Research and the Quality of

Science Education Kerst Boersma, Martin Goedhart, Onno de Jong, Harrie Eijkelhof, 2006-02-23 In August 2003 over 400 researchers in the field of science education from all over the world met at the 4th ESERA conference in Noordwijkerhout The Netherlands During the conference 300 papers about actual issues in the field such as the learning of scientific concepts and skills scientific literacy informal science learning science teacher education modeling in science education were presented The book contains 40 of the most outstanding papers presented during the conference These papers reflect the quality and variety of the conference and represent the state of the art in the field of research in science education

Facing the Consequences W.H. Schmidt, Curtis C. McKnight, Leland S. Cogan, Pamela M. Jakwerth, Richard T. Houang, 2007-05-08 Facing the Consequences presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study TIMSS TIMSS is the most extensive and far reaching cross national comparative study of mathematics and science education ever attempted It includes comparing official curricula textbooks teacher practices and student achievements for many countries from 20 to 50 countries depending on the particular comparison Thousands of official documents and textbooks were analyzed Thousands of teachers principals and other experts responded to survey questionnaires A sample of mathematics teachers in three countries had their lessons videotaped Hundreds of thousands of children in almost 50 countries were tested in mathematics and science This report presents a closer look at US mathematics and science education through careful examination of TIMSS data The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education

Learning From Others Diane Shorrocks-Taylor, Edgar W. Jenkins, 2005-12-20 Diane Shorrocks Taylor School of Education University of Leeds UK In September 1998 a conference was held at the University of Leeds entitled International comparisons of pupil performance issues and policy It was arranged by two groups within the School of Education at the University the newly formed Assessment and Evaluation Unit and the Centre for Studies in Science and Mathematics Education The joint interest in international comparisons of performance had itself arisen from earlier involvement in a follow up study of the 1995 TIMSS work in England reported in a later chapter in this book in which the TIMSS assessment outcomes were studied alongside the outcomes from the National Curriculum testing programme in England Some of the results of this investigation had proved both interesting and challenging so the decision was made to promote wider discussion of some key issues by inviting contributors from all over the world to a meeting the major aims of which were to promote an exploration of the theoretical foundations of international comparative studies of student performance the practical problems of carrying out such studies the appropriateness of the assessment models and

approaches used in international comparisons the role of international comparative studies in raising standards of student performance and how international studies affect the shaping of national policy on education **Many Visions, Many Aims**

W.H. Schmidt,Curtis C. McKnight,S. Raizen,2007-05-08 A Splintered Vision An Investigation of U S Science and Mathematics Education is the US report on the curriculum analysis component of the Third International Mathematics and Science Study TIMSS which was sponsored by the International Association for the Evaluation of Educational Achievement IEA The report summarizes data from the TIMSS curriculum analysis and integrates it with teacher questionnaire data from the US Japan and Germany on science and mathematics topic coverage and instructional practices The authors of A Splintered Vision discuss and provide evidence of the unfocused nature of US mathematics and science curricular intentions textbooks and teacher practices They offer the premise that producers of US textbooks and curriculum guides have attempted to answer calls for curricular reform by adding new content to already existing materials instead of devoting time to restructuring the materials The authors also suggest that US teachers inundated with a myriad of competing visions are attempting to cover all the topics they confront in their resource documents and to meet all the instructional demands placed on them by those with a stake in education In keeping with the incremental assembly line philosophy in American society US teachers also tend to lean toward a piecemeal approach to education The authors speculate on what such practices may mean for the mathematics and science achievement of US students The work is sure to spur discussion among educational researchers policy makers and others concerned about the future of mathematics and science education in the US

Valuing Assessment in Science Education: Pedagogy, Curriculum, Policy Deborah Corrigan, Richard

Gunstone, Alister Jones, 2013-06-05 Assessment is a fundamental issue in research in science education in curriculum development and implementation in science education as well as in science teaching and learning This book takes a broad and deep view of research involving assessment in science education across contexts and cultures from whole countries to individual classrooms and across forms and purposes from assessment in the service of student learning to policy implications of system wide assessment It examines the relationships between assessment measurement and evaluation explores assessment philosophies and practices in relation to curriculum and scientific literacy learning and details the relationships between assessment and science education policy The third in a series Valuing Assessment in Science Education has chapters from a range of international scholars from across the globe and staff from Monash University King's College London and University of Waikato The two previous books in the series examined research relevant to the re emergence of values in science education and teaching across the spectrum of science education as well as across cultural contexts through the professional knowledge of science teaching This third book now moves to examine different aspects of generating understanding about what science is learnt how it is learnt and how it is valued Valuing Assessment in Science Education will appeal to all those with some engagement with and or use of research in science education including research students academics curriculum development agencies assessment authorities and policy makers It will also be of interest to all classroom science teachers who seek to keep abreast of the latest research and development and thinking in their area of professional concern Schooling Across the Globe William H. Schmidt, Richard T. Houang, Leland S. Cogan, Michelle L.

Solorio, 2018-11-22 Schooling matters The authors professional pursuits for over twenty five years have been focused on measuring one key aspect of schooling the curriculum what students are expected to study and what they spend their time studying This documents their conviction that schools and schooling play a vital and defining role in what students know and are able to do with respect to mathematics and science This research examines seventeen international studies of mathematics and science to provide a nuanced comparative education study Whilst including multiple measures of students family and home backgrounds these studies measure the substance of the curriculum students study which has been shown to have a strong relationship with student performance Such studies have demonstrated the interrelatedness of student background and curriculum Student background influences their opportunities to learn and their achievements yet their schooling can have even greater significance **Pursuing excellence : a study of U.S. fourth-grade mathematics and science achievement in international context , Pursuing Excellence ,1998 Attaining Excellence ,1999**

Lessons Learned Tom Loveless, 2008-08-01 Standards for education achievement are under scrutiny throughout the industrial world In this technological age student performance in mathematics is seen as being particularly important For more than four decades international assessments conducted by the International Association for Evaluation of Educational

Achievement IEA have measured how well students are learning mathematics in different countries The latest round of mathematics testing of the Trends in Mathematics and Science Study TIMSS takes place in 2007 Beyond the horse race the rankings that compare nations what have we learned from the wealth of data collected in these assessments How do US math curriculums compare to those used overseas Is the effect of technology in the classroom uniform across nations How do popular math reforms fare abroad Those are some of the critical issues tackled in this important book The authors use the database to address several pressing questions about school policy and educational research For example Ina Mullis and Michael Martin review the major lessons learned over the history of TIMSS testing William Schmidt and Richard T Houang examine whether curricular breadth affects student achievement Jeremy Kilpatrick Vilma Mesa and Finbarr Sloane evaluate American performance in algebra relative to other nations and pinpoint strengths and weaknesses in American students learning of algebra

Studies in Science Education in the Asia-Pacific Region May May Hung Cheng, Alister Jones, Cathy Bunting, 2017-09-13 Consistent with international trends there is an active pursuit of more engaging science education in the Asia Pacific region The aim of this book is to bring together some examples of research being undertaken at a range of levels from studies of curriculum and assessment tools to classroom case studies and investigations into models of teacher professional learning and development While neither a comprehensive nor definitive representation of the work that is being carried out in the region the contributions from China Hong Kong Taiwan Korea Japan Singapore Australia and New Zealand give a taste of some of the issues being explored and the hopes that researchers have of positively influencing the types of science education experienced by school students The purpose of this book is therefore to share contextual information related to science education in the Asia Pacific region as well as offering insights for conducting studies in this region and outlining possible questions for further investigation In addition we anticipate that the specific resources and strategies introduced in this book will provide a useful reference for curriculum developers and science educators when they design school science curricula and science both pre service and in service teacher education programmes The first section of the book examines features of science learners and learning and includes studies investigating the processes associated with science conceptual learning scientific inquiry model construction and students attitudes towards science The second section focuses on teachers and teaching It discusses some more innovative teaching approaches adopted in the region including the use of group work inquiry based instruction developing scientific literacy and the use of questions and analogies The third section reports on initiatives related to assessments and curriculum reform including initiatives associated with school based assessment formative assessment strategies and teacher support
