RF human hazards and spurious emissions levels reveal that the US Canada and Japan are more tolerant of these radiation risks than Europe Australia Canada New Zealand UK and USA encourage technological innovation A practical benefit of this study is that it will give regulators more freedom to choose a rational RF licensing protocol by better understanding the possibly self imposed boundaries of cultural and geographical factors which are currently shaping allocation Academically there is utility in undertaking a cultural and geographic analysis of a topic that is mostly the domain of engineering economic and legal analysts
