Human-in-the-Loop Robot Control and Learning Luka Peternel, Jan Babič, Erhan Oztop, Tetsunari Inamura, Dingguo Zhang, 2020-01-22 In the past years there has been considerable effort to move robots from industrial environments to our daily lives where they can collaborate and interact with humans to improve our life quality One of the key challenges in this direction is to make a suitable robot control system that can adapt to humans and interactively learn from humans to facilitate the efficient and safe co existence of the two The applications of such robotic systems include service robotics and physical human robot collaboration assistive and rehabilitation robotics semi autonomous cars etc To achieve the goal of integrating robotic systems into these applications several important research directions must be explored One such direction is the study of skill transfer where a human operator's skilled executions are used to obtain an autonomous controller Another important direction is shared control where a robotic controller and humans control the same body tool mechanism car etc Shared control in turn invokes very rich research questions such as co adaptation between the human and the robot where the two agents can benefit from each other's skills or must adapt to each other's behavior to achieve effective cooperative task executions The aim of this Research Topic is to help bridge the gap between the state of the art and above mentioned goals through novel multidisciplinary approaches in human in the loop robot control and learning

**Intelligent Adaptive Systems** Ming Hou, Simon Banbury, Catherine Burns, 2018-10-30 As ubiquitous as the atmosphere intelligent adaptive systems IASs surround us in our daily lives When designed well these systems sense users and their environments so that they can provide support in a manner that is not only responsive to the evolving situation but unnoticed by the user A synthesis of recent research and developments on IASs from the human factors HF and human computer interaction HCI domains Intelligent Adaptive Systems An Interaction Centered Design Perspective provides integrated design guidance and recommendations for researchers and system developers The book explores a recognized lack of integration between the HF and HCI research communities which has led to

inconsistencies between the research approaches adopted and a lack of exploitation of research from one field by the other. The authors integrate theories and methodologies from these domains to provide design recommendations for human machine developers. They then establish design guidance through the review of conceptual frameworks, analytical methodologies and design processes for intelligent adaptive systems. The book draws on case studies from the military, medical and distance learning domains to illustrate intelligent system design, to examine lessons learned. Outlining an interaction centered perspective for designing an IAS, the book details methodologies for understanding human work in complex environments and offers understanding about why and how optimizing human machine interaction should be central to the design of IASs. The authors present an analytical and design methodology as well as an implementation strategy that helps you choose the proper design framework for your needs. *Proceedings*, 1972. Discussing both basic and advanced concepts, *Fundamentals of O-RAN* delivers a comprehensive summary of O-RAN covering its history, architecture, control loops and microservices, i.e. xApps and rApps, security ecosystem. R, for example, by working with an end-to-end O-RAN system using a network slicing functionality where the rApp provides slicing specified policies to the xApp which then allocates the base station's spectrum resources based on the slicing policy to each user belonging to a certain slice. Readers will also gain an understanding of cellular networks, particularly radio access networks, software virtualization and software defined networking concepts and the knowledge needed to design, build and test a 5G O-RAN system. Some of the sample topics explored in *Fundamentals of O-RAN* include RAN evolution from black box 4G RAN to software based and virtualized RAN, vRAN. Components of the O-RAN architecture including SMO, Non-RT RIC, Near-RT RIC, O-CU-CP, O-CU-UP, O-DU, O-RU and O-Cloud. xApp design and prototyping from scratch using open cellular software srsRAN and O-RAN Software Community (OSC) software. Examination of various security dimensions inherent in the O-RAN architecture. Testing and integration covering Open Test and Integration Centers (OTICs), global PlugFests, certification and badging and end-to-end test specifications. Work Groups (WGs) including WG1 to WG11 and focus groups with information on how to obtain WG specifications. *Fundamentals of O-RAN* is an essential reference for the workforce of tomorrow's cellular industry, including graduate students, teachers, researchers, faculty members, engineers and employees involved in the field of wireless networks, especially radio networks.
