Shaya Pb 2004:

Palaeoproterozoic Supercontinents and Global Evolution Steven Michael Reddy, 2009 The Palaeoproterozoic era 2500 1600 Ma is a critical period of Earth history with dynamic evolution from the deep planetary interior to its surface environment Several lines of geological evidence suggest the existence of at least one pre Rodinia supercontinent named Nuna or Columbia which formed near the end of Palaeoproterozoic time Prior to this assembly there may have been an older supercontinent Kenorland or perhaps only independently drifting supercratons The tectonic records of amalgamation and dispersal of these ancient landmasses provide a framework that links processes of the deep Earth with those of its fluid envelope The sixteen papers in this volume present reviews and new analytical data that span the geological record of Palaeoproterozoic Earth The volume is useful as a reference book for students and professional geoscientists interested in this important period of global evolution
