Thinking Skills in the Primary Classroom , On Images John V. Kulvicki, 2006-08-03 Whether it was the demands of life leisure or a combination of both that forced our hands we have developed a myriad of artefacts maps notes descriptions diagrams flow charts photographs paintings and prints that stand for other things Most agree that images and their close relatives are special because in some sense they look like what they are about This simple claim is the starting point for most philosophical investigations into the nature of depiction On Images argues that this starting point is fundamentally misguided Whether a representation is an image depends not on how it is perceived but on how it relates to others within a system This kind of approach first championed by Nelson Goodman in his Languages of Art has not found many supporters in part because of weaknesses with Goodman's account On Images shows that a properly crafted structural account of pictures has many advantages over the perceptual accounts that dominate the literature on this topic In particular it explains the close relationship between pictures diagrams graphs and other kinds of non linguistic representation It undermines the claim that pictures are essentially visual by showing that audio recordings tactile line drawings and other non visual representations are pictorial Also by avoiding explaining images in terms of how we perceive them this account sheds new light on why pictures seem so perceptually special in the first place This discussion of picture perception recasts some old debates on the topic suggests further lines of philosophical and empirical research and ultimately leads to a new perspective on pictorial realism
