Reliability Studies Curree Publication:

Reliability Studies David V. Rosowsky, Jun Hee Kim, 2002-04 This report summarizes the work conducted under Task 1 5 3 Reliability Studies part of Element 1 Testing and Analysis of the CUREE Caltech Woodframe Project The overall objective of Task 1 5 3 was to develop a risk based methodology for seismic design of shearwalls the primary lateral force resisting components in woodframe structures It was anticipated that such a methodology would be based on the reliability principles as well as the emerging performance based concept for seismic design The specific sub objectives of Task 1 5 3 were 1 to conduct a sequence of sensitivity studies to evaluate the contributions of various sources of uncertainty to shearwall performance as predicted using the CASHEW program developed in Task 1 5 1 2 to evaluate the variabilities in and thereby statistically characterize the peak response obtained using suite of ordinary ground motion records developed in Task 1 3 2 and 3 to develop a risk based procedure for performance based design of wood shearwalls Design charts developed using this procedure could be used to determine limits on the seismic weight to ensure target non exceedence probabilities for the different performance drift levels

Statistical Methods for QTL Mapping Zehua Chen, 2013-11-01 While numerous advanced statistical approaches have recently been developed for quantitative trait loci QTL mapping the methods are scattered throughout the literature Statistical Methods for QTL Mapping brings together many recent statistical techniques that address the data complexity of QTL mapping After introducing basic genetics topics and statistical principles the author discusses the principles of quantitative genetics general statistical issues of QTL mapping commonly used one dimensional QTL mapping approaches and multiple interval mapping methods He then explains how to use a feature selection approach to tackle a QTL mapping problem with dense markers The book also provides comprehensive coverage of Bayesian models and MCMC algorithms and describes methods for multi trait QTL mapping and eQTL mapping including meta trait methods and multivariate sequential procedures This book emphasizes the modern statistical methodology for QTL mapping as well as the statistical issues that arise during this process It gives the necessary biological background for statisticians without training in genetics and likewise covers statistical thinking and principles for geneticists Written primarily for geneticists and statisticians specializing in QTL mapping the book can also be used as a supplement in graduate courses or for self study by PhD students working on QTL mapping projects

Applications of Statistics and Probability in Civil Engineering Michael Faber, Jochen Koehler, Kazuyoshi Nishijima, 2011-07-15 Under the pressure of harsh environmental conditions and natural hazards large parts of the world population are struggling to maintain their livelihoods Population growth increasing land utilization and shrinking natural resources have led to an increasing demand of improved efficiency of existing technologies and the development of new ones
