Power Indices and Coalition Formation M.J. Holler,Guillermo Owen,2013-06-29 In recent years publications on power indices and coalition formation have multiplied Obviously the application of these concepts to political institutions more specifically to the analysis of the European Union and as it seems the election of the President of the United States is getting more and more popular There are however also new theoretical instruments and perspectives that support these applications First of all the probabilistic model of coalition formation has to be mentioned which is made operational by the multilinear extension of the characteristic function form of coalition games This instrument triggered off a reinterpretation of existing power indices and the formulation of new indices This development is accompanied by an intensive discussion of the concept of power in general what do we measure when we apply power measures and the properties that an adequate measure of power has to satisfy Various concepts of monotonicity were proposed as litmus test The discussion shows that the underlying theories of coalition formation play a decisive role New results will be discussed in this volume Its contributions put flesh and blood on the theoretical innovations and their applications that led to a growing interest in power indices and coalition formation

Introducing Game Theory and its Applications Elliott Mendelson,2004-07-03 The mathematical study of games is an intriguing endeavor with implications and applications that reach far beyond tic tac toe chess and poker to economics business and even biology and politics Most texts on the subject however are written at the graduate level for those with strong mathematics economics or business backgrounds In a clear and refreshing departure from this trend Introducing Game Theory and its Applications presents an easy to read introduction to the basic ideas and techniques of game theory After a brief introduction the author begins with a chapter devoted to combinatorial games a topic neglected or treated minimally in most other texts The focus then shifts to two person zero sum games and their solution Here the author presents the simplex method based on linear programming for

solving these games and develops within his presentation the required background in linear programming The final chapter presents some of the fundamental ideas and tools of non zero sum games and games with more than two players including an introduction to cooperative game theory This book will not only satisfy the curiosity of those whose interest in the subject was piqued by the 1994 Nobel Prize awarded to Harsanyi Nash and Selten It also prepares its readers for more advanced study of game theory s applications in economics business and the physical biological and social sciences [An Introductory Course on Mathematical Game Theory and Applications](#) Julio González-Díaz, Ignacio García-Jurado, M. proposed mechanism is used as a benchmark to evaluate the fairness of the revenue sharing mechanisms where the alliance partners behave selfishly. Additionally, a new selfish revenue allocation rule is developed that improves the performance of the existing methods.

Firms in the International Economy Sjoerd Beugelsdijk, Steven Brakman, Hans Van Ees, Harry Garretsen, 2013-12-13. Essays by leading scholars suggest that insights from international business could enrich firm heterogeneity research in international economics. Despite their common roots, international economics (IE) and international business (IB) have developed into two distinct fields of study. Economists have directed their efforts at formalizing the workings of international trade and investment at the macroeconomic level; business scholars have relied more on data-driven conceptual narratives than mathematical tools. But the recent focus of IE literature on firm heterogeneity suggests that IE would benefit from IB analyses of the behavior and organization of the internationalizing firm. The contributions to this volume investigate ways that insights from IB can enrich IE research in firm heterogeneity. The contributors discuss firm-specific advantages in international trade and investment, considering the firm as the unit of analysis and managerial inputs as a variable in market entry decisions; analyze interactions between a firm and its external environment, including local corporate philanthropy and institutional settings; examine the boundaries of the firm and organizational choices such as the make or buy decision; and investigate technology transfer and innovation offshoring, discussing the role of subsidiaries, inventor employment, and other related topics. Although IE and IB look at international firms from different perspectives, these contributions make it clear that there is a potential for a productive exchange of insights and information between the two disciplines. Contributors: Laura Abramovsky, Carlo Altomonte, Sjoerd Beugelsdijk, Bruce Blonigen, Pamela Bombarda, Steven Brakman, Julia Darby, Rodolphe Desbordes, Filippo Di Mauro, Mar a Garc a Vega, Harry Garretsen, Elena Huergo, Florian Mayneris, Quyen T K Nguyen, Verena Nowak, Cheyney O Fallon, Gianmarco Ottaviano, Michael Pfl ger, Filomena Pietrovito, Sandra Poncet, Alberto Franco Pozzolo, Alan M Rugman, Armando Rungi, Stephan Russek, Davide Sala Luca Salvatici, Christian Schwarz, Roger Smeets, Jens Suedekum, Hans van Ees, Vincent Vicard, Ian Wooton, Erdal Yalcin.
