Growth Without Miracles Ross Garnaut, Yiping Huang, 2001 China s economic reform constitutes one of the most remarkable events of the second half of the twentieth century It not only significantly improved the living conditions of the Chinese population but also provides a useful model of economic transition from central planning to a market economy The gradual approach to reform adopted by the Chinese was widely regarded as suboptimal and likely to fail when compared to the shock therapy method applied in the former Soviet Union and the Eastern European economies But China has outperformed other transitional economies To many observers the Chinese experience is either a myth or a miracle This volume addresses key questions about the initial economic foundations the reform of macroeconomic policies and macroeconomic stability the achievements of agricultural reform and the agricultural policy choices facing the Chinese government the unique characteristics of the township and village enterprises the successful reform of the state owned enterprises the development of factor markets the contributions of the external sectors to economic growth the lessons of the Chinese

experience for transitional economies and the challenges for economic theory Growth without Miracles brings together thirty widely cited articles by prominent economists in the field of China studies to offer authoritative and thorough assessment and analyses of China's experience during the reform period It provides a complete story for teachers and students of courses on the Chinese economy and will be of considerable interest to researchers officials and business people who want to understand past experiences current problems and the future direction of the Chinese economy
