Time of Our Lives Tom Kirkwood,2001-01-11 By the year 2050 one in five of the world s population will be 65 or older a fact which presages profound medical biological philosophical and political changes in the coming century In Time of Our Lives Tom Kirkwood draws on more than twenty years of research to make sense of the evolution of aging to explain how aging occurs and to answer fundamental questions like why women live longer than men He shows that we age because our genes evolving at a time when life was nasty brutish and short placed little priority on the long term maintenance of our bodies With such knowledge along with new insights from genome research we can devise ways to target the root causes of aging and of age related diseases such as Alzheimer s and osteoporosis He even considers the possibility that human beings will someday have greatly extended life spans or even be free from senescence altogether Beautifully written by one of the world s pioneering researchers into the science of aging Time of Our Lives is a clear original and above all inspiring investigation of a process all of us experience but few of us understand

Liberation Biology Ronald Bailey,2013-08 The 21st century will undoubtedly witness unprecedented advances in understanding the mechanisms of the human body and in developing biotechnology With the mapping of the human genome the pace of discovery is now on the fast track By the middle of the century we can expect that the rapid progress in biology and biotechnology will utterly transform human life What was once the stuff of science fiction may now be within reach in the not too distant future 20 to 40 year leaps in average life spans enhanced human bodies drugs and therapies to boost memory and speed up mental processing and a genetic science that allows parents to ensure that their children will have stronger immune systems more athletic bodies and cleverer brains Even the prospect of human immortality beckons Such scenarios excite many people and frighten or appall many others Already biotechnology opponents are organizing political movements aimed at restricting scientific research banning the development and commercialization of various products and technologies and limiting citizens access to the fruits of the biotech revolution In this forward looking book Ronald Bailey science writer for Reason magazine argues that the coming biotechnology revolution far from endangering human dignity will liberate human beings to achieve their full potentials by enabling more of us to live flourishing lives free of disease disability and the threat of early death Bailey covers the full range of the coming biotechnology breakthroughs from stem cell research to third world farming from brain enhancing neuropharmaceuticals to designer babies Against critics of these trends who forecast the nightmare society of Huxley s Brave New World Bailey persuasively shows in lucid and well argued prose that the health safety and

ethical concerns raised by worried citizens and policymakers are misplaced Liberation Biology makes a positive optimistic and convincing case that the biotechnology revolution will improve our lives and the future of our children while preserving and enhancing the natural environment
