Calow, 2009-06-05 The Handbook of Ecotoxicology provides a readily accessible yet critical collection of information on ecotoxicological testing Now available in a single paperback volume this handbook represents excellent value Part A concentrates on techniques especially those tests used for prediction Thorough descriptions of the main tests are provided followed by critical analyses in terms of ease of handling repeatability and ecological relevance and finally an extensive bibliography citing key documents describing test methods and key papers evaluating them Part B focuses on the toxicants themselves summarising their ecological effects describing ways of predicting effects from physico chemical properties alone and describing and discussing fate models Now available as a single volume in paperback An invaluable reference resource

Handbook of Ecotoxicology David J. Hoffman, Barnett A. Rattner, G. Allen Burton Jr., John Cairns Jr., 2002-11-13 Completely revised and updated with 18 new chapters this second edition includes contributions from over 75 international experts Also a Technical Review Board reviewed all manuscripts for accuracy and currency Focusing on toxic substance and how they affect the ecosystems worldwide the book presents methods for quantifying and measuring ecotoxicological effects in the field and in the lab as well as methods for estimating predicting and modeling in ecotoxicology studies This is the definitive reference for students researchers consultants and other professionals in the environmental sciences toxicology chemistry biology and ecology in academia industry and government **Handbook of Chemical Risk Assessment** Ronald Eisler, 2000-04-12 Written over a period of 17 years the Handbook of Chemical Risk Assessment exhaustively examines and analyzes the world literature on chemicals entering the environment from human activities The three volumes cover chemicals recommended by environmental specialists of the U S Fish and Wildlife Service and other resource managers The choices were based on the real or potential impact of each contaminant and on the knowledge available about their mitigation The information for each chemical includes source and use physical chemical and metabolic properties concentrations in field collections of abiotic materials and living organisms deficiency effects lethal and sublethal effects and proposed regulatory criteria for the protection of human health and sensitive natural resources Each chapter selectively reviews and synthesizes the technical literature on a specific priority contaminant and its effects on the environment Successful risk assessment relies heavily on extensive and well documented databases They often include too much or too little information about too many chemicals Of the hundreds of thousands of chemicals discharged into the environment only
