Video-to-Video Face Recognition for Low-Quality Surveillance Data Herrmann, Christian,2018-08-03 The availability of video data is an opportunity and a challenge for law enforcement agencies Face recognition methods can play a key role in the automated search for persons in the data This work targets efficient representations of low quality face sequences to enable fast and accurate face search Novel concepts for multi scale analysis dataset augmentation CNN loss function and sequence description lead to improvements over state of the art methods on surveillance video footage   *Low-latency and Robust Peer-to-peer Video Streaming* JeongHun Noh,2010 Peer to peer P2P systems have emerged as a promising and cost effective transport solution for streaming video to a group of users in the Internet In the P2P architecture users not only consume video but also forward it to other users Thus P2P systems scale better than client server systems as users bring resources to the system The challenge is to achieve low latency and robust video dissemination by overcoming a number of adversarial aspects and challenges peer dynamics heterogeneous uplink bandwidth of peers heterogeneous hardware and capabilities of peers and peer wise connection restrictions due to NATs firewalls This dissertation presents Stanford Peer to Peer Multicast SPPM a P2P video streaming system SPPM is designed to achieve low latency and robust streaming by constructing an overlay of multiple complementary trees and dynamically rearranging the position of peers by Active Overlay Management in a distributed fashion Next we extend SPPM for providing playback control to users by time shifted streaming To perform time shifted streaming peers store past portions of video and forward them to other users when requested thereby reducing server load To further alleviate server load we propose fast prefetching by which peers can disseminate content quickly Finally we present a way to accommodate mobile users Video transcoding is often required to adapt video for the mobile users We propose interleaved distributed transcoding IDT which allows a video stream to be transcoded at multiple peers that are more capable than mobile users IDT is shown not only to reduce computation required at a peer but also to achieve higher error resilience in case of peer failure or packet loss   The LITA Guide to No- or Low-Cost Technology Tools for Libraries Breanne A. Kirsch,2018-02-13 The LITA Guide to No or Low Cost Technology Tools for Libraries provides a practical guide on how to find and use technology tools for a variety of purposes in libraries and more broadly in education Each topic showcases two technology tools in detail and discusses additional tools and provides examples of how librarians or educators are using them in libraries and schools Types of tools covered are Video creation tools such as PowToon and Animaker can be used to create animated videos to tell patrons about a new service or teach students about search strategies Screencasts includes tools like Jing or Screencast O Matic which can be used to show how to use a new library database or service Collaboration tools including tools such as Padlet or Lino It can be used for student collaboration or teamwork with colleagues and sharing project ideas quickly and easily Assessment tools such as Quizizz and Kahoot allow for gamified assessment of student or patron knowledge   **Next-Generation Video Coding and Streaming**
