Maps And History Constructing Images Of The Past:

Maps and History Jeremy Black,1997 This book the first comprehensive wide ranging account of the historical atlas explores the role development nature of this important reference tool discusses its impact on the presentation of the past

Historical Atlases Walter Goffart,2011-04-15 Today we can walk into any well stocked bookstore or library and find an array of historical atlases The first thorough review of the source material Historical Atlases traces how these collections of maps for history maps whose sole purpose was to illustrate some historical moment or scene came into being Beginning in the sixteenth century and continuing down to the late nineteenth Walter Goffart discusses milestones in the origins of historical atlases as well as individual maps illustrating historical events in alternating paired chapters He focuses on maps of the medieval period because the development of maps for history hinged particularly on portrayals of this segment of the postclassical modern past Goffart concludes the book with a detailed catalogue of more than 700 historical maps and atlases produced from 1570 to 1870 Historical Atlases will immediately take its place as the single most important reference on its subject Historians of cartography medievalists and anyone seriously interested in the role of maps in portraying history will find it invaluable

Visualizing the Past Kathrin Maurer,2013-03-22 Visual media had a decisive impact on how the past was perceived in historicist culture in nineteenth century Germany The panorama photography and book illustrations can portray the past under the auspices of spatiality Research on historicist culture often neglects this dimension of space and concentrates on traditional historicist paradigms such as temporality narrative and teleology By investigating the visual vocabulary of different historicist genres academic historiography illustrated history books historical maps this volume expands an understanding of German historicist culture as a multi medial phenomenon and shows that past is conveyed in spatial forms such as travel locations national and colonial spaces as well as geographical areas Tracing these concepts of historical space this volume demonstrates that the image works as a powerful tool to propagate the ideology of German imperialism in the nineteenth century but also can critically reflect the political agendas of national historicism

Maps and History Jeremy Black,2000-01-01 Explores the role development and nature of the atlas and discusses its impact on the presentation of the past

A History of the World in 12 Maps Jerry Brotton,2013-11-14 A New York Times Bestseller Maps allow the armchair traveler to roam the world the diplomat to argue his points the ruler to administer his country the warrior to plan his campaigns and the propagandist to boost his cause rich and beautiful Wall Street Journal Throughout history maps have been fundamental in shaping our view of the world and our place in it But far from being purely scientific objects maps of the world are unavoidably ideological and subjective intimately bound up with the systems of power and authority of particular times and places Mapmakers do not simply represent the world they construct it out of the ideas of their age In this scintillating book Jerry Brotton examines the significance of 12 maps from the almost mystical representations of ancient history to the satellite derived imagery of today He vividly recreates the environments and circumstances in which each of

the maps was made showing how each conveys a highly individual view of the world Brotton shows how each of his maps both influenced and reflected contemporary events and how by considering it in all its nuances and omissions we can better understand the world that produced it Although the way we map our surroundings is more precise than ever before Brotton argues that maps today are no more definitive or objective than they have ever been Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again A fascinating and panoramic new history of the cartographer s art The Guardian The intellectual background to these images is conveyed with beguiling erudition There is nothing more subversive than a map The Spectator A mesmerizing and beautifully illustrated book The Telegraph Maps and Politics Jeremy Black,2000-12 Do maps accurately and objectively present the information we expect them to portray or are they instead colored by the political purposes of their makers In this lively and well illustrated book Jeremy Black investigates this dangerous territory arguing persuasively that the supposed objectivity of the map making and map using process cannot be divorced from aspects of the politics of representation The Carpathians, the Hutsuls, and Ukraine Anthony J. Amato,2020-12-02 This book examines the relationship between Ukraine s Galician Hutsuls and the Carpathian landscape between 1848 and 1939 The author analyzes the intersections of ecology and culture in the history of the Carpathian Mountains with a focus on the region s economy and biodiversity **Fashioning History R.** Berkhofer,2008-12-08 This book offers historians and aspiring historians a learned absorbing and comprehensive overview of current fashions of method interpretation and meaning in the context of postmodernism that has washed over the historical profession in the last two decades The Landscape of History John Lewis Gaddis,2004 What is history and why should we study it Is there such a thing as historical truth Is history a science One of the most accomplished historians at work today John Lewis Gaddis answers these and other questions in this short witty and humane book The Landscape of History is at once an engaging introduction to the historical method for beginners a powerful reaffirmation of it for practitioners a startling challenge to social scientists and an effective skewering of post modernist claims that we can t know anything at all about the past It will be essential reading for anyone who reads writes teaches or cares about history *The History of Cartography, Volume 6* Mark Monmonier,2015-05-18 For more than thirty years the History of Cartography Project has charted the course for scholarship on cartography bringing together research from a variety of disciplines on the creation dissemination and use of maps Volume 6 Cartography in the Twentieth Century continues this tradition with a groundbreaking survey of the century just ended and a new full color encyclopedic format The twentieth century is a pivotal period in map history The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps Satellite positioning and mobile communications revolutionized wayfinding Mapping evolved as an important tool for coping with complexity organizing knowledge and influencing public opinion in all parts of the globe and at all levels of

society Volume 6 covers these changes comprehensively while thoroughly demonstrating the far reaching effects of maps on science technology and society and vice versa The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images Hundreds of expert contributors provide both original research often based on their own participation in the developments they describe and interpretations of larger trends in cartography Designed for use by both scholars and the general public this definitive volume is a reference work of first resort for all who study and love maps

Early American Cartographies Martin Brückner, 2012-12-01 Maps were at the heart of cultural life in the Americas from before colonization to the formation of modern nation states The fourteen essays in Early American Cartographies examine indigenous and European peoples creation and use of maps to better represent and understand the world they inhabited Drawing from both current historical interpretations and new interdisciplinary perspectives this collection provides diverse approaches to understanding the multilayered exchanges that went into creating cartographic knowledge in and about the Americas In the introduction editor Martin Bruckner provides a critical assessment of the concept of cartography and of the historiography of maps The individual essays then range widely over space and place from the imperial reach of Iberian and British cartography to indigenous conceptualizations including dirty ephemeral maps and star charts to demonstrate that pre nineteenth century American cartography was at once a multiform and multicultural affair This volume not only highlights the collaborative genesis of cartographic knowledge about the early Americas the essays also bring to light original archives and innovative methodologies for investigating spatial relations among peoples in the western hemisphere Taken together the authors reveal the roles of early American cartographies in shaping popular notions of national space informing visual perception animating literary imagination and structuring the political history of Anglo and Ibero America The contributors are Martin Bruckner University of Delaware Michael J Drexler Bucknell University

Spatial Cognition, Spatial Perception Francine L. Dolins, Robert W. Mitchell, 2010-03-25 An analysis of human and non human animals spatial cognitive perceptual and behavioural processes through mapping internal and external spatial knowledge

Maps, Myths, and Men Kirsten A. Seaver, 2004 The Vinland Map first surfaced on the antiquarian market in 1957 and the map's authenticity has been hotly debated ever since in controversies ranging from the anomalous composition of the ink and the map's lack of provenance to a plethora of historical and cartographical riddles Maps Myths and Men is the first work to address the full range of this debate Focusing closely on what the map in fact shows the book contains a critique of the 1965 work The Vinland Map and the Tartar Relation scrutinizes the marketing strategies used in 1957 and covers many aspects of the map that demonstrate it is a modern fake such as literary evidence and several scientific ink analyses performed between 1967 and 2002 The author explains a number of the riddles and provides evidence for both the identity of the mapmaker and the source of the parchment used and she applies current knowledge of medieval Norse culture and exploration to counter widespread misinformation about Norse voyages to North America and about the Norse world picture

Figures of Authority Peter Becker, Rüdiger von Krosigk, 2008 This book is about authority more precisely about figures of authority The editors have put together an international group of renowned scholars to discuss the emergence of modern notions of authority from different angles Modern authority is no longer legitimated by status and social position but rather by institutional affiliation and performance To research the genealogy and intricacies of this kind of authority the chapters in this volume cast a closer look at the various institutional actors on whom authority has been bestowed The authors use a case study approach to look at the instances in which modern authority emerged was ridiculed contested or even failed Taken together the individual contributions shed new light on the intricate relationship between the subjects and their organisations they challenge any Whig historiography of rationalisation and modernisation and they help us to rethink the inter relationship between modern and even postmodern institutional arrangements on the one hand and their subjects on the other

Mappings Denis Cosgrove, 1999-04-01 Mappings explores what mapping has meant in the past and how its meanings have altered How have maps and mapping served to order and represent physical social and imaginative worlds How has the practice of mapping shaped modern seeing and knowing In what ways do contemporary changes in our experience of the world alter the meanings and practice of mapping and vice versa In their diverse expressions maps and the representational processes of mapping have constructed the spaces of modernity since the early Renaissance The map's spatial fixity its capacity to frame control and communicate knowledge through combining image and

text and cartography's increasing claims to scientific authority make mapping at once an instrument and a metaphor for rational understanding of the world. Among the topics the authors investigate are projective and imaginative mappings, mappings of terraqueous spaces, mapping and localism at the chorographic scale, and mapping as personal exploration. With essays by Jerry Brotton, Paul Carter, Michael Charlesworth, James Corner, Wystan Curnow, Christian Jacob, Luciana de Lima Martins, David Matless, Armand Mattelart, Lucia Nuti, and Alessandro Scafi.

Rhumb Lines and Map Wars Mark Monmonier, 2010-11-15. In *Rhumb Lines and Map Wars*, Mark Monmonier offers an insightful, richly illustrated account of the controversies surrounding Flemish cartographer Gerard Mercator's legacy. He takes us back to 1569 when Mercator announced a clever method of portraying the earth on a flat surface, creating the first projection to take into account the earth's roundness. As Monmonier shows, mariners benefited most from Mercator's projection, which allowed for easy navigation of the high seas with rhumb lines—clear-cut routes with a constant compass bearing for true direction. But the projection's popularity among nineteenth-century sailors led to its overuse, often in inappropriate, non-navigational ways for wall maps, world atlases, and geopolitical propaganda. Because it distorts the proportionate size of countries, the Mercator map was criticized for inflating Europe and North America in a promotion of colonialism. In 1974, German historian Arno Peters proffered his own map, on which countries were ostensibly drawn in true proportion to one another. In the ensuing map wars of the 1970s and 1980s, these dueling projections vied for public support with varying degrees of success. Widely acclaimed for his accessible, intelligent books on maps and mapping, Monmonier here examines the uses and limitations of one of cartography's most significant innovations. With informed skepticism, he offers insightful interpretations of why well-intentioned clerics and development advocates rallied around the Peters projection, which flagrantly distorted the shape of Third World nations; why journalists covering the controversy ignored alternative world maps and other key issues; and how a few postmodern writers defended the Peters worldview with a self-serving overstatement of the power of maps. *Rhumb Lines and Map Wars* is vintage Monmonier: historically rich, beautifully written, and fully engaged with the issues of our time.

The Golden Age of Data Visualization Kim Marriott, 2024-09-04. We are living in the Golden Age of Data Visualization. The COVID-19 pandemic has demonstrated how we increasingly use data visualizations to make sense of the world. Business analysts fill their presentations with charts; journalists use infographics to engage their readers; we rely on the dials and gauges on our household appliances; and we use mapping apps on our smartphones to find our way. This book explains how and why this has happened. It details the evolution of information graphics, the kinds of graphics at the core of data visualization: maps, diagrams, charts, scientific and medical images, from prehistory to the present day. It explains how the cultural context, production and presentation technologies, and data availability have shaped the history of data visualization. It considers the perceptual and cognitive reasons why data visualization is so effective and explores the little-known world of tactile graphics, raised-line drawings used by people who are blind. The book also investigates the way visualization has

shaped our modern world The European Renaissance and the Scientific Revolution relied on maps and technical and scientific drawings and graphics influence how we think about abstract concepts like time and social connection This book is written for data visualization researchers and professionals and anyone interested in data visualization and the way we use graphics to understand and think about the world **100 Maps** John O. E. Clark, 2005 Presents a chronological overview of the history of cartography from the earliest maps of prehistory to the engraved maps of the seventeenth century and beyond Includes illustrations **Mapping the Nation** Susan Schulten, 2020-03-04 A compelling read that reveals how maps became informational tools charting everything from epidemics to slavery Journal of American History In the nineteenth century Americans began to use maps in radically new ways For the first time medical men mapped diseases to understand and prevent epidemics natural scientists mapped climate and rainfall to uncover weather patterns educators mapped the past to foster national loyalty among students and Northerners mapped slavery to assess the power of the South After the Civil War federal agencies embraced statistical and thematic mapping in order to profile the ethnic racial economic moral and physical attributes of a reunified nation By the end of the century Congress had authorized a national archive of maps an explicit recognition that old maps were not relics to be discarded but unique records of the nation s past All of these experiments involved the realization that maps were not just illustrations of data but visual tools that were uniquely equipped to convey complex ideas and information In Mapping the Nation Susan Schulten charts how maps of epidemic disease slavery census statistics the environment and the past demonstrated the analytical potential of cartography and in the process transformed the very meaning of a map Today statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically Whether for urban planning public health marketing or political strategy maps have become everyday tools of social organization governance and economics The world we inhabit saturated with maps and graphic information grew out of this sea change in spatial thought and representation in the nineteenth century when Americans learned to see themselves and their nation in new dimensions
