Answering for Integrated Information Systems Felix Naumann,2003-07-31 The Internet and the World Wide Web WWW are becoming more and more important in our highly interconnected world as more and more data and information is made available for online access Many individuals and governmental commercial cultural and scientific organizations increasingly depend on information sources that can be accessed and queried over the Web For example accessing flight schedules or retrieving stock information has become common practice in today's world When accessing this data many people assume that the information accessed is accurate and that the data source can be accessed reliably These two examples clearly demonstrate that not only the information content is important the information about the quality of the data becomes an even more crucial and critical aspect for individuals and organizations when they make plans or take decisions based on the results of their queries More precisely having access to information of known quality becomes critical for the well being and indeed for the functioning of modern industrialized societies Surprisingly despite the urgent need for clear concepts and techniques to judge and value quality and for technology to use such meta information very few scientific results are known and available Few approaches are known to use quality measures for accessing and querying information over the Web Only a limited number of products on the IT market address this burning problem **Multimedia Information Storage and**

Management Soon M. Chung,1996-08-31 Multimedia information systems are quite different from traditional information systems especially in data types modeling delivery and user interface The large size of multimedia data and the high bandwidth requirement of multimedia streams require new storage buffering delivery and networking schemes The presentational nature of multimedia applications requires a proper synchronization between multimedia streams and the composition of multimedia documents in the distributed environment should overcome the heterogeneity of underlying systems This book is edited for undergraduate and graduate students studying multimedia information and applications researchers and developers of various multimedia software and hardware systems multimedia tool developers user interface designers and network protocol designers by including 17 chapters focused on the following major issues Disk scheduling and storage hierarchy Configuration of multimedia servers and buffer management Delivery scheduling for multimedia streams Supporting user interactions Document modeling and temporal modeling of multimedia data Integrated multimedia information system , Groupware: Design, Implementation, and Use Jörg M. The RAND SLAM Program Jacob Alex Klerman,2008 Assessing alternative mixes of active and reserve forces is a crucial defense issue Force structure decisions are made in an inherently uncertain environment Force requirements can vary unpredictably sometimes surging dramatically depending on the types of conflicts that arise The RAND SLAM program is a software application designed to aid military analysts in exploring the inherent trade offs between cost stress and risk in force structure decisions Its unique feature is that it models force requirements stochastically allowing for analysis of requirements that change unpredictably over time This report serves as a user s guide explaining the program s features and interface and guiding the user through example analyses Several of these example analyses examine some of the same force structure decisions as those analyzed with spreadsheet techniques by Lynn E Davis et al in Stretched Thin Army Forces for Sustained Operations thus validating the RAND SLAM results against this previous work The authors also discuss the underlying model for the program including its strengths and limitations and how it might be expanded and improved

Office of the Assistant Secretary of the Army (Civil Works), 2012 *Experimental and Numerical Simulations of Rock Physics* Huaimin Dong, Yihuai Zhang, Weichao Yan, 2025-09-01 Rock physics experiments and numerical simulations are indispensable tools in geology and mineral resources exploration Experiments can provide real data on the

physical properties of rocks while numerical simulations can reproduce these properties and predict behavior under unknown conditions on a computer Understanding the physical properties of rocks is crucial in energy source exploration and development Rock physics experiments can perform various tests on samples under controlled environments These experiments can provide real data on the physical properties In contrast numerical simulations have the advantages of low cost and high flexibility Through numerical simulations the physical properties of rocks can be reproduced on a computer and their behavior under unknown conditions can be predicted Combining rock physics experiments with numerical simulations can provide a more comprehensive understanding of the physical properties of rocks and offer more accurate data support for energy source exploration and development Parallel Processing and Applied Mathematics Roman Wyrzykowski, 2008-05-26 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Parallel Processing and Applied Mathematics PPAM 2007 held in Gdansk Poland in September 2007 The 63 revised full papers of the main conference presented together with 85 revised workshop papers were carefully reviewed and selected from over 250 initial submissions The papers are organized in topical sections on parallel distributed architectures and mobile computing numerical algorithms and parallel numerics parallel and distributed non numerical algorithms environments and tools for as well as applications of parallel distributed grid computing evolutionary computing meta heuristics and neural networks The volume proceeds with the outcome of 11 workshops and minisymposia dealing with novel data formats and algorithms for dense linear algebra computations combinatorial tools for parallel sparse matrix computations grid applications and middleware large scale computations on grids models algorithms and methodologies for grid enabled computing environments scheduling for parallel computing language based parallel programming models performance evaluation of parallel applications on large scale systems parallel computational biology high performance computing for engineering applications and the minisymposium on interval analysis **The Railway Conductor**, 1909
