INTRODUCTION

Cognitive-Motor Development and Dysfunction

Little difference exists between the development of cognitive and motor function in childhood and the relearning of cognitive and motor function post-trauma in adulthood. "Rehabilitation recapitulates phylogeny." In all cases, function must either be learned or re-learned. That learning developmentally is associated with the formation and integration of motor and cognitive milestones.

Motor and Cognitive Effects of Inhibition and Disinhibition as a Basis for Cognitive Rehabilitation

It has been known that individuals who are markedly late in achieving developmental milestones are at high risk for subsequent cognitive impairment [1,2]. The mechanisms underlying infant and adult motor and cognitive associations remain poorly characterized. One possibility is that the

Rehabilitation Of Cognitive Disabilities:

The Rehabilitation of Cognitive Disabilities Charles J. Long, J.M. Williams, 2012-12-06 The rehabilitation of intellectual impairment resulting from brain injury has become a major professional activity of clinical neuropsychologists. In recent years, neuropsychology has developed from a professional role stressing assessment and diagnosis to one that now includes treatment and rehabilitation activities. Such trends are also manifested in two new research interests of neuropsychologists: the study of the generalizability of neuropsychological test findings to everyday abilities, often referred to as the ecological validity of tests, and outcome studies of cognitive retraining treatments. Discovering the relationships between traditional neuropsychological tests and everyday behavior is important because the referral questions posed to neuropsychologists have changed. Now the neuropsychologist is asked to comment on the patient's functional intellectual abilities as they relate to the everyday demands of home work and educational settings. Of course, the development of cognitive retraining theory and procedures allows neuropsychologists to intervene in the treatment of the cognitive problems that the neuropsychological evaluation has documented. Since these approaches are still in their formative stages, they have been the subject of clinical lore, great controversy, and little systematic research. This situation prompted one of our presenters to lament: Either you believe Cognitive Retraining is divinely inspired or the work of the devil. There is apparently little middle ground. Given this state of affairs, the program committee of the Mid South Conference on Human Neuropsychology decided to focus on the role of neuropsychologists in rehabilitation.

Handbook of Clinical Trials P. Brouwers, E. Mohr, 1991-01-01 Behavior is an aspect of clinical trials that has been somewhat neglected, and the problems associated with behavioral assessment and control in clinical trials are complex. These contributions deal with the selection and application of assessment techniques in different patient populations.

Rehabilitation Engineering Alex Mihailidis, Roger Smith, 2022-11-15 This book will provide an overview of the rehabilitation engineering field, including key concepts that are required to provide a solid foundation about the discipline. It will present these concepts through a mix of basic and applied knowledge from rehabilitation engineering research and practice. It is written as an introductory text in order to provide access to the field by those without previous experience or background in the field. These concepts will include those related to engineering and health that are necessary to understand the application of rehabilitation engineering to support human function.

The Oxford Handbook of Philosophy and Disability Adam Cureton, David Wasserman, 2020 This Handbook introduces philosophers as well as other scholars in the humanities and social sciences to one of the most dynamic new areas of philosophical inquiry. Disability raises some of the deepest conceptual and normative issues about human embodiment and well-being, dignity, respect, justice, and equality, and personal and social identity. But it also raises pressing practical questions for educational, health, reproductive, and technology policy, and confronts controversial questions about the scope and direction of the human and civil rights movements. The Handbook addresses these issues and more with

contributions from some of the most prominent philosophers in the field The clarity it brings to these discussions demonstrates fully the continued centrality and importance of philosophical inquiry

ICT for assessment and rehabilitation in Alzheimer's disease and related disorders Philippe Robert,Sophia Antipolis,Iracema Leroi,Valeria Manera,2016-06-21 Information and Communication Technologies ICT are no longer objects gathering dust on a shelf instead they have become intrinsic in our everyday lives They are now even taking on an indispensable role in many clinical and rehabilitation settings In the past decade there has been a surge of interest in using ICT with elderly people both with and without dementia in various clinical and research settings On the one hand ICT can supplement the assessment of functional ability by more precisely evaluating the nature and extent of functional impairment on the other hand ICT can be used to support elderly people in their everyday activities as well as to ameliorate symptoms and improve quality of life through stimulation and rehabilitation This is the

intention driving the development of Serious Games SG which are digital applications often based on Virtual Reality specifically adapted for purposes other than entertaining including rehabilitation training and education Finally ICT can also play a key role in the development of interactive educational programs to support caregivers of people living with dementia A handful of interesting studies have started to investigate the effectiveness of employing ICT in people with different types of dementia such as Alzheimer s disease AD It is therefore timely to attempt to scope this newly emerging field as well as to foster a dialogue among the different professionals including academics clinicians and computer engineers working in the area With this in mind the Research Topic ICT for assessment and rehabilitation in Alzheimer s disease and related disorders aims to provide new and interesting insights into the current use of ICT in healthy and pathological aging The intent is also to identify challenges and new perspectives in the field gather recommendations for the application of ICT in AD and related disorders in clinical practice and to showcase cutting edge clinical research The articles included in this Frontier Research Topics have more than achieved this aim and are a perfect illustration of how ICT can be used to enhance the lives of people living dementia and their caregivers
