Mapping Different Geographies Karel Kriz, William Cartwright, Lorenz Hurni, 2010-09-15 This book is the outcome of the work of contributors who participated in the workshop Mapping Different Geographies MDG in February 2010 held in Puchberg am Schneeberg Austria This meeting brought together cartographers artists and geoscientists who research and practice in applications that focus on enhancing communication or develop and evaluate methodologies that provide innovative methods for sharing information The main intention of the workshop was to investigate how different geographies are being mapped and the possibilities for developing new theories and techniques for information design and transfer based on place or location So as to communicate these concepts it was important to appreciate the many contrasting meanings of mapping that were held by workshop participants Also the many and varied viewpoints of what different geographies are were elaborated upon and discussed Therefore as the focus on space and time was embedded within everyone's fields of investigation this was addressed during the workshop This resulted in very engaging discourse which in some cases exposed the restrictions that certain approaches need to consider For participants this proved to be most useful as this allowed them to appreciate the limits and restrictions of their own approach to understanding and representing different geographies As well the workshop also was most helpful as a vehicle for demonstrating the common ground of interest held by the very diverse areas of endeavour that the workshop participants work within

The Palgrave Handbook on Cyber Diplomacy George Christou, Wilhelm Vosse, Joe Burton, Joachim A. Koops, 2025-11-01 This Handbook offers a state of the art overview and comprehensive analysis of the emerging field of cyber diplomacy During the last twenty years a complex cyber

ecosystem has been emerging that is increasingly challenged at various levels in different domains and by a variety of actors. Core issues range from cyber disinformation warfare and frequent cyberattacks on critical infrastructure to sophisticated cybercriminals penetrating systems for income or simply securing rights online. Such challenges are not only of a strictly technical nature but have also important social, economic, legal, and geopolitical implications. This broad policy agenda can neither simply be addressed by states alone nor by traditional diplomats that practice or engage in negotiations over securing cyberspace, whether this is in relation to regulations, norms, rules, or indeed technologies that can provide security and preserve fundamental rights and freedoms on the Internet. Developments in practice and in theory require more complex conceptualisation and understanding of cyber diplomacy of what it is, of who practices it, where and how. The Handbook seeks to contribute to the wider question on how cyber diplomacy might have affected and changed the tools and approaches of diplomacy itself and might influence the study of diplomacy in the future.

Memory, Conflict and New Media Ellen

Rutten, Julie Fedor, Vera Zvereva, 2013-04-12. This book examines the online memory wars in post-Soviet states where political conflicts take the shape of heated debates about the recent past and especially World War II and Soviet socialism. To this day, former socialist states face the challenge of constructing national identities, producing national memories, and relating to the Soviet legacy. Their pasts are principally intertwined; changing readings of history in one country generate fierce reactions in others. In this transnational memory war, digital media form a pivotal discursive space, one that provides speakers with radically new commemorative tools. Uniting contributions by leading scholars in the field, *Memory, Conflict and New Media* is the first book-length publication to analyse how new media serve as a site of political and national identity building in post-socialist states. The book also examines how the construction of online identity is irreversibly affected by thinking about the past in this geopolitical domain. By highlighting post-socialist memory's digital mediations and digital memory's transcultural scope, the volume succeeds in a twofold aim: to deepen and refine both post-socialist memory theory and digital memory studies. This book will be of much interest to students of media studies, post-Soviet studies, Eastern European Politics, memory studies, and International Relations in general.

Cyber War Jens David Ohlin, Kevin Govern, Claire Finkelstein, 2015-03-19

Cyber weapons and cyber warfare have become one of the most dangerous innovations of recent years and a significant threat to national security. Cyber weapons can imperil economic, political, and military systems by a single act or by multifaceted orders of effect with wide-ranging potential consequences. Unlike past forms of warfare circumscribed by centuries of just war tradition and Law of Armed Conflict prohibitions, cyber warfare occupies a particularly ambiguous status in the conventions of the laws of war. Furthermore, cyber attacks put immense pressure on conventional notions of sovereignty and the moral and legal doctrines that were developed to regulate them. This book, written by an unrivalled set of experts, assists in proactively addressing the ethical and legal issues that surround cyber warfare by considering first whether the Laws of Armed Conflict apply to cyberspace just as they do to traditional warfare and second the ethical position

of cyber warfare against the background of our generally recognized moral traditions in armed conflict The book explores these moral and legal issues in three categories First it addresses foundational questions regarding cyber attacks What are they and what does it mean to talk about a cyber war The book presents alternative views concerning whether the laws of war should apply or whether transnational criminal law or some other peacetime framework is more appropriate or if there is a tipping point that enables the laws of war to be used Secondly it examines the key principles of jus in bello to determine how they might be applied to cyber conflicts in particular those of proportionality and necessity It also investigates the distinction between civilian and combatant in this context and studies the level of causation necessary to elicit a response looking at the notion of a proximate cause Finally it analyses the specific operational realities implicated by particular regulatory regimes This book is unmissable reading for anyone interested in the impact of cyber warfare on international law and the laws of war
