Twareque Ali,Anatol Odziejewicz,Martin Schlichenmaier,Theodore Voronov,2012-11-05 The Biowie workshops on Geometric Methods in Physics are among the most important meetings in the field Every year some 80 to 100 participants from both mathematics and physics join to discuss new developments and to interchange ideas This volume contains contributions by selected speakers at the XXX meeting in 2011 as well as additional review articles and shows that the workshop remains at the cutting edge of ongoing research The 2011 workshop focussed on the works of the late Felix A Berezin 1931 1980 on the occasion of his 80th anniversary as well as on Bogdan Mielnik and Stanisław Lech Woronowicz on their 75th and 70th birthday respectively The groundbreaking work of Berezin is discussed from today's perspective by presenting an overview of his ideas and their impact on further developments He was among other fields active in representation theory general concepts of quantization and coherent states supersymmetry and supermanifolds Another focus lies on the accomplishments of Bogdan Mielnik and Stanisław Lech Woronowicz Mielnik's

geometric approach to the description of quantum mixed states the method of quantum state manipulation and their important implications for quantum computing and quantum entanglement are discussed as well as the intricacies of the quantum time operator Woronowicz fruitful notion of a compact quantum group and related topics are also addressed

Exact Solutions and Scalar Fields in Gravity Alfredo Macías,Jorge L.

Cervantes-Cota,Claus Lämmerzahl,2007-05-08 Divided into four parts this book covers recent developments in topics pertaining to gravity theories including discussions on the presence of scalar fields Part One is devoted to exact solutions in general relativity and is mainly concerned with the results of rotating null dust beams and fluids Also included is a panoramic vision of new research directions in this area which would require revising certain theorems and their possible extensions within gravity theories new aspects concerning the Ernst potentials double Kerr spacetimes and rotating configurations In particular there is a detailed discussion of totally symmetric and totally geodesic spaces in which a method for generating 2 1 dimensional solutions from 3 1 dimensional solutions is given Part Two deals with alternative theories of gravity all of which include scalar fields and gauge fields Here quantum and cosmological effects which arise from both gravity theories in four and higher dimensions and from metric affine theories are investigated Part Three is devoted to cosmological and inflationary scenarios Local effects such as the influence of scalar fields in protogalactic interactions numerical studies of the collapse of molecular cores as well as the inverse inflationary problem and the blue eigenvalue spectrum of it are considered Moreover the role of scalar fields as dark matter and quantum cosmology in the Bergman Wagoner and Gowdy theories together with the relation of the conformal symmetry and deflationary gas universe are likewise presented The last part of the book includes some mixed topics which are still in the experimental stage Among them are the foundation of the Maxwell theory a discussion on electromagnetic Thirring problems a note on the staticity of black holes with non minimally coupled scalar fields and a study of the Lorentz force free charged fluids in general relativity Thus this book is the most up to date comprehensive collection of papers on the subject of exact solutions and scalar fields in gravity and is a valuable tool for researchers in the area

Einstein and the Changing Worldviews of Physics Christoph Lehner,Jürgen Renn,Matthias

Schemmel,2012-02-02 This volume reviews conceptual conflicts at the foundations of physics now and in the past century

The focus is on the conditions and consequences of Einstein's pathbreaking achievements that sealed the decline of the classical notions of space time radiation and matter and resulted in the theory of relativity Particular attention is paid to the implications of conceptual conflicts for scientific views of the world at large thus providing the basis for a comparison of the demise of the mechanical worldview at the turn of the 20th century with the challenges presented by cosmology at the turn of the 21st century Throughout the work Einstein's contributions are not seen in isolation but instead set into the wider intellectual context of dealing with the problem of gravitation in the twilight of classical physics the investigation of the historical development is carried out with a number of epistemological questions in mind concerning in particular the

transformation process of knowledge associated with the changing worldviews of physics **Deserfest** Stanley Deser, James T. Liu, 2006 This volume comprises the contributions to the proceedings of Deserfest OCo a festschrift in honor of Stanley Deser Many of Stanley Deser's colleagues and longtime collaborators including Richard Arnowitt and Charles Misner of OC ADMOCO fame contribute insightful articles Ranging from lower dimensional gravity theories all the way to supergravity in eleven dimensions and M theory the papers highlight the wide impact that Deser has had in the field Contents Some Results in M Theory Inspired Phenomenology R Arnowitt et al A Non Geometric Approach to 11 Dimensional Supergravity L Brink Generalized Holonomy in M Theory A Batrachenko et al Electric Magnetic Duality in Gravity M Henneaux R 4 Terms in Supergravity and M Theory P Howe Marriage of 4 Dimensional Gravity to the 3 Dimensional Chern Simons Term R Jackiw Some Applications of the ADM Formalism J E Nelson The Main Postulates and Results of Loop Quantum Gravity L Smolin Milne and Torus Universes Meet A Waldron Diquarks as Inspiration and as Objects F Wilczek and other papers Readership Researchers in the field of high energy physics gravitation and supersymmetry **American Book Publishing Record**, 2006 *Recent Developments In Gravitation And Mathematical Physics - Proceedings Of The First Mexican School On Gravitation And Mathematical Physics* Alfredo Macias, T Matos, O Obregon, H Quevedo, 1996-05-25 These proceedings contain lecture notes on computer algebra cosmological models quantum cosmology and black hole physics Several research articles which cover different aspects of classical cosmology exact solutions to Einstein's equations and quantum field theory are also included *Special Relativity* Jürgen Ehlers, Claus Lämmerzahl, 2006-09-11 After a century of successes physicists still feel the need to probe the limits of the validity of theories based on special relativity Canonical approaches to quantum gravity non commutative geometry string theory and unification scenarios predict tiny violations of Lorentz invariance at high energies The present book based on a recent seminar devoted to such frontier problems contains reviews of the foundations of special relativity and the implications of Poincaré invariance as well as comprehensive accounts of experimental results and proposed tests The book addresses besides researchers in the field everyone interested in the conceptual and empirical foundations of our knowledge about space time and matter
