MAS **World Class Manufacturing** Richard J. Schonberger, 2008-06-30 In his best selling book Japanese Manufacturing Techniques Richard J Schonberger revolutionized American manufacturing theory and more important practice In that breakthrough book he revealed that Japanese manufacturing excellence was not culturally bound Offering the first demystified explanation of the simple techniques that fueled Japan s industrial success he demonstrated how the same methods could be put to work as effectively in U S plants Now in World Class Manufacturing Schonberger returns to tell the success stories of nearly 100 American corporations including Hewlett Packard Harley Davidson General Motors Honeywell and Uniroyal that have adopted the famed just in time production and total quality control strategies Based on his firsthand experience as a major consultant to American industry he examines how they did it and illustrates how the same concrete specific steps used by these top companies can be implemented in any factory today What s more Schonberger shows that his bold concepts and reforms apply equally to all industries whether the product is computers pasta or trucks and to all divisions from manufacturing and engineering to accounting and marketing According to Schonberger world class manufacturing depends on blended management rather than domination by a separate group of managers which marshalls resources for continual rapid improvement To achieve world class status companies must change procedures and concepts which in turn leads to recasting relations among suppliers purchasers producers and customers Acknowledging the difficulty inherent in such changes Schonberger stresses that employee involvement and interaction both on the shop floor and in the decision making problem solving process is key Wary of those who view improvement in terms of modernizing equipment he points out that making maximum use of people

and current machinery is a company's first priority automation if necessary should come much later World Class Manufacturing also includes Schonberger's 17 point action agenda to guide innovators toward manufacturing excellence from getting to know the customer to cutting the number of suppliers reducing error in production and deciding when and how to automate Indispensable for all manufacturing innovators who aim to keep ahead of the competition this inspiring groundbreaking volume does much more than just recommend or theorize about the new manufacturing approach Plainly realistically and logically it explains how it's done *Advances in Production Management Systems. Reorganizing the Factory Nancy Hyer, Urban Wemmerlov, 2001-10-22. Winner of the 2003 Shingo Prize. Reorganizing work processes into cells has helped many organizations streamline operations, shorten lead times, increase quality, and lower costs. Cellular manufacturing is a powerful concept that is simple to understand; however, its ultimate success depends on deciding where cells fit into your organization and then applying the know-how to design, implement, and operate them. *Reorganizing the Factory* presents a thoroughly researched and comprehensive life cycle approach to competing through cellular work organizations. It takes you from the basic cell concept and its benefits through the process of justifying, designing, implementing, operating, and improving this new type of work organization in offices and on the factory floor. The book discusses many important technical dimensions, such as factory analysis, cell design, planning, and control systems, and principles for lead time and inventory reduction. However, unique to the literature, it also covers in depth the numerous managerial issues that accompany organizing work into cells. In most implementations, performance measurement, compensation, education, and training, employee involvement, and change management are critically important.

These issues are often overlooked in the planning process yet they can occupy more of the implementation time than do the technical aspects of cells Includes Why do cells improve lead time quality and cost Planning for cell implementation Justifying the move to cells strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing implementing and operating cells Improving and adapting existing cells Structured frameworks and checklists to help analysis and decision making Numerous examples of cells in various industries *NIST Special Publication* ,1994 Managing Business Performance Umit S.
