excessive carbon dioxide emission caused by the developing human civilization but is caused by the gravitational magnetic influences of the Solar System on the rotating Earth as a result of which the outer layer of the Earth's rotates. Being in the move the Earth's coating changes its position relative to the ecliptic plane and along with its movement over surface of the Earth's is the shift of the zones of life giving rainfalls that are stable relative to ecliptic plane. This results in a global economic and social events in the form of regional crises in areas affected by the drought or excessive precipitation. Physical phenomena related to the movement of the Earth's coating and evidence of the occurrence of this phenomenon are presented in the following work. My theory about the movement of the earth's coating is confirmed by the book of Charles Hapgood 1957 entitled *Earth's Shifting Crust* to which the foreword was written by Albert Einstein. https://archive.org/stream/eathsshiftingcru033562mbp/eathsshiftingcru033562mbp_djvu.txt Jakuszowice 27 July 2019 15:10 Bogdan G. From This Green Earth: Essays on Looking Outward Sylvia Engdahl, 2024-05-03. Sylvia Engdahl became fascinated by the idea of space travel in 1946 and has believed since the early 1950s that expansion of our species to other worlds is vital to the preservation of Earth and the future survival of humankind. Many of the essays in this book express her conviction that we should not be discouraged by the public's reluctance to support space activity since all past human progress has been brought about by visionaries who did not have the backing of their contemporaries. The shock of realizing during the moon landings that contact with the vast and perhaps peril-fraught universe is no longer mere fiction dampened the enthusiasm of the majority, but this was a natural reaction comparable to the seventeenth-century people's resistance to the idea that Earth is not as formerly thought safely enclosed within crystal spheres that hold up the celestial bodies. It will pass, and we need have no doubt that generations who come after us will venture forth from this green Earth and find their way to the stars. The following essays are included: *The Once and Future Dream*, *New Thoughts on the 50th Anniversary of the First Moon Landing*, *Breaking Out from Earth's Shell*, *Why Does the History of Outlook Toward Space Matter?*, *Confronting the Universe in the Twenty-First Century*, *Space and Human Survival*, *The Only Sensible Way to Deal with Climate Change*, *Update on the Critical Stage*, *The Far Side of Evil's Relevance Today*, *Space Colonization*, *Faith and Pascal's Wager*, *Why There Will Never Be an Interplanetary War*, *Humankind's Future in the Cosmos*.
